■ **Course Average(COR AVG):** This is the average of the total responses for this course. For example, for Studio IV, out of total 32 students 28 have responded, the Average represents the mean of all 28 responses.

■ **Individual Average(IND AVG):** This is the average score of the total responses for this instructor. For example, for Studio IV, out of total 32 students 28 have responded, the Average represents the mean of all 28 responses.

■ **Faculty Average(FAC AVG):** This is the average of all responses for similar course type within the Faculty. For example, Faculty average of Studio IV offered by FA, represents the mean of all responses for Studio courses offered in FA during the given semester.

Scale : 1-3: Unsatisfactory, 4-6: Average, 7-8: Good, 9: Very Good, 10: Excellent

Course Comments

Sr No.	Comments
1	v good
2	Good.
3	Good course
4	.
5	The course was like a refreshment subject.It was a logical subject and helped in improving engineering economics.
6	There could be more content taught in the course with more realistic data based projects and examples to gain practical insights with more such theory than just textbook problems.
7	was useful but the faculty should should specify the pre requisites of the coures.

Instructor Comments

Instructor Name: Rajesh Matta

Sr No.	Comments
1	v good
2	Good.
3	Please give more assignments, sir. This subject requires lot of practice to keep the fundamentals clear. But overall, sir did a good job in clearing the fundamentals and doubts, in class itself.
4	course should be more interactive and content of the course should be revised,(addition of some more topics)
5	Good Instructor
6	.
7	Some concepts although being explained by the faculty remained unclear..
8	Prof.Rajesh Matta did his part well.
9	He is very fair and a good teacher. However, he could deliver more content, in the given time to make optimum use and learn more concepts with optimum time utilization.
10	helpful.

Course Comments

Sr No.	Comments
1	Good.
2	Well, a very interesting subject, but not well structured. May be not monitored well as the subject included design of staircase as well but was not carried out during the semester. Time constraints had this, only if each submissions were well timed and were stringently checked. Efforts seem to fall in vain and may be our final reports go there as well.
3	the course was a huge mess. no co ordination between the faculties, faculties used to come late and no prior information provided.
4	Course is good. Studio work makes sense. Needs to be structured properly. Deadlines should be clearly followed. Workload should be distributed properly along the 17 weeks. Staircase analysis and design not taught. Should be included. Too many faculties and AAs. Everyone teaching some different way of analysis made everything confusing. No at very less coordination among them all. A case of "Too many cooks spoil the soup". Also Course outline should have been properly followed.
5	.
6	I was very excited about learning this course but the concepts about some topics remained unclear. The faculty and the TA's gave different solution to same problem. So a lot of confusion was created for designing certain elements. Also STAAD pro should be taught more in class.
7	RCC is a design studio subject. It helped in understanding the concepts much better.
8	The course could be structured in a still better way. Groups of five was indeed a better step, and yet only a single person ended up doing the group's work creating a lot of frustration and stress.
9	The course was not well structured. Timeline of course was not followed. Instructors did not teach properly. Every student was given different instructions. In between assignments were not at all evaluated. TAs did not even come to collect timely submitted assignments and then did not even check it. Thus there was no advantage for those who submitted on time. There was only miscommunication between faculties and TAs. Most of the time TAs taught and their concepts were not clear. They were not knowing what to teach. Also some things were left for the students to be done without teaching. All 4 of them were teaching same things differently contradictory to each other. Since course was based on a single project many important RCC design theories were not covered especially foundations. Had to learn most of the things from net rather than the faculties and TA.
10	The studio was not in line with the predetermined timeline and also failed to achieve all the objectives. It should include more aspects like staircase design. The final deliverable in the form of jury did not assess the understanding of an individual and hence examination should be taken so that each student is evaluated based on their own understanding and not just group work.

Instructor Comments

Instructor Name: Anal Sheth

Sr No.	Comments
1	There were always different sets of instructions whenever a student approaches. Instructions were not well communicated.
2	Good.
3	Needs to plan the course properly.
4	.
5	Prof. Anal Sheth did her part well.
6	It was felt that she failed to devote sufficient time to the course. there was a lot of miscommunication and lack of co-ordination between all faculties and academic associates. the deliverables were not discussed internally priorly which led to confusions and delay. a lot could be taught more whereas most of the studio time was not utilized properly.

1	Good.
2	Talks very fast. And when told to talk slow, doesn't follow it through. Has good knowledge.
3	till now perfect faculty for all structure subject.
4	Prod Bhavik Patel was good and had a wonderful conceptual knowledge to share. He should teach at a time and discuss the entire topic rather than doing it in parts.
5	Barely 3 to 4 hours of interaction and teaching has happened to him in the entire course. he was excellent with concepts and teaching but never maintained the schedule. He was busy most of the time.

