Long Description :

History of civilization is important to learn because it can provide an in-depth knowledge of the development and accomplishments of the human race. Man has always questioned his existence and his roll in the larger context. Looking back at a period of time when Human beings set aside their petty differences and decided to bond together as a society that was stable and based on agriculture and trade. This course will put an emphasis on Early civilizations which started and thrived near fertile areas of four major rivers around the world. The course will focus on these ancient cultures and how their knowledge, learning, wisdom led to manifestations in development of distinct culture and architecture. What factors affected these developments? What was/is the contribution of man made factors that led to development of civilization? How do some of these factors affect the modern/contemporary society? These are some of the questions that this course will try to find.

Code	S15FA003	Course	If Pictures can Speak Why Write about Architecture?		
Typology	-	Credits	5	GPA/NonGPA	NonGPA

Monsoon Semester, 2015, Faculty of Architecture, CEPT University

Code	1005-H	Course	Vertical Studio- Building with History		
Typology	Studio	Credits	8	GPA/NonGPA	NonGPA

Long Description :

Historical structures are shaped by social and political systems, religious beliefs, design principles and technologies. The architectural language holds clues to these systems and it is essential to be able to read them. The studio will address questions like, how does one design a building next to an historical structure TODAY! What are the ideological, architectural and technological debates that one is faced with?

Monsoon Semester, 2015, Faculty of Architecture, CEPT University

Code	1006	Course	Building Elements		
Typology	Workshop	Credits	4	GPA/NonGPA	NonGPA

Long Description :

This includes the detailed learning goals of the course • To enable students to understand the construction and placing of various building elements together using different material with respect to its material properties. • To develop the understanding of details for various building elements

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Basics of all building elements. Floor and roof and its components (timber, steel, RCC) + Assignment 1
Week 2	Floor and roof and its components
Week 3	Floor and roof and its components
Week 4	Floor and roof and its components + Introducing concept of elements being put together by means of Assignment 2
Week 5	Working on elements being put together by means of Assignment 2
Week 6	Working on elements being put together by means of Assignment 2
Week 7	Working on elements being put together by means of Assignment 2
Week 8	Working on elements being put together by means of Assignment 2 + Introduction to openings
Week 9	Doors and windows detailing – submission + Introduction to staircase
Week 10	Study of staircase as an element
Week 11	Study of staircase as an element
Week 12	Study of staircase as an element + Introduction of toilets and services
Week 13	Study of toilets and services
Week 14	Study of toilets and services
Week 15	Study of toilets and services
Week 16	Final compilation of drawings - plans, sections, elevations and model

Monsoon Semester, 2015, Faculty of Architecture, CEPT University

Code	1068	Course	History 1		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

This course initiates students on journey of History & Theory of Architecture. Emphasis of this course is to position Architecture as a direct response to contextual factors. First part of the course looks at Architecture as a part of material culture in small-scale subsistent communities inhabiting varied environmental conditions across the world. Here Architectural configurations, forms and elements are studied as a direct response to immediate context such as land, topography, climate, resources. Also, the settlements, dwellings and community spaces are discussed in relation to contemporary social and economic factors. Second part of the course looks at early agro-urban civilizations such as ancient Egypt, classical Greece, Indus valley and early Indian (Vedic, Buddhist) in relation to its immediate as well as boarder context. Here spatial organization and form character are studied as expressions of social and political order. Drawing relationships within their larger cultural milieus, these examples are discussed using Architectural tools such as geometry, proportion, orientation, hierarchy and scale. Exploiting the contemporary Indian milieu, the course explores simultaneity of various civilizational modes and tries to recognize them in our present everyday life. Cross references and comparisons with contemporary human habits are made deliberately to generate discussion. Along with input lectures, books and assignments, course draws upon various popular mediums of engagements such as movies and web applications as modes of familiarization and visualization with course contents. Learning Goals: • To introduce and develop awareness about basic relationships between Historical and Theoretical research to architecture • To develop understanding of the relationship between architectural history and theory in relation to geographical, social, cultural, philosophical and political context • To understand methods of reviewing and investigating historical precedents through architectural tools.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction to History & Theory of Architecture Habitats in Human History
Week 2	Subsistence community - 1
Week 3	Subsistence community - 2
Week 4	Subsistence community - 3
Week 5	Comparing Landscapes of Habitations Modes of Productions & Modes of Resource use
Week 6	Farms & Towns: Agro urban civilizations
Week 7	Indus & Saraswati Valley
Week 8	Vedic India

Week 9	Buddhist India
Week 10	Early Hindu India
Week 11	Early Hindu India
Week 12	Ancient Egypt
Week 13	Ancient Egypt
Week 14	Classical Greece
Week 15	Classical Greece
Week 16	Discussions

Monsoon Semester, 2015, Faculty of Architecture, CEPT University

Code	1093	Course	Visualization and Representation-3		
Typology	Workshop	Credits	2	GPA/NonGPA	NonGPA

Long Description :

Various methods of visualization through simulation are the mainstay of this course. Special emphasis is laid on the use of digital techniques as a design tool will be explored. Experimentation, innovation and exploration will be encouraged in this course. This course will equip a student to use multiple techniques in design thinking.

Monsoon Semester, 2015, Faculty of Architecture, CEPT University

Code	1098 A	Course	Introduction to Environment		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

Environmental changes, their causes, and their impacts form an important aspect of contemporary discussions, with a focus on interactions between the natural environment and the built environment. Both equally influence and impact the other, and are studied under the domain of environmental studies. Man's responses to the environment within which the act of building takes place is a primary driver of the architectural form, space and experience. From this perspective, sensitivity towards the environment and understanding it in its physical as well as social context are instrumental to architectural education. This course is the first step, establishing the basic tenets of the natural environment, its systems and its processes that human beings interact with and respond to. This will be followed by a course that focuses on the relationship between environment and society. The course aims to develop students' ability to observe the visible and not-so-visible environmental characteristics, and to introduce them to the basic building blocks of an environmentally sensitive architecture. Understanding components of the natural environment, how it influences the act of building, and how it is impacted by the act of building form three important objectives of the course. The course lectures will be on the components of the environment, namely air, water, land and biodiversity, wherein students will be introduced to the natural processes, ecosystems, terrain & topography, watersheds, etc. Each component will be studied from three concepts; viz. conceptual understanding, architectural responses, and environmental impacts from the act of building. These will be integrated with exercises, wherein students will employ various tools and methods of environment mapping, environment perception, and environment analysis.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction
Week 2	Air
Week 3	Air
Week 4	Water
Week 5	Water
Week 6	Land
Week 7	Land
Week 8	Mid Term Exam
Week 9	Biodiversity and Ecosystems
Week 10	Biodiversity and Ecosystems

Week 11	Climate and Weather
Week 12	Pollution (air, water, land)
Week 13	Natural Resources and Materials
Week 14	Status of the Environment
Week 15	Human Ecology/ Social-Ecological Systems
Week 16	Interpretation of environment

