

Spring Semester, 2020, Faculty of Architecture, CEPT University

Code	AR2025	Course	Building Anti-Building		
Typology	Studio	Credits	14	GPA/NonGPA	GPA

Long Description :

The term 'Anti-Building' was coined by British architect Cedric Price. He challenged the conventional idea behind the building nestled in permanence. The built-forms are usually driven only to attain the defined programmatic outline and exclusivity attained via architect's vision. He believed that building should primarily serve people. They should be able to radically transform and be flexible to meet diverse demands of both the present and the future. His vision of 1960s which was far too advanced for its time and is responsible for many famous of our built-forms (Pompidou center, Greenwich Dome, The shed- New York) that we all cherish and look up to. This unit offers a ground-breaking journey to look at the built-form through a completely different perspective challenging conventions, engaging in creating meaningful transformations of built-form adopting itself to address many diverse demands of its users. The changing perspective of designers of being inclusive creates an exciting challenge. While shaping the built-form for the present and imagined future would ask for individual of their narrative of near or distant future through constructing of pragmatic utopias. The studio unit is a departure from Cedric Prices' views of Anti- Building and will re-interpret the ideas behind the term. Design exercises. Design of a Library. The library as a type has undergone substantial transformation as type in recent past and will change drastically in future. Each perspective of this change may bring diverse possibilities of its core nature. The transformation is open and exciting. .

Learning Outcomes :

After completing the Courses, the student will be able to :

- Challenge the conventional ways to conceive buildings.
- Utilize and evolve tectonics to serve building to be a modifiable entity.
- Visualise scenarios with logical line of thought and future projections
- Produce spatial three-dimensional diagrams for simplification of complex functioning of building indicating flow of people with changing spatial organizations.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	• Discussions with students regarding the relationships established through disparate examples, using ground plane for the advantage of the overall spatial experience.
Week 2	• Discussions with students regarding the relationships established through disparate examples, using ground plane for the advantage of the overall spatial experience.
Week 3	Mobile library- Design a mobile library for 1000 books which can travel places. Towed by a truck, contained in size of 7.5Mx2.5mx2.3m container. To be stationed at one destination for a few days, unfolding as a 'Place for reading'. It folds back and travels again to another location once the designated days for that particular location are over. Materials and details to be conceived towards making of a flexible system to accommodate disparate needs of place and people.

Week 4	Introduction to site, site data collection. Main Site model and Basic site drawings. Individual site interpretations. Through collages and expressive models of site leading to establishing of personalized context
Week 5	Introduction to site, site data collection. Main Site model and Basic site drawings. Individual site interpretations. Through collages and expressive models of site leading to establishing of personalized context
Week 6	Visit to libraries in the city. Discuss and evolve the idea of the anti-building through the articles and works of Architect Cedric Price. ? Visit libraries/ Vocational centres in the city. ? Case studies of library around the world and student presentation of the cases and discussions. ? Faculty conducted debate of the anti-building and contemporary builtforms addressing and adopting the phenomena
Week 7	Concept models and sketches : Introduction of the main Programme Conceptual built form explored through models and sketches, extending the contextual and programmatic understanding. Use individual expressive site Model as a base
Week 8	Programmatic diagrams and models Understand and interpret the idea of anti-building imbibing the program of library and present the unique understanding through a diagrams/model
Week 9	Design Development- Ideas of antibuilding expressed thorough animations and drawings. Convert the conceptual position of Anti-building relationship into refined expression with program allocation and functional relationships established.
Week 10	Design Development- Ideas of antibuilding expressed thorough animations and drawings. Convert the conceptual position of Anti-building relationship into refined expression with program allocation and functional relationships established.
Week 11	Design Development- Ideas of antibuilding expressed thorough animations and drawings. Convert the conceptual position of Anti-building relationship into refined expression with program allocation and functional relationships established.
Week 12	Exercise 7 Three dimensional diagrams Convert programmatic and spatial distribution into a three-dimensional movement/flow diagram to understand the interdependence of functions, various formations and multiplicity of the built-form. 3d-models Computer Generated animations, Graphics. (See attached Examples

Week 13	Exercise 7 Three dimensional diagrams Convert programmatic and spatial distribution into a three-dimensional movement/flow diagram to understand the interdependence of functions, various formations and multiplicity of the built-form. 3d-models Computer Generated animations, Graphics. (See attached Examples
Week 14	Intent Unification. Unison of programmatic requirements and contextual responses. Revisit conceptual intent. Design Development of the proposals. The multiplicity and flexibility of built form, its various stages and usability explained through drawings.
Week 15	Intent Unification. Unison of programmatic requirements and contextual responses. Revisit conceptual intent. Design Development of the proposals. The multiplicity and flexibility of built form, its various stages and usability explained through drawings.
Week 16	Design presentation Presenting the proposals through drawings and models highlighting the ideas of anti-building.

Spring Semester, 2020, Faculty of Design, CEPT University

Code	IR2712	Course	Parametric Design & Digital Fabrication		
Typology	Courses	Credits	2	GPA/NonGPA	GPA

Long Description :

The course intends to explore the potential of parametric design in the field of architecture and interiors using grasshopper as tool for designing. It also intends to understand the different methods of digital fabrication like laser cutting, 3D printing & CNC cutting to achieve the desired form.