1	The outline of The course included many things out of which all were not covered in the lecture duration. Also the assignment of Business Proposal is not suitable for students who don't want it in their future. The course outline and assignments given can be bit changed.
2	The course had nothing to teach with startup. It was like a joker playing in circus and people making fun of it. You don't teach in this way, making fun of others and questioning their ability to work well in life. To an extent, the entire startup thing was a big fat joke on the face. Great work !!!
3	More expert lectures would have been better.
4	None
5	Negative
6	good
7	The course includes startup assignment which is not more helpful to us because not all the students want to start a startup. If it is necessary than it should simultaneously during whole semester with small another assignments. Other than this start up, assignments were very interesting.
8	The course could have incorporated more elements of the professional practices in the industry.
9	Instead of ethics , it only focused on start ups.
10	Good
11	The subject was well taught and we'll structured.

Instructor Comments

Instructor Name: Devanshu Pandit

Sr No.	Comments
1	Seriously ethics from him ???? CEPT can do better.
2	He teaches well.
3	None
4	good
5	Partial towards few students.
6	Extremely partial grading!
7	Excellent
8	Devshusir has taught us very well and he provided us great knowledge regarding our subject.

1	Certain topics which were said that the professor will cover, was not actually delivered in some areas.
2	good and informative elective
3	Not Structured Properly! Disappointed with the course outline.
4	Technical and required concepts for an engineer were not taught. Course should be in depth.

Instructor Comments

Instructor Name: Somabhai Naik

Sr No.	Comments
1	Good faculty but did not teach required technical theories. Faculty doesnot know concept of TA. For eg - we had to do a port visit and faculty wanted the students to arrange for everything. In such cases TA should arrange for the visit. But faculty did not understand concept of TA so did not instruct TA to help out. As a result there was no port visit. On the contrary TA was also not having any knowledge about this subject and not even helpful or interested in arranging port visit. Selection of TA should be done properly and not for the only sake of checking files haphazardly.

Course Comments

Sr No.	Comments
1	The topic is very interesting and can be put to practical use ,However the course structure includes only basics topics.It can further be modified to add current green energy and introducing latest technological advancement so that students are aware of market scenario as well.
2	This course was just a basic introduction of different renewable energy, like reading a Wikipedia page or internet surfing. There was nothing new about any renewable technologies, no practical aspect of renewable technology were taught. Lectures were really boring & we don't know on what basics marking was done, because no benefit was given on timely submission of assignments as students submitted the assignments even 2 weeks late.

Instructor Comments

Instructor Name: Rajendrasinh Pardeshi

Sr No.	Comments
1	bad
2	The course is conducted is purely theory oriented so please include some different ways of imparting knowledge and conducting classes with practical ,student involvement can be further encouraged.
3	The instructor was good, he really had an ample of knowledge about the subject. But, the course is designed really boring. I expected some practical & cost structure of these technologies which could have helped us in taking decisions in future professional life. Like Cost of Solar PV panel to generate 1kW of energy or how to select the best renewable technology for your site.
4	as per the rule book of cept university, required attendance is 85% which was lowered by 50% during this semester, which is not beneficial to students, rules are meant to follow, i was not allowed for exams for low attendance. which is injustice. all the students who had attendance below 85 % could have been treated in same manner.

1	good
2	good
3	In depth knowledge should be provided.and please do not provide lecture of continuous 3 hours. this is theory subject its require attention. so please divide lecture in parts.
4	this course requires to be paid some special attention.course content is so much that it is difficult to complete it in such short duration,credits of the course can be increased and more time should be given to this course

Instructor Comments

Instructor Name: Dipsha Shah

Sr No.	Comments
1	always eager to solve our doubts and concepts
2	Need better involvement and communication skills
3	nice
4	Please,sessions were held as per scheduled time.
5	Ma'am cannot communicate with students properly and this chaos is created. Also requires are breaks in a 3hr class
6	Faculty has been amazing throughout the course. Presentations, site visits, etc have helped us a lot. in all I am having a good grip over the subject. Thank you!
7	Course is good but the content is too much ,and the faculty is not able to convey the course content properly
8	She does not pay attention towards an individual student's performance and ability to understand what she teaches. Teaches hurriedly. And gives a lot of assignments in a single go making it difficult to understand and complete the assignment on time. And in exam paper, she gives marks only for the right answer and do not give marks for correct procedure.