Monsoon Semester, 2015, Faculty of Design, CEPT University

Code	2062	Course	History of Design		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

Design history is the study of objects and notions of design in their historical and stylistic contexts. With a broad definition, the contexts of design history include the social, the cultural, the economic, the political, the technical and the aesthetic. Design history has, as its objects of study, all designed objects including those of architecture, crafts, interiors, textiles, graphic design, industrial design, furniture design and product design.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction to the course. Greece-Roman period (7th Century BC-5th Century AD)
Week 2	Greece-Roman period continued (7th Century BC-5th Century AD)
Week 3	Romanesque and Byzantine periods (5th-9th Century)
Week 4	Gothic Period (9th-14th Century)
Week 5	Islamic Architecture in the Levant and Europe(7th-15th Century)
Week 6	Indian Architecture of the middle ages (10th-17th Century)
Week 7	Renaissance in Europe (14th-15th Century)
Week 8	Neo Classical and Gothic revival styles of Europe (16th-19th Century)
Week 9	Vernacular/classical/Romantic Period in Europe, Birth of Interior Decoration as seen through Baroque and Rococo styles (16th-18th Century)
Week 10	Vernacular/classical/Romantic Period in Europe continued. Early Industrial Revolution (1680-1750)
Week 11	Late Industrial Revolution (1750-1850)
Week 12	Colonial styles across India (1757-1950)
Week 13	Post Industrial Revolution (1850-1900) and other Stylistic developments, birth of Interior Design
Week 14	Bauhaus and Modern Movement (1910-1934)
Week 15	Modernism and Post Modernism
Week 16	Conclusion

Winter Semester, 2015, Faculty of Design, CEPT University

Code	W15FD006	Course	Architectural Photography

Spring Semester, 2016, Faculty of Architecture, CEPT University

Code	1005-J	Course	Vertical Studio-Form and Material		
Typology	Studio	Credits	8	GPA/NonGPA	NonGPA

Long Description :

1. To stress the relevance of structure as the maker of space. 2. To emphasize the relationship between material, structure and form. 3. To develop ability to systematically generate structural system as a primary source of production architectural form. 4. To develop ability to investigate form comes up with design methodology and demonstrate a design resolution. 5. To derive a structural system that becomes the foundation of spatial system.

Spring Semester, 2016, Faculty of Architecture, CEPT University

Code	1007	Course	Structures 3		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

To develop an understanding of basic requirement of stability, strength of material and behavior of basic structural elements and their importance in structural system.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction to structural requirements.
Week 2	Qualitative understanding of centre of gravity and inertia
Week 3	Centre of gravity - Moment of inertia
Week 4	Centre of gravity - Moment of inertia
Week 5	Concept of shear force and the bending moment
Week 6	S F and B M diagram for cantilever, simply supported and overhang beams with various types of loadings. Importance of S F & B M diagrams in the selection of a structure system.
Week 7	S F and B M diagram for cantilever, simply supported and overhang beams with various types of loadings
Week 8	S F and B M diagram for cantilever, simply supported and overhang beams with various types of loadings
Week 9	Test
Week 10	Bending stress & its importance in beams
Week 11	Bending stresses in beams
Week 12	Presentation and Discussion of Assignment 1
Week 13	Concept of stability, buckling of columns, short and long columns, Euler's and buckling load effects of end conditions on the buckling load. Combined direct and bending stresses, Kern and its importance, solution of a few practical problems
Week 14	Combined direct and bending stresses, Kern and its importance, solution of a few practical problems
Week 15	Combined direct and bending stresses, Kern and its importance, solution of a few practical problems
Week 16	test

Spring Semester, 2016, Faculty of Architecture, CEPT University

Code	1079	Course	History & Theory of Architecture-2		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

EMPHASIS: Codification of knowledge and abstraction in architecture with an emphasis on the Indian context • Codification into systems of knowledge: design as the application of evolved elements and rules of combination to evolve the common architectural language • Resultant continuities and their contextual variations • Type as a cultural response capable of contextual variation • Relationship with landscape – the sacred and the social represented in architectural form • Unified ideologies expressed as abstract principles and regional expressions • Mathematics, geometry, systems of proportion, symmetry, axuality and regularity as tools of a universal order. • Design as a conscious creative activity – the emergence of the architect as a multifaceted artist in singular control of the work. ARCHITECTURAL EXAMPLES: Hindu architecture • Islamic architecture • Parallel European developments (Romanesque, Gothic, Renaissance) SCALES OF ENGAGEMENT: Settlement; Institutions: Religious, Social, Political; Dwelling

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction - Codification of knowledge in Architecture
Week 2	Early India - Vedic way of life and its evolution referenced through Epics and Chanakya
Week 3	Buddhist India - Institutions of "Dhamma"
Week 4	Hindu Temple - Origins and Evolution of Religion
Week 5	Hindu Temple - Language of an occupied form (Study visit to Modhera/Polo)
Week 6	Hindu Temple - Types and Variations
Week 7	Islam - Origins of Ideology and its forms
Week 8	Islam in India - Types and Contextual Variations (Study visit to Sarkhej/Champaner)
Week 9	Islam in India - Language of contextual continuities
Week 10	Continuities from Greece and Rome
Week 11	Early Christian Architecture in Europe
Week 12	European parallels - Romanesque Architecture
Week 13	European parallels - Gothic Architecture
Week 14	European parallels - Renaissance

Week 15	Language in Architecture
Week 16	Summing up Session and Notes on Exams

Spring Semester, 2016, Faculty of Architecture, CEPT University

Code	1542	Course	Introduction to Landscape Design		
Typology	Lecture	Credits	3	GPA/NonGPA	NonGPA

Long Description :

Human activities intervene on land and natural systems during their course of development, many a times with adverse results. It is imperative to study and assess land and nature before planning or designing any such intervention - especially one related to human habitation. This course establishes fundamental understanding layers of nature and their interpretations on Landscape design. Students will formulate and conduct site analysis for a given site to assess the natural layers, understand various landscape interactions occurring between the elements of nature considering the given site to be a part of larger regional fabric. It will also attempt to read, map and interpret the various qualitative experiences associated to the elements of nature together with understanding the topography, basic site grading, drainage pattern and surface hydrology and flora, fauna and site ecology. The analysis done will be later applied to develop a comprehensive landscape design for part area of site studied. Continuous evaluation shall form a part of the lecture series through group and individual assignments.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Course orientation , Introduction to elements of Landscape
Week 2	Seeing the landscape - Site Visit
Week 3	Discussion : Seeing the Landscape - Individual Interpretations
Week 4	Reading the Landscape - Site Visit
Week 5	Discussion on Reading and mapping the Landscape and various techniques of mapping
Week 6	History of Landscape Intervention, Design Inspirations
Week 7	Site Planning and case studies Discussion - Landscape Design Concepts and inspirations for chosen site
Week 8	Site grading, Slope analysis, Rainwater Harvesting for chosen site, Discussion: Site grading for Part areas of Chosen site
Week 9	Lecture on Climate responsiveness, View sheds and Vistas Discussion on Site connectivity
Week 10	Lecture on Plants and Design, On Site Mapping - Flora and Fauna, Site Ecology
Week 11	Landscape Design Development : Stage 1- Conceptual Design Review Discussion on Presentation techniques