Learning Outcomes :

After completing the Courses, the student will be able to :

- Designing a Parametric built form using Grasshopper
- Presentation drawings explaining the design and the various parameters that define the built form
- Digitally fabricated, scaled model of the design

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction to Rhino – Understanding the interface, different commands and its application to achieve various 3d forms.
Week 2	Exercise 1 : Exploring 3d built form using Rhino
Week 3	Introduction to Grasshopper – Understanding the Interface & its application in parametric design
Week 4	Exploring parametric design using grasshopper.
Week 5	Exploring parametric design using grasshopper.
Week 6	Exploring parametric design using grasshopper.
Week 7	Exercise 2: Designing a Parametric form - building, building façade, and pavilion etc. using grasshopper.
Week 8	Exploring parametric design using grasshopper and understanding the different methods of Digital Fabrication and its application.
Week 9	Exercise 3: Finalizing the design, the method of Digital fabrication to be used and making drawings for the same.
Week 10	Exercise 4 : Making a scaled model of the design using Digital Fabrication
Week 11	Class Discussion
Week 12	End Semester Jury
Week 13	a

Week 14	a
Week 15	a
Week 16	a

Spring Semester, 2020, Faculty of Architecture, CEPT University

Code	LA4703	Course	Field Study of Plants		
Typology	Courses	Credits	2	GPA/NonGPA	GPA

Long Description :

This lecture course encourages nature enthusiast students to identify and know more about plants and help them acknowledge the importance that plants play in our environment. The setting is very relevant to the learning experience of existence of plants. The course emphasizes on field visits as a mode of understanding and appreciating plants for their varied physical attributes. Students learn to classify plant materials based on various uses in landscape design and understand in detail, aspects such as shape, form, size, habit, branching pattern, flower, foliage, fruit, growth requirements and seasonal variations including scientific nomenclature. As a part of the course the students will be visiting many gardens, institutional campuses, plant nurseries, botanical gardens and other selected sites with a rich collection of flora in and around the city of Ahmedabad. The course also intends to develop innovative methods of documenting flora.

Learning Outcomes :

After completing the Courses, the student will be able to :

- Recognize distinctive physical attributes and qualities of plants
- Identify plants by its scientific nomenclature
- Formulate flora mapping techniques

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Orientation Session, Field Visit - CEPT Campus and surrounds, Session on Plant blindness
Week 2	Plant classification, Nomenclature, life span, Native flora, adaptations and climatic regions, Appreciation of Plants, Introduction to Assignment 01 - Plant cards
Week 3	Plant Morphology - Leaf - Morphology, Tree habit, Roots, Bark, Flower-Morphology, methods of reproduction, Assignment 02 - Leaf Morphology
Week 4	Field Visit - LAW Garden
Week 5	General discussion session on plants and their physical attributes based on site observations, Lecture - Growing conditions (Soil, Light, Temperature),
Week 6	Special lecture on tree mapping, Introduction and discussion on Assignment 03 - Spring calendar, Quiz 1
Week 7	Field visit - Serenity tree library, introduction to Assignment 04 - Plant toons
Week 8	Field Visit - Flower Park, Sabarmati river front

Week 9	Field visit - Manekbaug Lokvan
Week 10	Quiz 2, Prefinal discussion on Assignment 03 -Spring Calendar Assignment 04 - Plant toons -discussion
Week 11	Field Visit - Plant nursery
Week 12	Assignment 04 presentation - Plant toons - Life of plants, Landscape Values, , Basic ideas of planting, Concluding session
Week 13	Session over
Week 14	Session over
Week 15	Session over
Week 16	Session over

Summer Semester, 2020, Faculty of Management, CEPT University

Code	OS20FM001	Course	Cities, Covid and Technology		
Typology	-	Credits	2	GPA/NonGPA	NonGPA

Long Description :

A pandemic is generally defined as a new disease that rapidly spreads in a number of countries and continents. Cities across the globe, accounting for about 55% of the world's population are faced with managing the Novel Coronavirus (Covid-19), the most recent pandemic that has resulted in unprecedented social and economic impact on society. From understanding concepts like Open data, Internet of Things, Artificial Intelligence, Integrated Control Command Centres (or War Rooms), Drones etc, this course explores how cities around the world and in India are using technology as a tool to tackle various aspects of the disaster, namely the covid-19 pandemic. The course will also explore the impact of the pandemic on areas like education, businesses etc and the use of technology in these areas to mitigate this impact. The use of technology in combating the pandemic may also curtail human freedom, raise ethical questions and bring about security challenges, which will be discussed in the course. The output of the course would be an understanding of how different technologies are used in different cities, countries to mitigate the disaster.

Daily Plan & Assessment :

Days	Exercise Description
Day 1	Introduction to Cities and Disasters with a focus on the Covid Pandemic in the world and India. Getting to know the participants, the status of Covid in the Cities/Towns they come from. Understanding Open data, MyGov and Smart Cities in India.
Day 2	Understanding Smart City Integrated Control Command Centres (ICCC), now the War Rooms in the context of Covid in India. A brief on technologies like Internet of Things (IoT), Artificial Intelligence, Big data and their use in cities.
Day 3	Managing Covid – Internationally & in India. Various technologies being used like technologies for surveillance and identification of infected - CCTV, ANPR, cameras; drones, Contact Tracing Apps like Aarogya Setu, Quarantine Movement
Day 4	Explore the impact of the pandemic on areas like education, businesses etc and the use of technology in these areas to mitigate this impact. The use of technology in combating the pandemic may also curtail human freedom, raise ethical questions and bring about security challenges - a discussion
Day 5	Identification, Discussions and allocation of the final case-studies/topics. Submission booklet formats, layouts etc to be finalized.
Day 6	Work on Assignments
Day 7	Final Presentation on assigned case studies/topics
Day 8	Final Submission after updations & verifications
