■ **Course Average(COR AVG):** This is the average of the total responses for this course. For example, for Studio IV, out of total 32 students 28 have responded, the Average represents the mean of all 28 responses.

■ **Individual Average(IND AVG):** This is the average score of the total responses for this instructor. For example, for Studio IV, out of total 32 students 28 have responded, the Average represents the mean of all 28 responses.

■ **Faculty Average(FAC AVG):** This is the average of all responses for similar course type within the Faculty. For example, Faculty average of Studio IV offered by FA, represents the mean of all responses for Studio courses offered in FA during the given semester.

Scale: 1-3: Unsatisfactory, 4-6: Average, 7-8: Good, 9: Very Good, 10: Excellent

What did you like best about this course?

Sr No.	Comments
1	Rather than sticking to pen and paper, this semester's exercises allow for digital approaches wherever possible and appropriate. This seems necessary for L2 and higher as most work is digital and only ideation or basic work requires hand skills
2	Freedom for us to explore on our own
3	-
4	The best part about the course was the freedom to explore our ideas
5	This course allowed me to explore new topics, materials and mediums which was challenging and helped me work on honing my skills.
6	The way the whole course is designed starting from teaching us different techniques on drawing sketching, drafting and ending the course with letting us choose how to represent a certain thought using any medium showed us the importance of the process and how to choose a correct medium for representation.
7	all exercises
8	The freedom to choose our medium of representation in the exercises of the second semester allowed us to make our work very unique.
9	Mostly
10	The two-week exercises formed a good system, with different units working on different exercises simultaneously.
11	I was able to do work on my own.
12	The curriculum
13	The combination of different exercises that made me explore new set of skills of mine.
14	The hands on workshop was very interesting
15	New things constantly
16	Each exercise in the course had one or the other skill to offer which are basic skills required in any design field.
17	It pushed our creative boundaries and forced us to think out of the box
18	The field Work is best about this course
19	The course paved a way for me to acquire the basic fundamental skills in design.
20	The exercises focussed more on creativity and hence i was able to build skills like sketching and learnt different mediums in colouring as well.
21	The hands - on exercises that we did during the spring semester was good. It helped me create a balance and interest through the exercise.
22	The course was designed very nicely.
23	the overall of the curriculum of the course, skill development is up to the mark..
24	foundation programme help to increase my skills and ability for the further levels and life time uses. The course exercises are very helpful.
25	The course was very interesting and allowed me to show my creative side and enhance critical thinking.
26	About the spring semester, I liked most is the Bhuj workshop that helped to develop an understanding of the new construction techniques.
27	The workshop offered were excellent. The topics covered in the workshop were excellent and taught me subjects I didn't have experience with.
28	All the exercises developed new skills and new understanding. and every exercise is nicely arranged in a manner that develops the starting skills of our further course.
29	I liked the fact that we got to learn a complete set of all rounded skills through very creative modules.
30	Improved our skillset in every aspect
31	There is a focus on basic skills.
32	The best thing about this course is that it focuses on skills that are more helpful in real life rather than just a theoretical study.
33	It was a brief introduction about the skills and the methods that one has to acquire in order to move ahead in the journey of designing things.
34	Teaching assistants are really helpful.
35	The hands on experience enhances the learning outcome
36	The course focused more on the hands on experience and focused less on the theory part. This helped the student learn the skills lot faster than just theory alone.
37	The hands-on experience gave me the opportunity to learn many new skills. Further more, the testing of the structures we made, gave us an idea not only on how to design but also how to improve the design
38	It gave me exposure to various designing fields.
39	Independence to make decisions and learn on our own.
40	It was smooth
41	learning skills
42	The best part of the course was that it was more towards self- learning and designing It focussed enough on how a skill can be acquired for future applications.
43	Everything was very good
44	Diversification of exercises that helps in different fields.
45	It is diverse
46	.
47	We had to work for longer hours and me being very lazy was forced to get out of my comfortzone.
48	Freedom to explore new ideas
49	There was a lot of learning based on hands-on experience.
50	IMAGINATIVE DRAWING
51	The creativity expected and reflected in these exercises actually felt like we were designing.
52	The practical knowledge gained during the course.
53	abcd
54	.
55	I liked the creativity aspect of the last few exercises, I liked the various theory that was taught also.
56	The course was more about practical knowledge and the advantage to use any medium to represent the idea was the best part of all the exercises
57	freedom of creativity