Week 12	Landscape Design Development: Stage 2 - Final Presentation Drawings Review, Discussion on Planting Design
Week 13	Landscape Design Development - Stage 3 - Part Grading Details, Discussion - Basic Construction Details
Week 14	Landscape Design Development : Stage 4 - Conceptual Planting Design, Discussion on Documentation of student works
Week 15	Presentation of Student Works
Week 16	Presentation of selected academic or professional works of Faculty / students and concluding lecture

Spring Semester, 2016, Faculty of Technology, CEPT University

Code	5031	Course	Disaster Management		
Typology	Lecture Type 2	Credits	2	GPA/NonGPA	NonGPA

Long Description :

The course of Disaster Management is designed to cover fundamentals of disaster management considering policy and act of Gujarat and India. It is based on needs of time in context of current developments and trends in the field of Disaster Management. Objective is to provide insight, knowledge and skills to students for their future performance.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction History, Definitions: Disaster, Hazard, Vulnerability, Risk and their Relationship, Casual Factors and Natural Phenomenon, Impact of Disasters, Types of Hazards and Classification for Planning Purpose.
Week 2	Introduction History, Definitions: Disaster, Hazard, Vulnerability, Risk and their Relationship, Casual Factors and Natural Phenomenon, Impact of Disasters, Types of Hazards and Classification for Planning Purpose.
Week 3	Understanding Hazards & Disasters Earthquake, Cyclone, Floods, Droughts, Epidemics, Fire, Environmental Degradation, Industrial & other Accidents, Human Induced Activities.
Week 4	Planned Development and Activities of Disaster Management Cycle Prevention, Mitigation, Preparedness, Search & Rescue, Relief, Rehabilitation & Reconstruction.
Week 5	Disaster Management Framework at Different Levels International, National, State, District and Grass Root Level, National Vulnerability for Major Hazards with Special Reference to Gujarat State.
Week 6	Disaster Management Plan Development Scientific Planning Process, Plan Structure etc., Understanding Risk, Risk Reduction, Risk Analysis Techniques, Hazard Assessment, Types of Vulnerability, its' Identification & Analysis.
Week 7	Disaster Management Plan Development Scientific Planning Process, Plan Structure etc., Understanding Risk, Risk Reduction, Risk Analysis Techniques, Hazard Assessment, Types of Vulnerability, its' Identification & Analysis.
Week 8	Community Based Disaster Management Approach Why and How, Steps to be Followed, Disaster Risk Management Program.
Week 9	Disaster Response Mechanism Basics of Incident Command System, EOC Management, Right Based Approach, Right of Community in Emergencies.

Week 10	Disaster Response Mechanism Basics of Incident Command System, EOC Management, Right Based Approach, Right of Community in Emergencies.
Week 11	Different Aspects of DM Disaster and Media Management, Role of Media in DM, Emergency Communication and Introduction to HAM Radio, Relief Coordination and NGO support, Types of NGO, GO-NGO-People interface, Role of Technology in Disaster Management, Industrial Hazards and Disaster Management.
Week 12	Different Aspects of DM Disaster and Media Management, Role of Media in DM, Emergency Communication and Introduction to HAM Radio, Relief Coordination and NGO support, Types of NGO, GO-NGO-People interface, Role of Technology in Disaster Management, Industrial Hazards and Disaster Management.
Week 13	Gujarat State Disaster Management Policy & Act Need, Aim & Objectives, Key Elements, Key Responsibilities, Principles of Disaster Management, Approach and Strategy, Phase Wise Activities. Special Features like Penalty Provisions and Special Powers in GSDM Act, Provisions of National Disaster Management Act – 2005. Relief Coordination and NGO support, Types of NGO, GO-NGO-People interface, Role of Technology in Disaster Management, Industrial Hazards and Disaster management.
Week 14	Gujarat State Disaster Management Policy & Act Need, Aim & Objectives, Key Elements, Key Responsibilities, Principles of Disaster Management, Approach and Strategy, Phase Wise Activities. Special Features like Penalty Provisions and Special Powers in GSDM Act, Provisions of National Disaster Management Act – 2005.
Week 15	Gujarat State Disaster Management Policy & Act Need, Aim & Objectives, Key Elements, Key Responsibilities, Principles of Disaster Management, Approach and Strategy, Phase Wise Activities. Special Features like Penalty Provisions and Special Powers in GSDM Act, Provisions of National Disaster Management Act – 2005.
Week 16	Case Studies of Different Natural & Man made Events of Different levels: Local, National & International.

Spring Semester, 2016, Faculty of Management, CEPT University

Code	3035	Course	Gender and the City		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

With the growing impact of globalization, urbanization and modernization, Indian cities are changing rapidly. Today 31.16% (2011 Census) of the country's population lives in urban settlements. The urban is therefore a vital dimension in most people's everyday lives. The typical post-colonial city is chaotic, largely unplanned and plagued by many problems of land use, infrastructure, traffic and informal settlements. There have been efforts at the local, regional and national levels to address these concerns but they remain fragmented. India is in the midst of a rapid transition from a predominantly rural to an urban society. An examination of cities and their role in accommodating this transition is crucial to imagining its more inclusive and sustainable future. However, the cities have increasingly become less accessible to the marginalized population. In addition, in the physical planning process, the neutrality of the user is taken-for-granted and the element of people's participation is minimal. Like cities, gender relations are porous, multifaceted, and contested-a constant work in progress. With increased violence inflicted on women, the awareness about the urban environment and gender is growing. It is now well accepted internationally that gender plays a highly significant role in the structure, use, and shape of urban space. The ability to access space is often a function of status and power. Men and women experience and identify with urban space differently. This course attempts to give a broad and preliminary understanding of the city as a contemporary gendered space. It will examine the consequences of women's and men's urban experiences with attention drawn to the differences in the context of other factors such as race, class, and age. It will progress towards analyzing selected urban aspects that make-up the physicality and governance of the city, including discussions on topics such as public transport, toilets, parks and other amenities, besides policies that enable more equitable civic engagement. It will also attempt to critically examine women's participation in management, planning practices as well as in law enforcement.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Concept of gender and city: Introduction
Week 2	Watching a documentary and writing a review
Week 3	Understanding the city and its components with respect to gender: Gendered nature of public spaces, looking at streets and other areas, personal narratives of a variety of people
Week 4	Case analysis by students: Readings and other discussions
Week 5	Transportation and city: Multiple transport systems, walk-ability and pedestrian nature and bicycles verses vehicular lanes, impact on gender
Week 6	Case analysis by students: Reading and other discussions
Week 7	Public parks and gardens:Size, location, amenities, safety issues, access by genders, urban connections

