

Monsoon Semester, 2016, Faculty of Architecture, CEPT University

Code	1005-N	Course	Vertical Studio -Building in an Urban Setting		
Typology	Studio	Credits	8	GPA/NonGPA	NonGPA

Long Description :

Architecture plays an important role in shaping the character of our cities, our streets and the urban experience. Building types engage with the public realm in many different ways, and the nature of this relationship between public and private realms has evolved over time. This studio will focus on the design exploration of an institutional building in an urban setting, and its response to the public realm.

Monsoon Semester, 2016, Faculty of Architecture, CEPT University

Code	1012	Course	Building Systems and Services		
Typology	Lecture	Credits	4	GPA/NonGPA	NonGPA

Long Description :

• To understand the concepts of plumbing, waste water recycling and rainwater harvesting for buildings. • To understand the concepts of water management and conservation of resource in larger context of built form. I) HVAC: Heating, Ventilation and Air conditioning services in Buildings: The special applications of Pharma, Hospitals, Textile Mills, Malls, Engg., Infra projects will be covered. Students will be familiarized with basic type of systems, heat load calculations, duct and pipe design, system components etc. BMS planning II) Vertical Transportation: (Lifts and Escalators): Types of Elevators, their sizing, to find number of Elevators for given application, traffic flow in building, provision in building, IS code, study of manufacturers plans and incorporation in building design suitably. III) Fire Protection and Alarm systems: Provisions of Fire safety in High Rise buildings as per local Municipal bye laws, different types of systems like Hydrant, Sprinklers, Gas suppression, detectors, smoke evacuation in basement areas of large buildings, alarm system etc. Residential, Commercial and Industrial buildings will be covered. IV) Electrical Power distribution for LT and HT Power supply in buildings. Planning of substation, cable ducts, bus ducts, earthing installation etc. with reference to Building Design for Commercial and Industrial complexes. V) Green Building concepts with LEED and GRIHA certification. VI) Basic concept: How to incorporate these Building Services components in Building design from conceptual stage till execution in such a manner that Building functioning is not compromised and aesthetic aspects are taken care well. Architect being in the center of the Project has to get involved with client, contractors and various consultants at different times and be an effective leader. Site visit to running project will be planned to familiarize students with Services components.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Water as a natural resource and concepts watershed and hydrological cycle of water
Week 2	Water sources, quality, water infrastructure as centralized vs decentralized system + Assignment 1 (group assignment)
Week 3	Water Supply and drainage in buildings
Week 4	Water Supply and drainage in buildings
Week 5	Water Supply and drainage in buildings
Week 6	Concepts of water harvesting in buildings
Week 7	Concepts of wastewater treatment + Assignment 2 (group assignment)
Week 8	Presentation
Week 9	Presentation

Week 10	Built environment and water cycle
Week 11	Built environment and water cycle
Week 12	Stormwater drainage and site planning + Assignment 3 (individual assignment)
Week 13	Applied study in site planning
Week 14	Applied study in site planning
Week 15	Site visit
Week 16	Test

Monsoon Semester, 2016, Faculty of Architecture, CEPT University

Code	1041	Course	Daylighting Design		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

This lecture course begins with an introduction to importance of day lighting in architectural design with the overview of historical to contemporary responses. Basic principles and strategies in day lighting design and its applications are discussed. Assignment to study day lighting in buildings, short assignments on manual calculations and models (Both physical and computerized) to simulate and compare day lighting conditions are given.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction to day lighting
Week 2	Perception and Comfort (Assignment 1)
Week 3	Perception and Comfort
Week 4	Basic Principles
Week 5	Basic Principles (Assignment 2)
Week 6	Assignment Discussions
Week 7	Assignment Discussions
Week 8	Manual Calculations
Week 9	Manual Calculations
Week 10	Midterm
Week 11	Design strategies
Week 12	Design strategies (Assignment 3)
Week 13	Day lighting Simulation software intro
Week 14	Day lighting Simulation
Week 15	Comparative analysis of Manual Vs. Virtual simulation strategies
Week 16	Final Submission of assignments and Discussion

Monsoon Semester, 2016, Faculty of Architecture, CEPT University

Code	1117	Course	History- III		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