58	the variedness of it
59	The exercises in the second semester kindled our creativity. However the final few exercises like gauging costs felt irrelevant especially since it was introduced as one of the replacement for tadp.
60	-
61	the second sem had quite a lot of hands-on work which i really liked
62	hands on experience, learnt to try out new mediums and skills.
63	The workshop part and the field studies.
64	I like that this semster was practical and hands on experience.
65	Sem 2 was more creative
66	I like the fact that every student had a chance to explore something new and be creative in their own way which eventually led to very fruitful intuitive discussions.
67	The structure of the course
68	What I liked was that I was given multiple oppurtunities to explore my creativity and have been able to explore multiple ideas for each and every excercise.
69	-
70	The courses introduced in this semester were comparitively more interesting.
71	Teaching methods
72	It's a best module for the model making and design for all the kind it's also helpful in practical field.
73	challenging and full of new explorations
74	-
75	The variety of exercises focussed on different aspects of the students' development.
76	All basic knowledge about design, workshop, material and techniques of using all these.
77	The course helped me push my boundaries to produce better work.
78	Everything
79	all the studio faculties and tas were friendly and understanding. they supported me and i understood the exercise very well
80	The best thing about this course is that it covers a wide spectrum of basics of mapping, structures, joineries, etc.
81	What I liked the most about the studio, was how every new exercise taught a new skill and helped me overcome my fears of what I thought I was incapable of, like over the exercises drawing or sketching isn't something that intimidates me now, I learned how to paint by doing poster color as a medium for the first time, starting with something as basic as filling the pixelation blocks to making a painting inspired by an artist. Another thing is joining elements, where all the machinery and tools, which most of us hadn't worked with earlier, but now I learned how to use the workshop without any fear of going wrong or being hurt.
82	process and practical oriented
83	How innovative and fluid it was!
84	Hands on experience was the best thing I felt in this course.
85	I like the different types of exercises
86	The way process helped us obtain fruitful outcomes.
87	No comment.
88	The versatility of excercises as well as the hands on experience
89	The course teaches you rigour to some extent, and teaches you to follow certain protocol which might be necessary for some situations.
90	.
91	Learned new skills and approaches to solving problems
92	The studios towards the end of the year were engaging and interesting.
93	Helped me develop more practocal skills.
94	Na
95	.
96	In the second semester, there were a lot of exercises which involved analysis and hands on work, and not just pencil-paper skill development. The workshop exercises were very helpful especially with developing practical analytical skills.
97	it covered all the nessecary skills required for my higher classes.
98	flexibility in choosing my own topics and themes to work on.
99	hands-on work compared to first semester. less to none group-work allowed for personalisation of work input.
100	The second semester was more creative and helped me understand concepts better and analyse my own mistakes.
101	Having everything in different modules helped.
102	the joining elements exercise
103	the fact it was all practical/field work gave me a certain experience and confidence to work eith respective material.
104	how it covered various aspects like labour, masonry, cost, imaginative skills which are usually neglected. It helped me a lot to understand the process and for a better outcome.
105	The exercises during the course were interesting and intriguing. Most of them were group based which was exciting.
106	That it developed our creative faculties
107	The course had different aspects that made us design, create and learn new possibilities and the existing.
108	The versatility of the course
109	Most studio modules helped me hone skills that I think are relevant to my area of intereset in design. Over the semester, I completed a variety of exercises that I initially thought would not be of much use to me, but the large number of different tasks I had to complete and learn from taught me about multiple skills I would need later in the course and in my career.
110	Good faculty and student interaction
111	Imaginative drawing
112	creative freedom
113	The excercises in the second semester gave more creative freedom and room for exploration of thought process on an individual level.
114	The fluidity this course provided to me while going through the exercises.
115	Exercises were more fun and creative and inclusive of all disciples, unlike the first semester.
116	The exploration of different fields and applying a derivative of other profession's knowledge.
117	The variety of things taught to us
118	I liked the structure of the course and how it was designed
119	challenging