Week 8	Guest Lecture I
Week 9	City governance: The process of decision making in city governments, participation process and gender representation, gender budgeting
Week 10	Case analysis by students, Reading and other discussions
Week 11	Selection of individual projects, Project scope discussions
Week 12	Guest Lecture II
Week 13	Sanitation and city, Public toilets and women/men's requirements, the locations, design, safety issues and other related problems
Week 14	Case analysis by students, Reading and other discussions
Week 15	Gender and marginalization in urban context Women construction workers, rag pickers and others
Week 16	Presentation of the final assignment Individual or group projects as selected

Spring Semester, 2016, Faculty of Technology, CEPT University

Code	5629	Course	Modelling and Monitoring of Environmental Parameters		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

BACKGROUND: Earth is a dynamic system witnessing changes with the blink of an eyelid. With the growth in the population, there is a significant change in various environmental parameters which includes built-up area; ambient temperature, relative humidity, anthropogenic heat and subsequently the entire surface energy budget; emissions and concentration of the gases (pollutants); and many more. Alterations in these parameters have adversely affected the overall environment and finally the entire mankind. **PROPOSED COURSE:** With this background, the proposed course is designed with a focus to monitor as well as model the various environmental parameters. Topics which will be covered in this course are as follows: • Assessment of Land use / land cover using satellite data • Assessment of Air quality using satellite data • Assessment of Meteorological parameters using satellite data • Local climatic zones and Urban Heat Island Effect using satellite data • Bio-meteorological Indices and Human Thermal Comfort • Interfacing Land use with surface energy budget and human thermal comfort • Simulating and Mapping the Heat Stressed zones

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction to the various environmental parameters; the impact of these variable on human functioning at various levels; scientific strategies for monitoring these variables
Week 2	Land use / Land cover (LU/LC) assessment through multiple approaches (manual, using Remotely Sensed (RS) data by satellites)
Week 3	Land use / Land cover mapping; case studies of various megacities of India
Week 4	Air Quality – its importance to human health; air quality assessment (methods and strategies)
Week 5	Application of satellite data for assessing the various air pollutants; Preparation of Air Quality Maps
Week 6	Introduction to various meteorological parameters and their significance in human functioning
Week 7	Monitoring and mapping of various meteorological parameters using satellite data
Week 8	Brain-storming for ‘Problem Formulation’ to be attempted by a group of 2-3 students
Week 9	Introduction to Macro and Micro climate; Local Climate Zones (LCZ)

Week 10	Urban Heat Island (UHI) Effect, Strategies for assessing the UHI effect in a city (field investigations, using RS and GIS), Case-studies of assessing the UHI effect in a city
Week 11	Introduction to Bio-meteorological indices
Week 12	Bio-meteorological indices and Human Thermal Comfort,
Week 13	City Survey on ‘How comfortable are we’? Interfacing comfort and energy consumption.
Week 14	Interfacing Land use with surface energy budget and human thermal comfort through simulations
Week 15	Introductions to various software and models dealing with various Environmental Parameters
Week 16	Assignment Presentation by each group, Course Learning outcome and its translation into ‘What we can now do for Ahmedabad City’

Monsoon Semester, 2016, Faculty of Architecture, CEPT University

Code	1005-K	Course	Vertical Studio- Tall Buildings		
Typology	Studio	Credits	8	GPA/NonGPA	NonGPA

Long Description :

This course intends to explore the potentials of space making in tall buildings. The rationale of structure, services, economy, and regulations are usually seen as restrictive constraints on the sense of place and identity in tall buildings. Through a series of design exercises, this studio will attempt to arrive at a meaningful contribution to the discussion of Architecture.

Monsoon Semester, 2016, Faculty of Architecture, CEPT University

Code	1012	Course	Building Systems and Services		
Typology	Lecture	Credits	4	GPA/NonGPA	NonGPA

Long Description :

• To understand the concepts of plumbing, waste water recycling and rainwater harvesting for buildings. • To understand the concepts of water management and conservation of resource in larger context of built form. I) HVAC: Heating, Ventilation and Air conditioning services in Buildings: The special applications of Pharma, Hospitals, Textile Mills, Malls, Engg., Infra projects will be covered. Students will be familiarized with basic type of systems, heat load calculations, duct and pipe design, system components etc. BMS planning II) Vertical Transportation: (Lifts and Escalators): Types of Elevators, their sizing, to find number of Elevators for given application, traffic flow in building, provision in building, IS code, study of manufacturers plans and incorporation in building design suitably. III) Fire Protection and Alarm systems: Provisions of Fire safety in High Rise buildings as per local Municipal bye laws, different types of systems like Hydrant, Sprinklers, Gas suppression, detectors, smoke evacuation in basement areas of large buildings, alarm system etc. Residential, Commercial and Industrial buildings will be covered. IV) Electrical Power distribution for LT and HT Power supply in buildings. Planning of substation, cable ducts, bus ducts, earthing installation etc. with reference to Building Design for Commercial and Industrial complexes. V) Green Building concepts with LEED and GRIHA certification. VI) Basic concept: How to incorporate these Building Services components in Building design from conceptual stage till execution in such a manner that Building functioning is not compromised and aesthetic aspects are taken care well. Architect being in the center of the Project has to get involved with client, contractors and various consultants at different times and be an effective leader. Site visit to running project will be planned to familiarize students with Services components.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Water as a natural resource and concepts watershed and hydrological cycle of water
Week 2	Water sources, quality, water infrastructure as centralized vs decentralized system + Assignment 1 (group assignment)
Week 3	Water Supply and drainage in buildings
Week 4	Water Supply and drainage in buildings
Week 5	Water Supply and drainage in buildings
Week 6	Concepts of water harvesting in buildings
Week 7	Concepts of wastewater treatment + Assignment 2 (group assignment)
Week 8	Presentation
Week 9	Presentation

Week 10	Built environment and water cycle
Week 11	Built environment and water cycle
Week 12	Stormwater drainage and site planning + Assignment 3 (individual assignment)
Week 13	Applied study in site planning
Week 14	Applied study in site planning
Week 15	Site visit
Week 16	Test

Monsoon Semester, 2016, Faculty of Architecture, CEPT University

Code	1041	Course	Daylighting Design		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

This lecture course begins with an introduction to importance of day lighting in architectural design with the overview of historical to contemporary responses. Basic principles and strategies in day lighting design and its applications are discussed. Assignment to study day lighting in buildings, short assignments on manual calculations and models (Both physical and computerized) to simulate and compare day lighting conditions are given.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction to day lighting
Week 2	Perception and Comfort (Assignment 1)
Week 3	Perception and Comfort
Week 4	Basic Principles
Week 5	Basic Principles (Assignment 2)
Week 6	Assignment Discussions
Week 7	Assignment Discussions
Week 8	Manual Calculations
Week 9	Manual Calculations
Week 10	Midterm
Week 11	Design strategies
Week 12	Design strategies (Assignment 3)
Week 13	Day lighting Simulation software intro
Week 14	Day lighting Simulation
Week 15	Comparative analysis of Manual Vs. Virtual simulation strategies
Week 16	Final Submission of assignments and Discussion