This lecture based advanced history of architecture course will present an overview of the key concepts and changes that occurred in architecture from the era of industrialization to the present. The impact of industrialization in Europe, the advent of Modernism in Europe, the era of postmodernism, and the challenges faced in contemporary society will constitute the content of this course.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction to the Age of Enlightenment and the Origins of Modernity
Week 2	Industrial Revolution: Technological & Cultural Changes in Europe
Week 3	From Baroque to Neo-Classical Architecture: Changes in Architectural Drawing-Making and the work of Piranesi
Week 4	Emergence of New Building Types: Napoleonic Wars & the works of Blondel, Durand & Ledoux
Week 5	Comparative look at the work of K.F. Schinkel, Henri Labrouste & formulation of the Beaux Arts method.
Week 6	Ruskin & Le-duc: Discussion of new schools of thought forming the first major Criticisms of the Industrial Revolution and its effects.
Week 7	Introduction to the Modern Movement: Abstraction, Self referentiality & Complex Interpretation of Tradition
Week 8	Arts and Manifestos of Fin-de-siecle Europe
Week 9	The First Machine Age: Growth and Maturation of the Modern architectural movement, Work of Modern Masters
Week 10	Bauhaus & a comparative discussion of Models of Architectural Education
Week 11	Modern Architecture in America & the International Style
Week 12	Post War Architecture in Europe
Week 13	Situated Modernism: Works of Louis Kahn, Alvar Aalto & (post-war) Le Corbusier Criticisms of the Modern Movement: Team X, Robert Venturi & Jane Jacobs
Week 14	Indian Modernity: Colonialism, Effects of Industrialization

Week 15	Indian Architecture Post- Independence: Legacies of PWD, Institutions and Nation Building Work of Early Modern Indian Architects
Week 16	Modern-Modernity-Modernism-Modernist: Overview & rounding up the various strands of Meanings & their continuing relevance

Monsoon Semester, 2016, Faculty of Architecture, CEPT University

Code	1103-A	Course	Readings and Writings in Design and Architecture		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

The goal of the course is to improve a student's ability to articulate and express lucidly in the English language. Objectives within this are enhancement of vocabulary, improvement in the ability to structure a thought and then a presentation, and to ignite in them the passion to read. The course attempts to make them understand the importance of critically judging the expressive quality of their utterances and to always be open to myriad ideas and thought streams.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	One reading from the book chosen at the beginning of the semester. One or two readings brought in by the instructor. A write-up / debate / review Build a Lexicon with new words learnt every class.
Week 2	do
Week 3	do
Week 4	do
Week 5	do
Week 6	Theory of writing
Week 7	Common mistakes made in English language usage.
Week 8	Mid Semester Writing Assignment
Week 9	Poetry Session
Week 10	One reading from the book chosen at the beginning of the semester. One or two readings brought in by the instructor.
Week 11	do
Week 12	do
Week 13	do
Week 14	do
Week 15	Common mistakes made in English language usage
Week 16	Final Writing Assignment

Monsoon Semester, 2016, Faculty of Design, CEPT University

Code	2550	Course	Phenomenology of Design		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

This course will introduce you to a 20th century philosophical movement named Phenomenology. In this course the primary focus will be on the work of Merleau Ponty and aim to draw fundamental philosophical conclusions which will affect the thinking and practice of design. This will be a theoretical course which will have practical assignments too. There will be small activities done in the class to apply the phenomenological understanding practically. At the end of the course students will present the understanding of a research paper (which will be given to them) and produce a work.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Cartesian mind Brentano School
Week 2	Husserl-Natural attitude
Week 3	Intentionality The Lived Body and embodiment
Week 4	Merleau Ponty on perception Return to phenomena ‘To the things themselves’
Week 5	Return to phenomena ‘To the things themselves’ Activity 1 : Draw something you see - and then describe the process in phenomenological terms. The beginning point, “I am going to draw X,” is the natural attitude “taking” of X. Then, as you “deconstruct” your perceptual participation, your phenomenological attitude is already beginning. By looking at the object as an object of drawing, you are transforming the “thing X” (say, a “cup”) to an object which appears to you in such and such a way, which you are trying to capture on a piece of paper in a such and such way. Again, see if you can apply some of the terminology to describe this process.
Week 6	Phenomenological reduction Inter-subjectivity
Week 7	The sense of self Subjectivity and Self-hood – investigating 1st person
Week 8	The Body: As experience Activity 2
Week 9	Spatial experience Activity 3
Week 10	Temporal experience Activity 4
Week 11	Phenomenological approach to design
Week 12	Phenomenological approach to design