Course Comments

Sr No.	Comments
1	The course is helpful as a Post graduate base course.
2	Good
3	The entire MS project component of the course was a massive waste of time. We did not get satisfactory feedback on any of our assignments. Case studies from reputed institutions like Harvard should be used as a part of the course. There is too much theory in the delivery right now.
4	Theory classes should preferably not go on for more than an hour. Scientifically, 40 mins is the maximum time a brain concentrates. Please do see to it.
5	PM is my favourite subject and even I want to continue my master's in this particular field only. I am thus very satisfied with this course, and the way my professor's taught this subject.
6	This is the worst management related course in CEPT. How do you expect us to learn management by teaching it all theory and no practicals? MS project was a the only thing sensible I learnt. Also for the theory part, atleast make PPTs short, simple and interactive.
7	.
8	The course outline was very interesting but as the lectures progressed it became very monotonous. The expert lectures were very informative, maybe BIM and/or primavera could be included next time instead of MSP since no one uses MSP nowadays.

Instructor Name: Devanshu Pandit

Sr No.	Comments
1	Sir is an epitome of knowledge and delivers perfect knowledge that is required for the students. The faculty understands a students thought process and teaches descriptively. The sessions are extremely interesting and helps the students to relate to actual practical knowledge.
2	it would be better to learn if it were a bit more interactive
3	Good.
4	Devanshu sir helped me collecting my fundamentals and have raised my interest for this subject. He is very good at teaching this subject, with lot's of experience and teaching with full efforts. He also helped in sticking to basics, which is very necessary while learning the subject.
5	Very boring and monotonous lectures. Please inculcate some managment games and activities in it
6	Everytime I expect great things from this very good instructor and everytime he greatly disappoints me. He taught a management subject completely in theory when he should have included teaching via doing some activities related to the course.
7	.

1	Avg.
2	Main agenda of this course was to have a certain idea about structures who are in a bad condition and need to be rehabilitated/restored. Majorly everything for this was covered pretty well in the semester. Apart from that, I will wish that more laboratory tests should be included in the course and not just 4 tests, if possible.
3	Guest lectures very helpful. Timings to meet external advisor should be provided
4	Good course.
5	.
6	Not much was taught in class. All the submission were accepted to be submitted on time but the corrections were only given at the end. If the corrections were given parelley to the submissions than some better work could have been done.
7	The course was good enough to help in understanding the basic concepts about the failures in RCC structures.
8	The course should have been made more challenging by providing case studies by the faculty for the studio where all the acquired knowledge could be applied. The application of acquired knowledge was very minimal.

Instructor Comments

Instructor Name: Pavni Pandya

Sr No.	Comments
1	Very poor teaching.
2	She covered the course very nice and gave regular feedbacks too. Questions raised were addressed properly as well.
3	She is not having sufficient knowledge about her subject. She is having double standards about teachings. She is not eligible for being teacher in this prestigious institute. She is not having proper English fluency.
4	Good faculty.
5	.
6	Not proper faculty for this subject. We don't know but quiet partial with particular students. Teaching method is not well, she only read presentation in class and explain it same as it is. Not satisfied, students need more perfect faculty for this subject because subject is to important to understand very well.
7	Very very partial
8	Prof.Pavni Pandhya did her part well.

Course Comments

Sr No.	Comments
1	This course is a very lengthy course and shall not be floated as elective for post graduation level. This is totally not relevant.
2	Good course content !!! Really loved and enjoyed this subject and mainly the numericals being taught to us were damn excellent and helpful!!!
3	The course was well structured.
4	Boom!!!!!!!!!
5	good
6	Had the opportunity of learning new things. The course is well structured.
7	gOOD
8	The bridge engineering course was really great regarding understanding the concepts of bridges.

Instructor Comments

Instructor Name: NISARG SHAH

Sr No.	Comments
1	The knowledge and the skills to deal with practical situations of bridge engineering was excellent. But the teacher cancels the scheduled classes , takes extra lectures at odd times then. The faculty teaches in Gujarati and if one is not known of the language it creates a deficit of interest in the ongoing class and the interest in the subject is lost. Also the linking of the concept is lost.
2	Excellent Faculty..!! Never saw such a helpful faculty..!! Helped us right through the course and the way the long numericals taught to us were damn excellent..!!
3	He teaches excellent.
4	Jordar, Jackass, Excellent, Fantastic
5	He is always late by 1/2 hr.
6	good
7	The course was taught well. It would be better if more practice sums were provided. The sums are difficult to grasp hence completing just prior to examinations makes it difficult to understand and learn. Also, it would be better if different types such as 6 piles etc. were too made to practice once before exams
8	Good
9	Nisargsir has taught us really good regarding the subject and he has solved many problems of us regarding the subject.