Monsoon Semester, 2016, Faculty of Architecture, CEPT University

Code	1117	Course	History- III		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

This lecture based advanced history of architecture course will present an overview of the key concepts and changes that occurred in architecture from the era of industrialization to the present. The impact of industrialization in Europe, the advent of Modernism in Europe, the era of postmodernism, and the challenges faced in contemporary society will constitute the content of this course.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction to the Age of Enlightenment and the Origins of Modernity
Week 2	Industrial Revolution: Technological & Cultural Changes in Europe
Week 3	From Baroque to Neo-Classical Architecture: Changes in Architectural Drawing-Making and the work of Piranesi
Week 4	Emergence of New Building Types: Napoleonic Wars & the works of Blondel, Durand & Ledoux
Week 5	Comparative look at the work of K.F. Schinkel, Henri Labrouste & formulation of the Beaux Arts method.
Week 6	Ruskin & Le-duc: Discussion of new schools of thought forming the first major Criticisms of the Industrial Revolution and its effects.
Week 7	Introduction to the Modern Movement: Abstraction, Self referentiality & Complex Interpretation of Tradition
Week 8	Arts and Manifestos of Fin-de-siecle Europe
Week 9	The First Machine Age: Growth and Maturation of the Modern architectural movement, Work of Modern Masters
Week 10	Bauhaus & a comparative discussion of Models of Architectural Education
Week 11	Modern Architecture in America & the International Style
Week 12	Post War Architecture in Europe
Week 13	Situated Modernism: Works of Louis Kahn, Alvar Aalto & (post-war) Le Corbusier Criticisms of the Modern Movement: Team X, Robert Venturi & Jane Jacobs
Week 14	Indian Modernity: Colonialism, Effects of Industrialization

Week 15	Indian Architecture Post- Independence: Legacies of PWD, Institutions and Nation Building Work of Early Modern Indian Architects
Week 16	Modern-Modernity-Modernism-Modernist: Overview & rounding up the various strands of Meanings & their continuing relevance

Monsoon Semester, 2016, Faculty of Architecture, CEPT University

Code	1518	Course	Field Study of Plants		
Typology	Lecture	Credits	3	GPA/NonGPA	NonGPA

Long Description :

This lecture course introduces students to plant material as a fundamental element in landscape design. The course emphasizes on field visits as a mode of understanding and appreciating plants for their varied physical attributes. Students learn to classify plant materials based on various uses in landscape design and understand in detail, aspects such as shape, form, size, habit, branching pattern, flower, foliage, fruit, growth requirements and seasonal variations including scientific nomenclature. As a part of the course the students will be visiting many gardens, institutional campuses and other selected areas which have a rich collection of flora in and around the city of Ahmedabad.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction Lecture - CEPT Campus site visit
Week 2	Nomenclature, life span, Appreciation of Plants - CEPT CAMPUS and NORTH LAWNS site visit
Week 3	Plant classification - lecture Part 1
Week 4	Plant classification - lecture Part 2 Indoor plants, hanging baskets, seasonal, weeds, mangroves, carnivorous plants, Leaf - Morphology, Tree habit, Roots, Bark, Flower - Morphology, Other methods of reproduction
Week 5	Introduction to semester end assignment and Site Visit - CEPT CAMPUS South Lawns and GIDC Bhavan
Week 6	Site Visit - LAW Garden
Week 7	General discussion session on plants and their physical attributes based on site observations
Week 8	Site Visit - Parimal Garden
Week 9	Students presentation on identification of Native trees and plants and Introduction to assignment 2 - Plant inventory
Week 10	Site Visit - Serenity Library
Week 11	Site visit - Manekbaug Lokvan
Week 12	Lecture - Growing conditions (Soil, Light, Temperature), Landscape Values, Discussion on Assignment Progress
Week 13	Site Visit - Plant Nursery

Week 14	Site visit - Avenue plantations/ Residential neighborhoods/ Urban fringes of Ahmedabad , Tree value mapping
Week 15	Exam - Field Identification of plants, Assignment Submission - Plant Inventory
Week 16	Concluding Lecture - Basic ideas of planting

Monsoon Semester, 2016, Faculty of Management, CEPT University

Code	3053	Course	Fundamentals of Neuroscience and Its Applications in Personal Effectiveness		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

Recent advances in Neuroscience and Neuroimaging have challenged a lot of assumptions about the brain, how it works, human behavior, motivation, learning and how we use the power of our brain and minds. The course does not require a prior understanding or inclination towards Biology but will hopefully build in the participants an appreciation for the fantastic complexity of our brains and the profound simplicity of what drives us and what makes us who we are.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction to the Brain and Brain Development, anthropological connections
Week 2	Neuromyths
Week 3	Left Vs Right, Upstairs vs Downstairs and the Integrated Brain
Week 4	Triune Brain, Handy Model of the Brain and the Limbic System
Week 5	The Synapse, Neural Circuitry and the concept of FLOW
Week 6	Exuberance, Pruning, Neuroplasticity and implications on Career growth choices
Week 7	Reward Pathways, Motivation, Attention, Concentration and role of Dopamine
Week 8	Addictions and the Brain, Pornography - The New Drug and its impact on the Limbic System
Week 9	The Amygdala Hijack, Anger and Stress
Week 10	Communicating in a Work Environment using Brain based strategies - Connect and Redirect, Name it to Tame it, Engage don't Enrage
Week 11	Multitasking, Working Memory and dealing with Choking in Pressure Situations (Interviews, Presentations, Exams)
Week 12	Grey Matter, White Matter, Myelination and the Talent Code (How to grow your talent)
Week 13	Nutrition, the Brain and the Cholesterol Myth
Week 14	Systems Vs Goals, Habit Formation and building a positive Self-Concept

Week 15	Brain based strategies for working in teams and leading teams - mentorship, giving and receiving feedback, appraisals
Week 16	Tying it all together

Winter Semester, 2016, Faculty of Technology, CEPT University

Code	W16FT007	Course	International Workshop - Contemporizing Tribal Arts & Crafts of Madhya Pradesh		
Typology	-	Credits	5	GPA/NonGPA	NonGPA

Long Description :

The Course aims to explore different nature / variety of tribal and traditional handicrafts and propose interventions and new working / design prototypes, which can improve their accessibility / visibility at national and international level. Interventions will comprise design solutions and marketing/branding/business strategies. Idea is to come out with integrated smart solutions, which will make these traditional crafts accommodated in contemporary design market/society. This workshop integrates three main components. 1) International collaboration with ETSAM (Polytechnic University of Madrid, Spain). Professors from ETSAM, Ricardo Montoro and Franca Sonntag along with 15 Spanish students will be joining this course. Exchange students will catalyze knowledge sharing international scenario and different solutions to improve handicraft designs. 2) Exploring tribal regions of Madhya Pradesh (Mandu / Maheshwar/ Omkareshwar). This segment is divided in two phase. 1- Travelling, exploring, understanding and documenting various tribal arts & crafts, along with their techniques and methods. 2- Students are expected to create and elaborate the new concepts with the help of locals, proposing new interventions and ideas to transform this art/handicraft in various ranges of products with their marketing strategies. 3) Extended travel experience and visits to nearby tourist landmarks. To achieve completed experience, students will enjoy architectural trips to nearby architectural land marks and experience life style of locals.