Week 13	Phenomenological approach to design
Week 14	Paper presentation
Week 15	Paper presentation
Week 16	Summary and Conclusion

Monsoon Semester, 2016, Faculty of Management, CEPT University

Code	3038	Course	Project Management		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

In today's world, the discipline of Project Management is a powerful tool that will help organizations navigate their way effectively through times of change and uncertainty. An organization with a project culture is one that knows where it is going, is focused on results and has a professional team who knows what is expected of them. Course Objectives • Exposure of the students to the concept of importance of projects from the business perspective – Strategically and operational, relevant to common managerial decisions in optimizing the project portfolio management • Discussions on pre-investment & post investment phases • Exercise on Identification & selection of viable projects • Focus on key components of project management including Project Planning, Scheduling, Risk management, Project Control & Monitoring, Team Formulation and such others • Specific focus on preparation of Techno-Economic Feasibility Report (Detailed Project Report), market research, technical & civil engineering aspects, financial viability, project appraisal, project finance tie-ups • Special focus on Service sector projects, E-Commerce projects, Infrastructure projects and allied projects. Public Private Partnership (PPP) & other modes of implementation • Developing the comprehensive understanding towards the judicious resources allocation with due consideration to ecology, environment and safety aspects. • Importance of human resources and man management • To know & discuss latest trends in project management at global level

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Project management concepts, cycle and key components
Week 2	Project Identification & Selection
Week 3	Types of Projects : Service sector, Infrastructure, E- Commerce & others
Week 4	Project Feasibility : Market
Week 5	Project Feasibility : Technical
Week 6	Project Feasibility : Financial including specific sources of funds for service sector, infrastructure and such different types of projects
Week 7	Project Appraisal
Week 8	Case studies - including Service sector & Infrastructure projects
Week 9	Mid semester exam
Week 10	Project Planning & Work Breakdown Structure (WBS)
Week 11	Project Scheduling, Prioritization, Resource Allocation

Week 12	Project Risk Management & Team Formulation
Week 13	Project Monitoring, Control & Termination
Week 14	Stakeholders & Communication Plan
Week 15	Expression of Interest (EoI), Request For Proposal (RFP) & Bid Evaluation: an overview
Week 16	New trends in Global Project Management

Spring Semester, 2017, Faculty of Architecture, CEPT University

Code	1045	Course	Structures- IV		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

Learning Goals: • Development of understanding of structural systems in concrete and steel as a structural material and its application in design • To familiarize the students about the philosophy of design methods in structural steel and reinforced concrete

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Importance of material and form in structures
Week 2	Concrete and Steel as structural materials
Week 3	History of concrete
Week 4	History of steel
Week 5	Properties of concrete as a structural material
Week 6	Properties of steel as a structural material
Week 7	Structural design philosophy of steel and concrete
Week 8	Structural design philosophy of steel and concrete
Week 9	Development of structural systems in concrete
Week 10	Development of structural systems in steel
Week 11	Element design in concrete
Week 12	Element design in concrete
Week 13	Element design in concrete
Week 14	Element design in steel
Week 15	Element design in steel
Week 16	Element design in steel

Spring Semester, 2017, Faculty of Architecture, CEPT University

Code	1047-B	Course	Vertical Studio - Working Drawings		
Typology	Studio	Credits	8	GPA/NonGPA	NonGPA

Long Description :

The studio focuses on the significant role of working drawings in order to convey and communicate design ideas. Motivated students are encouraged to get involved in the process of developing innovative design solutions by exploring various possibilities in the construction industry. The approach to design and drawing would engage the domains of building material assemblies, construction system and constantly evolving building technology.