120	The Exercises! Even though they were done in a group, I learned a lot of new things this semester.. especially how to survive when working with other people
121	The hands on experience that we had dring Bhuj, joining elements and testing structures really gave us a good practical understanding of all the concepts instead of just focusing on design.
122	It gave me new experiences and made me interact with different kinds of people.
123	-
124	Everything
125	Shift from technical exercises to more creative ones.
126	The 4 courses that were simultaneously ryn for all 6 units with coordination
127	i really enjoy the second semester, it was fun and excting. I really loved my one month in FT and i learn many things from there. i wish you would continuing to do so. All the other exercise were also great.
128	The best thing about the course was there were all kinds of exercises, both logical and creative which can help student develop skills of different courses. Also, one acknowledges that there is equivalent importance of every work.
129	It increased imaginative skills.
130	Structures exercise
131	Arun Sir
132	Good exposure to skills required by FD and FA. None of FT though.
133	it was quite challenging and there were more practical work.
134	Everything
135	The studio makes one learn new skills and gives them great practical knowledge.
136	Opened opportunities for me to learn real life skills especially on exercises Lehigh include site visits
137	the efficient time given for each exercise
138	It improves skills
139	the desctribing settings and connections with studio modules
140	It was fun and challenging
141	The course helped to analyse the situation and talking out the solution.
142	Practical learnings and applications of theory.
143	-
144	The courses were all very different from each other which helped me develop skills of various sorts from hand drawn to digital representation.
145	I liked how all the modules in the second semester had more creative freedom which was challenging yet interesting at the same time. Plus even the tutors motivated us to bring up our own new ideas and helped us improve over them.
146	I liked the feild we had because it really helped me to gain practical knowledge about building materials
147	-
148	The well explained details
149	No comment
150	The exercises were driven by imaginative ideas
151	The process we had to go through for final outcomes in this sem helped with design solving ability
152	The workshop introductions were the best.
153	It gave us chance to explore our skills
154	the new skills acquired
155	The new assignments helped us build our narrative about many things and helped us acquire new skills and ability to tackle new problems.
156	The course kept me engaged with work day and night. Quite Litrally
157	.
158	The hands on working and tackling problems
159	Through this study, I have gained the ability to draw and understand any structure, shape, and form, which will be very useful for me going forward.
160	Exercise were very skilful and gave us an overall idea of colours
161	The practical method of learning things
162	It really enhances our creative thinking.
163	everything
164	The course was challenging and interesting and gave a clear understanding of the skills acquired.
165	The exercises this semester were diverse yet engaging. The studio sessions where discussions took place amongst peers and faculty helped bring a better understanding of our work and what is expected.
166	the diffrent kind of approaches to complex design problems, which were made easier with process and the diffrent kind of mediams i got to explore during this course ie both digital and hand drawn.
167	The exercises were relevant and taught me new skills.
168	That it had group projects that helped us to be better at group work.
169	I particularly liked that I acquired hands-on experiences with various activities, and consequently, could develop a skillset of my own that would help in many aspects.
170	The workshop taught a lot.
171	hands on experience
172	The practical knowledge given was the best. With working in workshops, Bhuj etc a lot of information was gained.
173	The field studio
174	Removing TADP and adding Cost estimation, Color Theory and Imaginative Drawing was a good idea as they taught some essential skills and were also more interesting and fun than the rest of the modules as they allowed me to explore my creativity more.
175	All the topics in the course we're fantastic!!!
176	Everything is nice
177	opportunity to engage in hands-on creative projects, collaborate with peers, and receive feedback from instructors to improve the design skills.
178	The freedom we get in doing whatever we want in our work.
179	The course covered all the topics that each stream in L2 will deal with, thus providing students with some basic knowledge and understanding of what is taught across faculties.
180	Got to explore different mediums.
181	The overall distribution of the syllabus
182	The hands on experience of it, especially the field studio.

183	The challenging part. It helped learn a lot of new skills and abilities.
184	The field trip to Bhuj gave a lifetime experience and working in workshop for the first time better than I thought.
185	That we get a detailed explanation of the exercise and its purpose
186	the fact that I learned how to work with different mediums, be it digital or on paper
187	This course enhanced my skills along with making me learn more of them.
188	the new skills acquired
189	As semester 2 was mostly individual work it forced me to make logical choices and develop better ideas
190	This semester had focused more on logics and thinking instead of skill building.
191	The making and testing structures module was a very interesting and helpful module and it helps me learn a lot
192	It challenged my creativity and helped in my growth as a designer
193	This course involved a lot of exercises which required us to actually be present on the streets rather than an enclosed studio space and thus provided the exposure needed for practical understanding which in turn opened our minds to so many new things.
194	The studio this semester was very interesting and engaging. We could learn a lot of new and key objects of design. The imaginative drawing was the most learnable and creative exercise of this semester.
195	everything
196	GOOD
197	The courses were well constructed and outlined. It helped me understand and develop my skill sets.
198	Everything
199	It improved my creative side and enhanced my skills in art.
200	It did help me in developing my visual skills.
201	no comment
202	joining elements module was the greatest because it was something out of my comfort zone; my fear of operating those large machines is now gone.
203	Great opportunities
204	NA
205	that it helped everyone to develop one or the other skill to be practical enough to handle situations.
206	clear understanding of the basics

What would you like to change about the course?