Daily Plan & Assessment :

Days	Exercise Description
Day 1	LECTURE & STUDIO - Warming up and orientation. First day students will be acquainted about traditional art techniques in comparison of global and contemporary design and its trends.
Day 2	STUDIO- Understand the context and the scope of the course. After 3 pm, departure for Madhya Pradesh (Based on number participants shared private bus would be rented to make journey economical and comfortable)
Day 3	SITE VISIT - JHABUA DISTRICT- Focus - Tribal paintings and Clay pottery handicraft
Day 4	SITE VISIT - MANDU/BIDWAD- Focus - Tribal paintings and Clay pottery handicraft
Day 5	SITE VISIT - MANDU/BIDWAD - Focus -Bamboo handicraft and clay pottery
Day 6	SITE VISIT - MAHESHWAR - textile handicraft
Day 7	SITE VISIT - MAHESHWAR- textile handicraft
Day 8	SITE VISIT - OMKARESHWAR / MANDAV - textile handicraft , bamboo handicraft and clay pottery

Day 9	SITE VISIT - OMKARESHWAR / MANDAV - textile handicraft , bamboo handicraft and clay pottery
Day 10	WAY BACK -MADHYA PRADESH TO AHMEDABAD
Day 11	STUDIO -Compilation of information , Preparation of presentations/ final documents
Day 13	STUDIO -Compilation of information , Preparation of presentations/ final documents
Day 14	STUDIO -Compilation of information , Preparation of presentations/ final documents

Spring Semester, 2017, Faculty of Architecture, CEPT University

Code	1045	Course	Structures- IV		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

Learning Goals: • Development of understanding of structural systems in concrete and steel as a structural material and its application in design • To familiarize the students about the philosophy of design methods in structural steel and reinforced concrete

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Importance of material and form in structures
Week 2	Concrete and Steel as structural materials
Week 3	History of concrete
Week 4	History of steel
Week 5	Properties of concrete as a structural material
Week 6	Properties of steel as a structural material
Week 7	Structural design philosophy of steel and concrete
Week 8	Structural design philosophy of steel and concrete
Week 9	Development of structural systems in concrete
Week 10	Development of structural systems in steel
Week 11	Element design in concrete
Week 12	Element design in concrete
Week 13	Element design in concrete
Week 14	Element design in steel
Week 15	Element design in steel
Week 16	Element design in steel

Spring Semester, 2017, Faculty of Architecture, CEPT University

Code	1047-B	Course	Vertical Studio - Working Drawings		
Typology	Studio	Credits	8	GPA/NonGPA	NonGPA

Long Description :

The studio focuses on the significant role of working drawings in order to convey and communicate design ideas. Motivated students are encouraged to get involved in the process of developing innovative design solutions by exploring various possibilities in the construction industry. The approach to design and drawing would engage the domains of building material assemblies, construction system and constantly evolving building technology.

Spring Semester, 2017, Faculty of Architecture, CEPT University

Code	1048	Course	History of Architecture: 1960s to the Present		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

Architects in today's world deal with a wide range of issues which include a very fast pace of development in technology, the concerns for the environment, the high degree of imbalances in society, particularly in India, and the range of materials and systems available to put together a building. The course will highlight the various issues present in the contemporary discourse of architecture through the texts as well as the built projects. Input lectures on specific current issues like sustainability / environmental friendly architecture, digital architecture, social concerns, conservation, materials and structure will include theoretical premises and examples of actual built works. The input sessions will be followed by student led discussions in various formats. Guest lecturers will be invited where required to enrich the classroom learning.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Readings in architectural theory that determined the deviation from the dominant Modern Architecture will be discussed and the context understood. This will prepare the base for the next part of the course.
Week 2	Readings in architectural theory that determined the deviation from the dominant Modern Architecture will be discussed and the context understood. This will prepare the base for the next part of the course.
Week 3	Readings in architectural theory that determined the deviation from the dominant Modern Architecture will be discussed and the context understood. This will prepare the base for the next part of the course.
Week 4	Readings in architectural theory that determined the deviation from the dominant Modern Architecture will be discussed and the context understood. This will prepare the base for the next part of the course.
Week 5	The question of addressing social concerns like inequity, public space, accessibility including social housing, social institutions at various scales.
Week 6	The question of addressing social concerns like inequity, public space, accessibility including social housing, social institutions at various scales.
Week 7	The question of addressing social concerns like inequity, public space, accessibility including social housing, social institutions at various scales.
Week 8	Concerns with the environment – the various practices.
Week 9	Concerns with the environment – the various practices.

Week 10	Class discussion
Week 11	Conservation – various positions, debates, theories and approaches.
Week 12	Conservation – various positions, debates, theories and approaches.
Week 13	Material explorations - development through time.
Week 14	Material explorations - contemporary practises.
Week 15	Technology - the digital paradigm.
Week 16	Globalization and urbanization - an introduction.

Spring Semester, 2017, Faculty of Architecture, CEPT University

Code	1099	Course	Sustainable Design		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

The course would have one and a half hour input session, followed by a discussion to clarify terms and concepts introduced during the input sessions. The overall duration of the course is in three parts - the understanding of 'the state of the earth' with reference to ones own footprint, reactions from various fields and specific architectural responses.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction to the Course, Discussions on the 'idea' of comfort, Discussion on the 'condition of the environment', Clarifying the terms used in the discussion and their origin. Exercise 1: Identify your favorite building to study for its environmental relationship (20% grades).
Week 2	Important thoughts and directions of environmentalism through history (Malthus, Rousseau, Emerson, Shelley, Ruskin, Morris, Thoreau, Darwin, Marsh, Muir, Steiner, Geddes, Leopold, Carsen, Rudofsky, Mumford, Meadows, Naess, Schumacher, Fathy, Lovelock, Bruntland, Papanek).
Week 3	'Shades of Green'; Various architectural approaches in response to issues of sustainability
Week 4	Strategies of sustainable design. Mainstream approaches to design and technology.
Week 5	Deep Ecology. Discussions on architectural approaches in an eco-centric paradigm (Edible Architecture, Transition Cities). Design with a Gandhian approach to Sustainable Development.
Week 6	Community-centric Approaches to Design (Co-housing, Co-design). Systems Approach to Sustainable Design (Cradle to Cradle).
Week 7	Bio-climatic approaches (Passive Design, Active systems), Technology-centric approaches (Zero-Carbon, Net-Zero), Alternative Technologies.
Week 8	Presentation by Surya Kakani: Specific process of his practice.
Week 9	Presentation by Uday Andare: Specific process of his practice.
Week 10	Presentation by Mehul Bhatt: Specific process of his practice.
Week 11	Lessons from the Vernacular (Invited Lecture)
Week 12	Approaches to designing landscapes (Invited lecture)