Spring Semester, 2017, Faculty of Architecture, CEPT University

Code	1048	Course	History of Architecture: 1960s to the Present		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

Architects in today's world deal with a wide range of issues which include a very fast pace of development in technology, the concerns for the environment, the high degree of imbalances in society, particularly in India, and the range of materials and systems available to put together a building. The course will highlight the various issues present in the contemporary discourse of architecture through the texts as well as the built projects. Input lectures on specific current issues like sustainability / environmental friendly architecture, digital architecture, social concerns, conservation, materials and structure will include theoretical premises and examples of actual built works. The input sessions will be followed by student led discussions in various formats. Guest lecturers will be invited where required to enrich the classroom learning.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Readings in architectural theory that determined the deviation from the dominant Modern Architecture will be discussed and the context understood. This will prepare the base for the next part of the course.
Week 2	Readings in architectural theory that determined the deviation from the dominant Modern Architecture will be discussed and the context understood. This will prepare the base for the next part of the course.
Week 3	Readings in architectural theory that determined the deviation from the dominant Modern Architecture will be discussed and the context understood. This will prepare the base for the next part of the course.
Week 4	Readings in architectural theory that determined the deviation from the dominant Modern Architecture will be discussed and the context understood. This will prepare the base for the next part of the course.
Week 5	The question of addressing social concerns like inequity, public space, accessibility including social housing, social institutions at various scales.
Week 6	The question of addressing social concerns like inequity, public space, accessibility including social housing, social institutions at various scales.
Week 7	The question of addressing social concerns like inequity, public space, accessibility including social housing, social institutions at various scales.
Week 8	Concerns with the environment – the various practices.
Week 9	Concerns with the environment – the various practices.

Week 10	Class discussion
Week 11	Conservation – various positions, debates, theories and approaches.
Week 12	Conservation – various positions, debates, theories and approaches.
Week 13	Material explorations - development through time.
Week 14	Material explorations - contemporary practises.
Week 15	Technology - the digital paradigm.
Week 16	Globalization and urbanization - an introduction.

Spring Semester, 2017, Faculty of Architecture, CEPT University

Code	1099	Course	Sustainable Design		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

The course would have one and a half hour input session, followed by a discussion to clarify terms and concepts introduced during the input sessions. The overall duration of the course is in three parts - the understanding of 'the state of the earth' with reference to ones own footprint, reactions from various fields and specific architectural responses.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction to the Course, Discussions on the 'idea' of comfort, Discussion on the 'condition of the environment', Clarifying the terms used in the discussion and their origin. Exercise 1: Identify your favorite building to study for its environmental relationship (20% grades).
Week 2	Important thoughts and directions of environmentalism through history (Malthus, Rousseau, Emerson, Shelley, Ruskin, Morris, Thoreau, Darwin, Marsh, Muir, Steiner, Geddes, Leopold, Carsen, Rudofsky, Mumford, Meadows, Naess, Schumacher, Fathy, Lovelock, Bruntland, Papanek).
Week 3	'Shades of Green'; Various architectural approaches in response to issues of sustainability
Week 4	Strategies of sustainable design. Mainstream approaches to design and technology.
Week 5	Deep Ecology. Discussions on architectural approaches in an eco-centric paradigm (Edible Architecture, Transition Cities). Design with a Gandhian approach to Sustainable Development.
Week 6	Community-centric Approaches to Design (Co-housing, Co-design). Systems Approach to Sustainable Design (Cradle to Cradle).
Week 7	Bio-climatic approaches (Passive Design, Active systems), Technology-centric approaches (Zero-Carbon, Net-Zero), Alternative Technologies.
Week 8	Presentation by Surya Kakani: Specific process of his practice.
Week 9	Presentation by Uday Andare: Specific process of his practice.
Week 10	Presentation by Mehul Bhatt: Specific process of his practice.
Week 11	Lessons from the Vernacular (Invited Lecture)
Week 12	Approaches to designing landscapes (Invited lecture)

Week 13	Presentation by UG students on their case studies.
Week 14	Presentation by UG students on their case studies.
Week 15	Discussion on the papers by the masters students
Week 16	Discussion on the papers by the masters students

Spring Semester, 2017, Faculty of Architecture, CEPT University

Code	1638	Course	Entrepreneurship in Heritage, Art and Culture		
Typology	Discussion seminar	Credits	3	GPA/NonGPA	NonGPA