Sr No.	Comments
1	None in particular. I am satisfied with how the course has been set.
2	nothing
3	-
4	The balance between technical and creative skill
5	More technical exercises could have been included. A lot of the individual exercises were subjective.
6	I would really recommend to cancel the exams for the upcoming batches and would rather suggest a more intense jury on major exercises like Mapping or Making and testing structures etc.
7	nothing
8	The estimating costs exercise seemed very pointless, its objectives were pretty unclear about whether it was about infographic design or collecting statistical data accurately. One week was also insufficient time to complete it satisfactorily. Learning outcomes were very limited from this exercise.
9	Nothing much
10	TADP should have been incorporated, in some way or another. The exclusion has left us unprepared for L2 studios.
11	The course was not at all for the students of all the courses. The course needs to focus on the individual courses which the students will pursue further.
12	Include TADP
13	.
14	We were quite restricted while making the Bhuj booklet
15	How fast paced it is
16	I think the course should have one basic design problem for architecture students as it will take them through a process which is extremely necessary. Other than that it is a well structured course.
17	no comments
18	Nothing
19	More creative freedom should be given to students.
20	More exercises that can use digital medium representation.
21	The removal of the last exercise - TADP was not good. I suggest no matter whatever the situation is such designing exercises should not be removed.
22	I would like to change last 3 exercises and would like to bring TADP back.
23	Overall the course is good for developing the skillset of one... but for the last 3 modules it is a great choice to adapt the TADP in terms which gives a sense of where to start and most important how to start a design problem. although the imaginative and colour theory is okay but I think gauging cost is of no need especially in replacement of TADP.. and I think the colour theory and imaginative should be shifted and mixed in some other exercise.
24	There is nothing about the course to change. One thing the sketching exercise I think add in the course.
25	No comments
26	.
27	I didn't like the last exercises which were imaginative drawing, estimating and costing and colour theory. They didn't come up as helpful as I expected them to be.
28	No suggestion
29	NIL
30	If skills from other design courses like interior design, product design could be included more.
31	The duration of the exercises.
32	One thing I would suggest to change about this course is that the timeline for each exercise should be more so that students can work on improving the quality of outcome.
33	The time for some exercises were not sufficient to gather the information, understand them and then implement it fully in our own exercises.
34	TADP should have been included.
35	Please bring back TADP, I feel it is a must for a smooth transition to L2
36	TADP shouldn't have been canceled. Instead of bringing the three exercises, they should have brought a design problem that caters to the needs of each

37	field, i.e., architecture students design a building, product students design a product and so on. More equally distributed courses for all faculties and preferably not many changes in the course Calendar during the year
38	I feel like CFP should only be there for the first semester and in second semester the units should be divided faculty wise where different exercises should be taught to different faculties because a few exercises were irrelevant to some faculties.
39	Shorter modules. Too long modules get uninteresting
40	Last 3 modules
41	nothing
42	There could have been more exercises relevant to the upcoming years so that the students can get enough prepared and become sure about their course opted.
43	no changes
44	Bring back TADP instead of the last 3 exercises.
45	Introduce more courses which allow the student to think creatively. TADP is a must
46	.
47	some exercises like mapping was not required to be done by everybody.
48	It would have been better if we had more time to think through our ideas
49	The theory part was little confusing and could be explained in more detail.
50	COLOUR THEORY
51	Would want the first sem to include a more creative part and this sem to include a little more technical aspects. And more data relying on digital representation to be better in the same.
52	It would be great if the students get the opportunity to have TADP in the course.
53	efgh
54	.
55	I would like if there were more problem solving type of exercises were we have to apply critical thinking and come up with design solutions. I would also appreciate a little more theoretical work. More life like situations and problems.
56	The course can have more relevant exercise to the faculty of every student
57	don't have freehand drawing at first
58	time frames of each
59	Re- introducing tadp, atleast for architecture students or a similar exercise would really help us prepare better for the subsequent studios. The 6 hours of studio time on some of the days turned out to be very unproductive and the same hours spent outside of studio would allow us to get more work done. Reducing the number of hours under supervision of tutors and keeping short but effective discussions can increase the efficiency of the course.
60	-
61	instead of the last three exercises (colour theory, cost estimation and imaginative drawing), we could have TADP
62	Should have included TADP
63	Last three exercises because they are only beneficial for the product design students and what about other students.
64	I feel a lot of importance was given to the last three modules of colour theory, imaginative drawing and cost estimation than required with the jury.
65	None
66	Maybe the submission time can be changed to Saturday morning for most exercises than Saturday evening as half the weekend is taken away by the submission leaving the students with not enough energy or time to enjoy and relax in the weekends.
67	Bring back TADP
68	The only thing I would like to change is for the end sem jury to enunciate the work done throughout the semester and not just the past 3 exercises as it gives a more wider spectrum about a students work.
69	-
70	The time frame given for each exercise can be slightly higher, providing for time for a better process and outcome.
71	No
72	Please allowing student to select there partners in group excises.
73	The timetable is too tight, there must be more days for a breather between each exercise
74	-
75	The lack of feedback after submissions.
76	There should not be a studio exam because there are many questions in which the student gets confused and doesn't understand that the question has been solved and mostly there are different perspectives of all the topics, so according to their place, there are two truths. It may be that due to the set of answers, the answers of both of them are wrong due to which the students get demotivated and there is a rate in the mind.
77	Not any.
78	Nothing
79	nothing much just the TADP should not be removed
80	The basics of design and the process of designing should be included in the course.
81	This may not be exactly about the course, but the flexibility given to work, as in group exercises working together with your peers at the studio is essential, but the last three exercises, given they were individual, we could be given some flexibility to choose to work at home as long as it doesn't affect our attendance. The most important reason I would prefer to work at home after getting a proper discussion from the faculty is because of the extreme heat in the studios which doesn't even allow me to work productively and ends up wasting time.
82	nothing
83	Teach the basic concepts like sketching and rendering in a more clear manner.
84	Better exercises, design problems could be introduced.
85	I don't think anything
86	Maybe the duration of the exercises
87	Make the modules less disconnected from each other.
88	The inclusion of a department specific TADP would have been quite useful
89	The amount of brain one needs to apply is significantly low, that needs to be seriously worked upon. There's no actual learning throughout the course if design education is taken into consideration.
90	.
91	Give more time to each exercise, the duration of each was very short for the amount of work required.
92	The final Jury should not have been based on the three most subjective modules of the semester. It did not give us an understanding of how jury is actually conducted due to the nature of the exercises being discussed.
93	No comment
94	Na