Week 13	Presentation by UG students on their case studies.
Week 14	Presentation by UG students on their case studies.
Week 15	Discussion on the papers by the masters students
Week 16	Discussion on the papers by the masters students

Spring Semester, 2017, Faculty of Architecture, CEPT University

Code	1120	Course	Notions of Domesticity and Their Historic Trajectories		
Typology	Lecture	Credits	2	GPA/NonGPA	NonGPA

Long Description :

The familiarity with the word 'home' and the 'domestic' blinds us to the transitions in the notions of domesticity across time. Using plans of homes as a lens, this lecture based course shall focus on the myriad meanings of domesticity in history and the current notions of domesticity. Homes from primarily Europe, the US, and India will be discussed to analyze this transition.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Four rooms: kitchen, bathroom, bedroom, living room
Week 2	Four rooms: kitchen, bathroom, bedroom, living room
Week 3	Home and comfort: archetypes of home in different climatic conditions
Week 4	Home and privacy: the inside and the outside
Week 5	Gender and domesticity
Week 6	Home: sites of production or sites of consumption?
Week 7	Assignment presentation
Week 8	Assignment presentation
Week 9	Production of the house: from self built to catalog ordering
Week 10	Every inch matters: dimensions and activity
Week 11	What's in a name: the naming of rooms and housing types
Week 12	Assignment presentation
Week 13	Assignment presentation
Week 14	House in the city: land, ownership, legality and security
Week 15	Where is my house? identity and repetition in housing
Week 16	Concluding discussions

Spring Semester, 2017, Faculty of Ahmedabad University, CEPT University

Code	AU27	Course	Women's Writing		
Typology	Lecture	Credits	3	GPA/NonGPA	NonGPA

Long Description :

Women have always been the underclass in a patriarchal society. Their contribution to the development of society has always been underplayed and has been shrouded in silence. There is an urgent need to counter the patriarchal discourse which perceives women to be weak and dependent. This paper seeks to open up women's voices which have begun to speak up for themselves and are standing up to be counted. It is felt that in a world where women are coming into their own, their voices need to be heard, their message needs to be understood, and their achievements need to be acknowledged and celebrated. Do men and women write differently? Do women and men write about different subjects? Are their experiences so varied that it constitute different expressions of creativity? Is there any need to interpret these creative expressions? Is there any need to interrogate gender through writing and seek for lesser known realities? The course talks about a parallel world of realities where gender play a significant role in shaping these realities. Students who are aware of the word 'gender' and think that it affects our day-to-day lives and more importantly our creative expressions are meant for this course. The course is a study of writings like short stories, poems, essays, articles by women and understanding them through the theories of gender and feminism. The course will also give a glimpse of other creative expressions by women like photography, paintings and films.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction to Gendered Writing Objectives of the course and Sensitization to Gender
Week 2	Objectives of the course and Sensitization to Gender Introduction to gender theories
Week 3	Introduction to Women's Writing Women and Marriage
Week 4	Women and Marriage
Week 5	Women and Marriage
Week 6	He for She Women and her body
Week 7	MID SEMESTER
Week 8	Women and her body
Week 9	Maya Angelou – Phenomenal Woman
Week 10	Maya Angelou – Phenomenal Woman, Reflections
Week 11	Expert Lecture Women and Society
Week 12	Women and Society

Week 13	Women and Individuality
Week 14	Class Test Women and Individuality
Week 15	Women and Individuality Expert Lecture
Week 16	A group discussion

Spring Semester, 2017, Faculty of Architecture, CEPT University

Code	1649	Course	The GREEN MOSAIC		
Typology	Lecture	Credits	3	GPA/NonGPA	NonGPA

Long Description :

Green Mosaics and Biodiversity is the variety and richness of living organisms (including genetic variation) and habitat diversity found in and on the edge of human settlements. This biodiversity ranges from the rural fringe to the urban core. At the landscape and habitat level it includes - Remnants of natural landscapes i.e. leftovers of primeval forests; Traditional agricultural landscapes like meadows, areas of arable land and lastly Urban-landscapes i.e. city centers, residential areas, industrial parks, railway areas, formal parks and gardens, etc.) (Secretariat of the Convention on Biological Diversity (2012) Cities and Biodiversity Outlook. Montreal). The habits of urban dwellers will largely determine the health of our ecosystems and the survival of biodiversity. Ecosystems regulate not only the supply but also the quality of water, air, and soil. Ecosystems in urban areas also serve as habitats for species and as storehouses for genetic diversity. Biodiversity in cities exposes people to nature and thereby facilitates an appreciation of nature. It also provides opportunities for recreation, health and relaxation, and community cohesion. It has been shown that the psychological benefits of green space increase with biodiversity. This course is aimed at introducing the concept of Urban Biodiversity. Through class room sessions and field visits, students will begin to appreciate the presence of a rich biodiversity in urban areas and also what beneficial roles do natural ecosystems play in cities and how urban planning can enhance this experience. Main focus will be upon areas where there is strong co-relation between built and nature. This elective will serve as a bridge between Architecture and Landscape. Students will be asked to take up suitable Institutional building sites in and around Ahmedabad to carry out detailed study assignments, which will look at inter-relationships between manmade urban systems, architecture and biodiversity. It can be looked upon as a complex network of living organisms, which is very well fitted in the network of urban infrastructure. This can be a different approach of looking at "URBAN BIODIVERSITY". There will be in total 16 sessions (lecture + site visits), which will have the following working schedule. Conceptual/Theoretical Understanding: During these theory/ seminar sessions and field visits we will give brief idea about the concepts related to Ecosystem, Ecogreen mosaic, Biodiversity, Threats in urban areas, Case study mitigation, Climate change, Economics of environment (tangible/ intangible). There will also be seminar based study and reading assignment related to case studies specific to inter relationship between flora, fauna and built environment. Techniques of mapping (Qualitative and Quantitative): During these sessions, we shall explore ways, methods and techniques to map the quantitative data and the qualitative (intangible) features of Green Mosaics. Main idea here is to help one portray the natural character of site and justify one's understandings. Strategic approach / Guidelines: Of the chosen site/ case study, the student will try and think of strategic approach or guidelines for enhancing or enriching the green mosaic.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction + Field visit to ATIRA campus* (Assignment 1)