Long Description :

a) Provide an understanding of: Various aspects of Entrepreneurship, Business Model and Revenue Model. Various aspects of Business Strategies, Markets, Customers, Competitors, Resources and Competencies, Business plan from a business Ideas, b) Develop: A Detailed Business Plan from Business Idea, A Detailed Financial Projection supporting Business Plan, A Detailed Funding Pitch Presentation

Spring Semester, 2017, Faculty of Architecture, CEPT University

Code	1643	Course	Heritage and Planning		
Typology	Discussion seminar	Credits	3	GPA/NonGPA	NonGPA

Long Description :

We look at heritage from a planning perspective. The course will familiarize students with origins and practice of heritage planning drawing illustrations from various contexts and broader literature to understand the relationship between heritage conservation and urban planning. It will explore legal and institutional frameworks, developmental instruments and strategies, and their impact.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction to conservation movement and heritage planning
Week 2	Scale, terminology and the context of the larger sustainability debate
Week 3	Statutory framework - Heritage legislation
Week 4	Other frameworks - People and Institutions
Week 5	Documentation in Heritage Planning
Week 6	Community engagement - Theory and principles
Week 7	Community engagement - Case studies
Week 8	Instruments for heritage planning
Week 9	Mid Term Review
Week 10	Instruments of heritage planning - Case studies
Week 11	Impact Assessment
Week 12	Proposal writing in Heritage Planning
Week 13	Field Visit
Week 14	Proposal Development
Week 15	Proposal Development
Week 16	Final Presentation

Spring Semester, 2017, Faculty of Design, CEPT University

Code	2531	Course	Meaning and Design		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

The course aims to explore how meaning participates in creativity and design thinking. The course will be conducted through lectures, exercises and assignments. The first part of the course will entail lectures theories in Product Semantics These lectures will be accompanied with illustrations and exercises. The second part of the course will attempt to apply user-friendly analytical tools, explore alternative ways of conceptualizing a design concept and finally work towards creating design prototypes. As an important learning in this course, Prof. Uday Athvankar, from IIT, Powai, Mumbai will be invited to give lectures and also conduct exercises for the students. The course will also invite an industry expert in Ergonomics.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction and Overview of the course
Week 2	Introduction to theories of meaning and perception
Week 3	Understanding Semantics
Week 4	Meaning in Images, Products and Objects
Week 5	Semantic sensibility in design process
Week 6	Objects as Messages
Week 7	Exercise Session
Week 8	Mid-term submission
Week 9	Semantic Categorization theories
Week 10	Visual features as semantic devices
Week 11	Developing a map of category identity
Week 12	Using Metaphors
Week 13	Exercise Session
Week 14	Exercise Session
Week 15	Exercise Session
Week 16	Conclusion and overview of the learnings

Monsoon Semester, 2018, Faculty of Architecture, CEPT University

Code	1143	Course	Research Methods		
Typology	Courses	Credits	2	GPA/NonGPA	NonGPA

Long Description :

The design process invariably includes a research component. This usually takes the form of 'case studies' of buildings and physical description of site. The full potential of research in informing design is left untapped by the above mentioned methods. This introductory course in research methods familiarizes students with components of research in the field of design. The course will familiarize students to various components of research such as framing a research proposal, analyzing architecture, and writing a research document. The course will be conducted through a series of in-class exercises and session specific reading material.

Learning Outcomes :

After completing the Courses, the student will be able to :

- Students will be able to- 1. critique research proposals 2. analyze works of architecture 3. formulate a research proposal

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Recognizing the difference between data, information, knowledge, and wisdom [DIKW]. Operations required to convert data to information, information to knowledge, and knowledge to wisdom.
Week 2	Different ways of analyzing architecture: examples of architectural analysis
Week 3	Different ways of analyzing architecture: framework of analysis
Week 4	Finding a research topic- literature search, literature review, identifying gaps in existing research. Personal interest, observed phenomena as starting points.
Week 5	Identifying a research title. 'Narrowing' area/focus of research
Week 6	Aim, objective, hypothesis and research question
Week 7	Aim, objective, hypothesis, and research question continued
Week 8	Components of the research proposal
Week 9	Correlation of framework of analysis, research method and analysis output
Week 10	Writing the research document: structure and chapterization
Week 11	Writing the research document: language and formats
Week 12	Exam