95	
96	More time should have been allotted to the Digital Representation exercise, especially while introducing as new software. For example, the software Rhino was introduced this semester but only one day - that is only 6 hours of learning were allotted to learn the basics of a whole new software. I dont think this is enough, because a lot of people find it hard to get used to softwares. Moreover, Rhino being a software of great importance in the upcoming semesters should've been taught with more time in hand. This semester, 4 days were allotted to revise AutoCAD which was taught in the previous semester, but only one day to learn a new software - this did not make much sense.
97	the course always felt like its more favoring towards the architecture students which puts other students like product design into a little disadvantage. The course should focus more on the foundation skills or something which everyone can be benifited through.
98	expectations regarding work should be explained more clearly. There were times when the brief for the exercise changed midway, or wasnt communicated to us clearly- for example during artists composition.
99	greatly architecture heavy. understood that the university started as an arhitecture college, but it WILL NOT move forward and grow bigger in it's name if no efforts are put into developing skills for students of other faculties (departments). I understand that i am just a student, but no feedback will be greater than that of a student who has been put through the rigor of a programme, worth mentioning, the rigor is just the perfect amount, and does not overwork any student.
100	I would want faculties to be more aware of the expectations of the course. The faculties in my subunit would always disagree on the fundamental essence of the exercise and students would feel clueless. The faculties individually are very experienced in their respective fields but they had a lot of disagreements and one couldn't understand what was expected of us.
101	More consistency throughout Units.
102	nothing really except the duration which i thought got too cramped due to covid
103	mapping was the only out of place exercise, so moving it to the firt sem along with colour theory, cost estimation and imaginative.
104	-
105	The course was nicely designed to improve the overall skill set of the student. But I would have liked if there were more exercises which taught new softwares. I wished the digital representation exercise to be longer with more in depth teaching of the softwares.
106	Maybe get people to do more on site works with trips and all.
107	The course can focus more on to develop skills that will help us in further years
108	None
109	In both semesters of CFP, I found that the majority of exercises were rushed. Although I did not have to leave any submission incomplete, the deadlines of each module restricted the time I had to explore the mediums and techniques I had chosen. Often, the exercises were very interesting but I could not really go through a comprehensive process to arrive at my desired outcome, since the submission deadline would give us only a couple of days to, say, compile and represent our ideas. This became discouraging when I found the exercise engaging but had very little time to learn necessary softwares and techniques, and put them to use.
110	Na
111	mapping for bdes
112	nothing, it is helpful as it is
113	More software exploration (the digital representation was not enough for students to properly grasp the softwares)
114	The group exercises. I would like to change the group exercises to the personal invdual exercises.
115	nothing.
116	Bit more clarity in the gauging costs exercise would be really helpful.
117	The time allotted to each exercise seemed too less and too much importance was given to the process rather than the final outcome
118	I would have liked the course better if we had a shift in classes between the semesters as we would have interacted with more students
119	integration of more design oriented modules
120	no
121	The faculty should be more on point, and shouldnt give vague and ambiguos feedback. This makes us as students confused and does not allow us to bring out the full potential of our work. There are 3 faculties and 3 TA's and all of them have their own individual opinions and come and tell us that.
122	As I had opted product design, I often felt the course was too focused to fit the needs of architecture students. The course could have been more general.
123	-
124	Nothing specifically
125	More openness to different ideas.
126	It is intensively architectural
127	maybe ft students should have give jury on last three modules. If it possible it would be great to give jury on our one month work in Ft.
128	I felt that there were major exercises related architecture and technology which can be converted to equal number of exercises for each field.
129	Colour theory since it is not important for the FT students.
130	should not remove TADP
131	Introduce more modules which involves practical knowledge
132	This course is NOT AT ALL helpful for students of FT. Most of the modules won't be of any help for me in the following years. Most of the modules are designed to help students of design and architecture and severely lacks technical knowledge. I would like addition of modules pertaining to Technology or a different foundation pattern for Technology students. We have been observing a decline in number of students enrolling in FT and this is one of the biggest reasons as to why it has been happening. We lack drawing and sketching skills as we took JEE test whereas students of other faculty have been drawing/sketching for their NATA or UCEED exams and they have a one up on us and since we lack such skills many times we are trolled. Putting in hard work in a field or subject which would be actually helpful to us could still be fuelled by motivation but I genuinely felt helpless whilst working on the modules knowing none of it would be applicable in my field and I do not think I have gained any skill or knowledge that would be helpful for me. Really disheartened when I look back at what I did throughout the year and think I could have learnt more useful skills or gained knowledge which would be useful to me. Kindly look positively to restructure the course.
133	Worst part was the imaginative drawing
134	I guess its helpful for ft students but not all exercises, so kindly take a note on it
135	The studio included many exercises that demanded skills like drawing, sketching, and painting. Being an FT student we don't know about it and it is irrelevant to our field of study.
136	Exercises like Colour theory and gauging costs should have given lesser prominence than other useful and important modules
137	the tutors were very partial among students.as these exercises were very subjective they did not gave grades to some students as they didnt consider it to be good without seeing the efforts put in it.
138	Nothing
139	tired of APA citations
140	Would be better if we went at our own pace rather than having deadlines for process sheets
141	The time limit given for it should be sufficient.
142	N.A.
143	-