Week 2	Theory session (Concepts of Ecology, Ecosystems, Habitats and Habitat fragmentation, Biodiversity) followed by Discussion regarding Assignment. Introduce reading topics/ assignment
Week 3	Practical methods of mapping (Quadrant study, Typology, Representation techniques, and other methods of mapping) on CEPT campus (Assignment 2). Introduce Final assignment topic and site
Week 4	Final assignment Site visit (do photographic documentation on site)
Week 5	Site documentation presentation
Week 6	Reading assignment presentation (part 1) (Assignment 3)
Week 7	Reading assignment presentation (part 2)
Week 8	Reading assignment presentation (part 3)
Week 9	Theory session (Threats to biodiversity in Urban areas, Climate change) followed by discussion of chosen site
Week 10	Field visit (Assignment 4)
Week 11	Presentation of field work followed by Theory session (Architecture and Nature: Biodiversity in built spaces)
Week 12	Documentation and methods of visual representation
Week 13	Theory session (Economics of Environment) followed by discussion of Final assignment
Week 14	Compilation and presentation final assignment
Week 15	Discussion and Submission of Final Assignment (Assignment 5)
Week 16	Concluding session

Code	1046	Course	Professional Practice		
Typology	Courses	Credits	2	GPA/NonGPA	NonGPA

Long Description :

This course contributes towards preparing the student with adequate information about the professional practice, in particular the early stages and the various models of a design practice. The course will discuss the role of the various members of a team that contribute towards the execution of a design project and the relation of the architect with the members.

Learning Outcomes :

After completing the Courses, the student will be able to :

- The students should have an overview of the various components of a professional practice, and understand their role as professionals, in particular with reference to the ethics and code of conduct. The students will acquire knowledge and skills sufficient for early stages of directed activity in an existing practice or be able to initiate a practice of their own. The students will be exposed to the basics of legalities of contracts.

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Introduction; starting out in design practice - a career or a calling? Understanding different models
Week 2	Establishing a team – members of a team, their roles and responsibilities. Being a team leader
Week 3	Understanding the client; who are we building for?
Week 4	Developing a brief, understanding the clients need and interpretation in appropriate direction.
Week 5	Communication Methods, processes, requirements, locations
Week 6	Procurement: Tendering process
Week 7	Contracts: Develop an understanding of framing contracts with various agencies, their components, aspects to focus on and their administration
Week 8	Architect's Act, Council of Architecture and its role in current situation. The discussion will take care of historical perspectives of COA formation and its present role.
Week 9	Collaboration Participating in competitions: Collaboration with other organisation or consultants
Week 10	Discussion on professionalism ethics and codes of conduct
Week 11	Discussion on professionalism ethics and codes of conduct
Week 12	Final assignment: a skit / drama

Week 13	No lectures per new schedule
Week 14	No lectures per new schedule
Week 15	No lectures per new schedule
Week 16	No lectures per new schedule

Monsoon Semester, 2018, Faculty of Architecture, CEPT University

Code	1143	Course	Research Methods		
Typology	Courses	Credits	2	GPA/NonGPA	NonGPA

Long Description :

The design process invariably includes a research component. This usually takes the form of 'case studies' of buildings and physical description of site. The full potential of research in informing design is left untapped by the above mentioned methods. This introductory course in research methods familiarizes students with components of research in the field of design. The course will familiarize students to various components of research such as framing a research proposal, analyzing architecture, and writing a research document. The course will be conducted through a series of in-class exercises and session specific reading material.

Learning Outcomes :

After completing the Courses, the student will be able to :

- Students will be able to- 1. critique research proposals 2. analyze works of architecture 3. formulate a research proposal

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Recognizing the difference between data, information, knowledge, and wisdom [DIKW]. Operations required to convert data to information, information to knowledge, and knowledge to wisdom.
Week 2	Different ways of analyzing architecture: examples of architectural analysis
Week 3	Different ways of analyzing architecture: framework of analysis
Week 4	Finding a research topic- literature search, literature review, identifying gaps in existing research. Personal interest, observed phenomena as starting points.
Week 5	Identifying a research title. 'Narrowing' area/focus of research
Week 6	Aim, objective, hypothesis and research question
Week 7	Aim, objective, hypothesis, and research question continued
Week 8	Components of the research proposal
Week 9	Correlation of framework of analysis, research method and analysis output
Week 10	Writing the research document: structure and chapterization
Week 11	Writing the research document: language and formats
Week 12	Exam

Week 13	NA
Week 14	NA
Week 15	NA
Week 16	NA

Monsoon Semester, 2018, Faculty of Architecture, CEPT University

Code	1145-E	Course	Spaces for place, people and programme		
Typology	Studio	Credits	14	GPA/NonGPA	NonGPA

Long Description :

Nature of projects we'd be glad to mentor: a) Urban Insert – sympathetic insert in an existing fabric with concerns for tradition and modernity, existing grammar and harmonizing with surroundings. b) Urban Redevelopment Eg. Waterfront development, civic spaces, urban voids and transportation networks c) Sustainable Campus development – in a nature predominated setting. d) Adaptive Reuse in an architecturally significant pre-existing structure – Additions/ alterations with sufficient spatial modulations. e) Timeless space making – exploring phenomenological spaces that are emotionally engaging and enriching. Eg. Memorials, Museums, crematoriums etc

Learning Outcomes :

After completing the Courses, the student will be able to :

--

Weekly Plan & Assessment :

Weeks	Exercise Description
Week 1	Finalisation of Brief and Site selection.
Week 2	Academic Exploration of the phenomenon and site context. Output – Sketches, Installations and Collages
Week 3	Academic Exploration of the phenomenon and site context. Output – Sketches, Installations and Collages
Week 4	Group discussions and input lectures Preliminary Spatial Explorations and 3d Volumetric Co-ordination Output – Development of site plan, massing models& landscaping (Integration of natural elements and site specific components)
Week 5	Group discussions and input lectures Preliminary Spatial Explorations and 3d Volumetric Co-ordination Output – Development of site plan, massing models& landscaping (Integration of natural elements and site specific components)
Week 6	Group discussions and input lectures Preliminary Spatial Explorations and 3d Volumetric Co-ordination Output – Development of site plan, massing models& landscaping (Integration of natural elements and site specific components)
Week 7	Functional Detailing and Structural Co-ordination
Week 8	Functional Detailing and Structural Co-ordination
Week 9	Design Seminar Lectures, Inputs based on topics by resource personnel – emphasis on 3D process models and multimedia aspects

Week 10	Design Seminar Lectures, Inputs based on topics by resource personnel – emphasis on 3D process models and multimedia aspects
Week 11	Design Development and Final Internal Jury
Week 12	Design Development and Final Internal Jury
Week 13	Design Improvement and portfolio presentation
Week 14	Design Improvement and portfolio presentation
Week 15	Exhibition Presentation and Class Documentation
Week 16	Exhibition Presentation and Class Documentation

Spring Semester, 2019, Faculty of Architecture, CEPT University