Week 13	NA
Week 14	NA
Week 15	NA
Week 16	NA

Monsoon Semester, 2018, Faculty of Architecture, CEPT University

Code	1145-C	Course	Contemporary rootedness and built expression		
Typology	Studio	Credits	14	GPA/NonGPA	NonGPA

Long Description :

Studio Intent The contexts of our times are replete with great contrasts and immense opportunities. Physical, socio-economic and cultural contexts define the generative tools for design engagement to transform the commonplace. A judicious use of resources is the need of the hour, putting thoughtful efforts in building, at the forefront of a concerted approach. Our emphasis during the course of the studio shall be to explore notions of a 'Contemporary rootedness and built expression' guided by one's concerns. Discussions, peer reviews and structured self-motivated, process based milestones will be the means to guide the ideas forward where each individual will engage in order to..

- Define an area of interest gleaned through one's work, or deeper influences. In other words, defining clearly 'where you are coming from' and what you wish to explore.
- Develop skills to transform idea to program and program to built intervention.
- Anchor an idea and embed the design process with meaning.
- Interpret contextual realities and evolve an armature for engagement that is one's own.
- Challenge the normative brief, while exploring the importance of a subversive strategy at times for a larger good and not merely providing and satisfying a list of requirements.
- Develop ways of seeing and evolve a process to act upon.
- Test one's ability to put a building together through an appropriate, built response.
- Bring about tectonic resolutions of building systems and details that are expressive of the fundamental concerns of the project.
- The process must explore various tools of design communication at your disposal such as drawings, models, sketches and other media in order to delineate the process and lead to the final design. Pre- studio thoughts, requirements and about getting there.
- Abstract note on the project with a caption.
- Share your engagements with an idea and how you have arrived, with what you want to do.
- Readings, verse, films, people and experiences may inform your intent and become the subtext for your project. It is important to identify and define the core of an idea you wish to explore. It could be a story that leads you to a place and maybe something that needs to be done in a particular place, to transform positively through an intervention.
- One could also take a mundane brief for a particular site, but imagine it differently, interpreting it or bringing about a certain layered complexity.
- The brief and program requirements.
- Site : Detailed context documentation, photos, videos, drawings, maps, historical records, archival material related to the project site, references, readings, written and oral accounts related to your site and can be used to construct and evolve possibilities to intervene.
- Being aware of the land and not just the buildings, information on the geography, aspects of ecology, soil, water and material histories of the region, geo – socio - economic data and other such understanding will be important.
- Site drawings, context information must cover about 50 m around the site with through site sections.
- The built intervention may be in the range of 2500 sq.m to 6500-sq.m area.
- The site area should not be less than 1500 sq.m. This is a guided studio. Individual commitment to one's work and consistency of effort are pre requisites for this process intensive studio. Students are encouraged to present their independent project proposals for review as they see a certain compatibility with the range of work and interests of the studio tutor for a meaningful engagement.

Learning Outcomes :

After completing the Courses, the student will be able to :

--

Spring Semester, 2019, Faculty of Architecture, CEPT University

Code	AR3020	Course	Thesis		
Typology	Thesis/Dissertation/Capstone Project (T/D/C)	Credits	15	GPA/NonGPA	GPA

Long Description :

Students demonstrate their abilities to conduct independent research on topics of architectural relevance in this course. The progress of the student is evaluated through interim reviews and a final viva voce.

Learning Outcomes :

After completing the Courses, the student will be able to :

- na

Spring Semester, 2019, Faculty of Architecture, CEPT University

Code	AR3600	Course	Professional Practice		
Typology	Courses	Credits	2	GPA/NonGPA	GPA

Long Description :

In this course, participants will gain insights into Professional Practice in domains related to built environment, and opportunities and possibilities as well as larger issues related to theory and practices in the field. Going through this course will not tell you what is right for you, but it will help you decide.