144	The faculties could have been more sure of what the intent of each module was, because in the modules that were introduced later like the colour theory the faculties had differences in the instructions amongst themselves itself, they didn't know if the representation was supposed to be abstract of an ideation or what.
145	Just a suggestion, like allied module we could introduce few studio exercises that are specifically department oriented.
146	Nothing
147	-
148	The time given to each module must be equally divided
149	No comment
150	Introduce better exercises
151	Including TADP
152	The time dedicated to each exercise is not planned well. The last three excersises are not helpful for every department.
153	duration of each exercise should be improved
154	The timings for each exercises. it became very stressful as all the deadlines were very hectic.
155	The faculties should change in the second semester if the units are not shuffling.
156	More exercise on sketching to improve freehand drawing
157	.
158	The weightage of the modules
159	nothing
160	Nothing
161	the course time for imaginative drawing
162	Nothing
163	TADP should be there for last 1.5 months
164	I would suggest keeping exercises that include skills related to the design field rather than just the whole year being architectural-oriented. That would give growth to students of other faculties.
165	I would have liked to have more individual assignments rather than group projects as sometimes the individual learning process which is personal for everyone sometimes gets lost in the picture.
166	the ammount of time given for estimating cost
167	TADP was an important part
168	To definitely have more holidays otherwise it leads lack of interest in the coruse. Not sure why some exercise like estimating costs and color theory was included. It was just donkey work and unnecessary.
169	I would not change anything about the course, except for maybe changing the order of some of the exercises.
170	Nothing.
171	sometimes its not clear to convey the relevance of the exercise to solve real life problems or scenarios in our respective fields
172	Some other excercise could have been present instead of Ordering principles
173	Bring back TADP
174	In Making and Testing Structures, would be better if we had been given more time to make the model that had to be tested as we could have prepared a more stable model. There was no point in remaking the model after testing just for the sake of submission as it is a waste of time and material. As I understand, the main point of the excercise was to understand why structures fail and not exactly model making. The proposed changes in the model to fix the points where it failed can be shown in a drawing instead of remaking the model. A point to note though is that not all units were made to remake the model after testing, so this is more to do with the decision taken by the unit faculty and not about changing the whole course
175	Nothing
176	No comments
177	The exercises were not outlined appropriately, a lot of work which is non relevant was added extra by the faculty members which was really unnecessary.
178	It is very much architecture oriented and focuses less on exploring the interior design field and that is what i would like to change.
179	I would like this course to permanently remove TADP as an exercise and use the ones used in this semester instead
180	nothing, it was greattt.
181	Bring back TADP
182	The value for creativity detoriates when compared to others.
183	Time given for each module.
184	After every exercise we should get 2 days break so that we can start with fresh mind.
185	Nothing much.
186	the time assigned for the estimating costs exercise.
187	The pattern for the Colour Composition needs to be changed. A prior introduction to the abstract art and basics of it would give us some brief idea of art style.
188	The timings for each exercises. it became very stressfull as all the deadlines were very hectic.
189	The topics being new , few theory classes providing more information about the subjects can help improve overall.
190	TADP should not have been removed insted it should have been incoorporated in a differet way.
191	I think colour theory and imaginative drawing werent a necessary exercise and we couldve done TADP instead
192	The introductory sessions should be more clearer for a better understanding in some exercises and should explain the motive behind it.
193	I would like for the course to be more focussed on the ideas of a student rather than his or her skills in sketching or designing and also since this is the first year, the course could have been a bit less intensive, as students could have done much better if we got more time for an exercise.
194	Everything about the spring semester seemed fine to me. I don't want to change anything.
195	nothiing
196	GOOD
197	The gauging costs exercise should be given more time. More samples should be included in the pdf provided to students at the start of each exercise.
198	Some exercises had less time to be done so i would increase the time
199	nothing
200	If digital medium is not preferred, then don't allow it.
201	no comment
202	i think the exercise which was to create an artist composition was not necessary
203	Nothing
204	NA

295 206	i feel the course could have a perfect balance of exercise for all faculty .