Learning Outcomes :

After completing the Courses, the student will be able to :

- The students should have an overview of the various components of a professional practice, and understand their role as professionals, in particular with reference to the ethics and code of conduct. The students will acquire knowledge and skills sufficient for early stages of directed activity in an existing practice or be able to initiate a practice of their own. The students will be exposed to the basics of legalities of contracts.

Spring Semester, 2019, Faculty of Architecture, CEPT University

Code	AR3701	Course	Advance Visualization and Media (Block Elective)		
Typology	Courses	Credits	3	GPA/NonGPA	GPA

Long Description :

BLOCKELECTIVE -starting from 28th January to 4th February 2019.(Timings - 9.30 -1.30 pm) The course explores the potential of writing your own software within the context of visual arts and design. The participants will learn to use code (as a medium) to directly speak to the computer and learn the basics of human computer interaction. We live in a culture where art and design are completely dominated by software. Often artists, architects, video game makers and creative professionals commission custom software to achieve specific goals for their projects. Generative art and design have become mainstream and algorithms affect our daily lives. We will use visual art and the hype around 'generative art' as a vehicle to develop our critical thinking faculties and form our own perspectives around the subject. The learning objectives of the course are as follows: • Get comfortable working with code to create generative visuals • Understand and visualise data • Using inbuilt hardware capabilities like Camera, Touchscreen, Microphone, etc to provide interactivity • Develop perspectives on 'algorithmic culture' • Reflecting upon the nature of 'authorship' in the age of open source and generative algorithms

Learning Outcomes :

After completing the Courses, the student will be able to :

- Interactive Generative Visuals + Writeup

Summer Semester, 2019, Faculty of Architecture, CEPT University

Code	S19FA007	Course	Thinking Hands – A Collective Design-Build Workshop		
Typology	-	Credits	5	GPA/NonGPA	GPA

Long Description :

Join hands with an interdisciplinary team of faculty and master artisans in a unique design-build exercise in the village of Punadra in Gujarat. The focus of this intervention is to build a low-cost, context appropriate, sustainable Ecosan (a form of no-waste toilet system) in the village school that currently serves 300 students and 40 Anganwadi students yet lacks basic infrastructure such as proper sanitation. Through a 10-day period of working, learning and living in the village, the workshop attempts to stitch a variety of technical, social and collaborative experiences expanding on the potentials of what architecture & design can accomplish. The techniques employed will combine standard practice with some outstanding innovations from the last 30 years in vernacular architecture (shallow domes, bamboo framing, long-lasting thatch, etc). This hands-on exercise seeks to encourage every participant to find his/her own way of combining the formal and the vernacular harmoniously, & to benefit from the vernacular without destroying it, but striving to contribute to it. The idea of Building As Learning Aid (BALA), used not only in education but also in sanitation, as a method to immerse design in collective meaning & story-telling & vice-versa, will be an important help in this endeavour. Finally, the 10 day period will be interspersed with collective activities such as discussions, story-telling sessions, cooking sessions, a talk by an eminent social development practitioner aimed at creating a space for learning, introspection and reflection. Participants will be hosted in homestays in the village by the Love India fellowship at a cost (2500 rupees, mandatory for participants). Expenses for Students :- Food & Stay- Rs. 2500/-, Local Travel - Rs. 500/-, Material - Rs.5000/-.

Daily Plan & Assessment :

Days	Exercise Description
Day 1	Report to Site, Introduction to the rough Design, Working on the final elements, Evening: Chai Session by Laurent Fournier - lessons in innovative vernacular architecture
Day 2	Work at Site, Evening: Chai Session - Experiencing life in a village, Love India Fellow (TBC)
Day 3	Work at Site, Evening: Chai Session - stories and music (all participants)
Day 4	Work at Site, Evening: Chai Session - community cooking
Day 5	Work at Site, Evening: free to explore
Day 6	Work at Site, Evening: Chai Session - Safai Vidyalaya, Jayesh Patel
Day 7	Work at Site, Evening: free to explore
Day 8	Work at Site, Evening: Chai Session - Sustainability in everyday life, Sangita Kapoor

Day 9	Work at Site, Evening: Chai Session - participant led feedback, introspection, reflection
Day 10	Finish Work at Site, launch ceremony, Evening: collective debrief workshop, whats next, Saptarshi Mitra