Course Comments

Sr No.	Comments
1	The course covers a large portion of necessary skills for professional practices and higher level studios. I wish there were some tutorials or even exercise which explored model making more and the use of rendering software more. This skill is useful but is not brushed upon more in CFP. Also, many people gather very less from the digital representation exercise and have to rely very heavily on more experienced students and tutors help rather than utilizing these tutorials. More focus on this exercise would help much better in getting better understanding of software.

4	no comments
5	The two week exercises worked the best, it is a good duration for an exercise. It was also very convenient that different exercises were going on in different units simultaneously as we could work more efficiently since the print and stationery shops didn't get crowded. This way, we also got feedback from other units and got more inputs into our exercises based on their experience with them. The exams conducted at the end of this semester made much more sense and were a good way to test us. Please incorporate TADP, it gives us a sense of what is to come in future studios and forms a transition between CFP and L2.
6	It is a great course overall which helps in developing basic skills in students.
7	no comments
8	NA
9	overall, the course and the curriculum designed was good. I would like to thank my studio tutor who helped me acquire every required skill.
10	No comments
11	It seemed like there were not many exercises for the students which could be conducted hence they added exercises which only took time and did not have great outputs. However, the workshops in the course's beginning were extremely useful and interesting.
12	NIL
13	Not much.
14	This course is best designed for person interested in learning practical skills which are more useful in life.
15	Some exercises seemed to have a lot more time compared to others. So instead of giving two weeks to one exercise and giving one week to another i would suggest give one and a half week to such exercise so there students don't run out of time, or don't have much time to spare.
16	I felt that exercises like mapping weren't really helpful to BDes and BID students.
17	None
18	Introduce more courses which allow the student to think creatively. TADP is a must!
19	.
20	There should be less emphasis put on making reports of the trips such as bhuj as the work done in the trip was fun and everyone enjoyed it and no one viewed it from the way of making a report.
21	Very product design oriented.
22	good
23	N/A
24	-
25	great course as a lot of hands on learning was involved as well as a varied range of modules and topics were inculcated.
26	None
27	Sketching exercises must be included in the FA Allied Module as not all students were able to sketch well. And most amongst those who were able to sketch were not fast enough.
28	Overall great course but can do a little with a few exercises such as Deciphering Principles.
29	-
30	No
31	Well design.
32	-
33	Please change the current policy of moving on from an exercise after the submissions are done. Individual discussions and feedback about why students received the final grades they did would make sure that we actually learn and improve moving forward.
34	Not any.
35	It was overall really helpful and helped me grow and enhance my skills. One more thing is, despite color theory and cost estimation being helpful, I would have preferred maybe a condensed version of TADP over imaginative drawing, as TADP involves working with a real and practical scenario, which is something that we would be doing ahead, over imaginative drawing that requires you to create one of your own where everything could be perfect without its problems, which isn't the case in the real world.
36	...
37	TADP would have helped in developing more skills than Imaginative drawing and color theory
38	-
39	.
40	The course was good but very hectic with the limited amount of break.
41	Certain exercises could be modified to accomodate students of all disciplines so the understanding and learning is holistic for everybody.
42	The course could have been more inclusive for students who have picked their specialisation as Product Design. There could be more exercises which are product design based.
43	Instead of completely removing TADP, it could have been something relevant to our specific courses. For example instead of solving a problem for a specific building it could have been a product or an interior space.
44	TADP surely was a simply only architecture exercise. It definitely helped those in the course of B.Des. but again, was a boon for technology students. A separate TADP for each department, like how BCT students had their own thing going on, would be much more beneficial. B.Des. Allied module was of little to no use.
45	Nil
46	i love CEPT and ill miss CFP
47	imaginative drawing could be more like trd1 and 2, the first part including drawing and conceptualizing the idea and the second one making models for the same.
48	course was fun!
49	(As above)

50	Na
51	the sessions were held timely and everything goes nicely its just that the entire course layout should be decided beforehand and should not be changed in between
52	nothing to comment
53	Apart from that, the course was relevant and perfect.
54	None
55	this sem was more interesting as compared to the last sem.
56	no comments
57	-
58	All the second semester course were very good.
59	FT students should not have colour theory exercise.
60	Increase practical work that will give other exposure also.
61	The course mainly focuses on developing design skills and is not relevant to the Technology department.
62	NIL
63	.
64	No comment
65	It is nice in terms of practical learnings and applying the theory in real life.
66	None
67	-
68	Introduce TADP
69	Through this study, I have gained the ability to draw and understand any structure, shape, and form, which will be very useful for me going forward.
70	The first semester included major exercises which were architecture-oriented, in the second half of the second semester, some exercises were introduced which did help students of other faculties in learning the skills they would require, rather than just drafting plans and elevations. Since CFP is supposed to be a foundation year, it should include exercises that help students of all faculties and not just architecture. Involving design students in mapping was unnecessary, similarly, multiple tutors force students to draft plans and elevations for exercises irrespective of their field, if this is a creative college, let students be creative, I feel exercises should be kept shorter like the second semester and include more exercises which will help all students.
71	The course outline enabled me to learn new skills and makes sure that now I have Knowledge about all the different skills that are required in 2nd year.
72	Students are just forced to do the work other than actually build an understanding on the topic atleast for Unit 4. They just care about final submission and not the process of learning. The course exercises needs to be way more relevant for all the other departments also and not just architecture.
73	It would have been better if the studio exercises are more subjective based on our respective individual fields like allied module
74	It was a very nice course, which was better than sem 1 as it had more use of design and practical knowledge
75	This is also a comment more about the tutors than the course but often times the objective of the module and the instructions were not clarified to us as there was a lot of confusion among the faculty themselves. For example in Color Theory where we had to make a composition representing an artist's work, we were told different things at different stages by different faculty. The sub unit faculty said we had to directly pick up objects from the artist's work and make a collage in the artist's color palette and style, but then another faculty said the object had to be our own but the color palette and style had to be of the artist, then they said it had to be abstract shapes and forms (even for landscape artists who don't use abstract shapes) but then in jury we were told the opposite. It was overall quite confusing and while it is true that design is subjective and there's no right or wrong opinion, it would still be beneficial if at least among the unit faculty there was a common consensus that was reached before introducing the module to us and the instructions were made clear from the get go rather than going back and forth.
76	No comments
77	All the faculties are mostly from architecture in cfp which I think should be replaced by faculties from other courses too to get a different opinion.
78	none.
79	Sudden changes in the curriculum can be difficult to handle for students.
80	Very satisfying overall.
81	I have none
82	The second semester was very exciting and interesting I personally like the last three modules of the studio colour theory, gauging costs and imaginative drawing.
83	The course was very enriching and I had fun exploring new areas of design, especially those which gave us a practical experience. It felt like I learned a lot of new things in a very short time, which earlier I believed I couldn't do.
84	The fact that CEPT brought the TADP exercise down was a very good decision. The other exercises, instead of TADP, were also very interesting and useful. Unlike last semester the spring semester had proper time allotted for each of its exercises.
85	need to shuffle a few exercises from sem 1 into sem 2 and some from sem 2 to sem 1
86	Loved this sem !
87	projects helps in developing overall skills
88	no comment
89	NA

What did you like best about this instructor's teaching method / approach?

Sr No.	Comments
1	The instructor had daily goals which ensured that proper work was produced which helped the process.
2	The way he teaches everything makes it easy for us to understand and clearing all the doubts asked at any point of time. He gives us intense feedback on each draft inorder to make the best final outcome possible. Pushes us all and motivates us until we produce the work in the best possible way. Also manages to get the work done on the right time as per the schedule.
3	He encourages students instead of tearing them apart
4	I liked his openness and the honesty to the approach of doing the exercises. I also liked that he didnt try to control the outcome of the students projects. He was open to our own ideas and encouraged many lines of thought. But he also made sure that work was in progress. He is very dynamic and his enthusiasm was very contagious.
5	He made us believe that the process would always lead to the best outcome
6	.
7	.
8	Na
9	That he was open to all the suggestions.
10	His approach and expectations towards the final output is commendable and is strongly passionate about what we learn as students
11	Always willing to help and easy to approach. Goes out of their way to help students. Best instructor a student could ask for.
12	Was always open to new ideas and provided constructive feedback.

13	The effort he put in teaching me were commendable, and his technique of explaining concepts is also something i appreciated the most.
----	---

What would be your suggestions to improve the instructor's teaching?

Sr No.	Comments
1	NA
2	Though the pressure increases sometimes but I really think all those scoldings were neccessary to achieve the work we did.
3	Better communication skills
4	Not many suggestions to be honest. Maybe a little more clarity in the objectives of the exercise.
5	Nothing
6	.
7	.
8	Na
9	He would sometimes be set on what he wanted rather than what we wanted to do.
10	Nothing
11	-
12	none.
13	Nothing