1	My expectations from the course was a bit different. It taught me majorly basic things, which was great though I required more emphasis on writing skills
2	excellent subject and content of course
3	One of the most teaching and developing course of individual skills along with different types of exercises assigned. It is a Well needed course for everyone.
4	I learnt a lot from this course, apart from academics it's very necessary for us to speak well, dress well our body language is so very important when we communicate. It was an excellent course
5	The studio as well the workshop course we're better than expected and really helped me increase my practical knowledge of materials.
6	I learned many things in this course !! This course i think was good and i improved my communicating skills by attending this course.

Instructor Comments

Instructor Name: Pervin Doctor

Sr No.	Comments
1	Pervin ma'am have supreme knowledge about the subject. Her teaching techniques were easy to understand
2	excellent
3	She taught us very welland her subject was very effective
4	She is the Perfect professor for the following course.
5	She was very friendly with us, I could ask any doubt very frankly, She would answer so well. Her teaching was so very good
6	The Cs course conducted by her was good. I enjoyed and got the knowledge in her course
7	This course helped me grow over my stage fear as well develop certain communication skills thanks to our professor Pervin Doctor.
8	I learned many things in this course ma'am !! Verbal and Non-Verbal exercises were my favourite and communicating in front of people building that confidence in me which i wanted from a long time was achieved. Please accept my grammatical mistakes in the above sentence i need to work on that but overall feedback to you ma'am it was a very good and informative lectures by you ma'am. An inspiration to your students i would like to add cause when you teach you completely get into it and make us all very attentive and we also get interested in what you teach !!

■ **Course Average(COR AVG):** This is the average of the total responses for this course. For example, for Studio IV, out of total 32 students 28 have responded, the Average represents the mean of all 28 responses.

■ **Individual Average(IND AVG):** This is the average score of the total responses for this instructor. For example, for Studio IV, out of total 32 students 28 have responded, the Average represents the mean of all 28 responses.

■ **Faculty Average(FAC AVG):** This is the average of all responses for similar course type within the Faculty. For example, Faculty average of Studio IV offered by FA, represents the mean of all responses for Studio courses offered in FA during the given semester.

Scale : 1-3: Unsatisfactory, 4-6: Average, 7-8: Good, 9: Very Good, 10: Excellent

Course Comments

Sr No.	Comments
1	Very helpful in knowing different soil properties.
2	The course content was good and relevant for this level of education.
3	nice.
4	both practical and theory part should not be combined in a single subject and if combined proper attendance for the practical and separate marking for the practicals should be done.
5	The course is not helpful for civil engineers.

Instructor Comments

Instructor Name: Komal Parikh

Sr No.	Comments
1	none
2	She was really cooperative.
3	Always remained helpful.
4	verygood
5	Poor quality of teaching should not be assigned as an faculty ni course outline doubt clearing session
6	faculty should delibratetly schedule 1-2 lectures before every exams and should have proper timed submissions for the repeat students.
7	The instructor was not well prepared for the session. The instructor was not have proper knowledge about the course. The instructor was only read and speaking from powerpoint presentation and not explained properly.

1	More focus on clearing the concepts rather than completing the course, this should be taken care of! for which more classes should be allotted. otherwise everything else was decent enough.
2	She made the course little bit interesting and she gave her best
3	solves the doubts frequently.
4	She has sufficient knowledge about the topics but is not able to deliver them in correct manner. Practical sessions were way more better to understand than the theory sessions. Theory sessions were confusing and difficult to grasp for me.

1	The most interesting subject.
2	this course as helped, by introducing initial level of analyzing of various structural elements like truss, slab and beam, column, arches. More exposure could have been given in the same field by going a level bit higher than the current level. regarding the portfolio submission the format should have been decided in prior and should have considered it on a serious note since the beginning.
3	Wasn't a subject for structure it wasn't sufficient as an structures subject couldn't clear any concept
4	The course show have maximum two faculties, because during teaching time all faculties are give different answers for students problems. Students make their portfolio four times, it is biggest time wasting part of this course, which could be done in one portfolio. Facilities have not communicate with each other. During jury time jurors gives correction in portfolio, which is totally opposite to which faculties have taught.
5	This was the very first time that studio course was implemented , well it is a very useful subject but it was not planned properly because of which it was a little problematic for us to cope up, may be a more precise planning can make difference.
6	The course was very interesting and we gained practical knowledge by solving different examples with help of different faculties
7	structure course is basically that we know abt the structures so dont make it studio course .
8	very interesting course.
9	Very difficult course , make it a bit easier to understand. Very tough concepts and problems.
10	Making this course an studio course made things very complicated for us and the faculties were not clear on how would they delivering the course content and how they would be evaluating us what submission they should expect from us. At the end of semester we were told that our final assessment would be on the portfolio.
11	ok

1	He is very kind and solved my doubts in proper way.
2	he has always encouraged in critical thinking and always provided alternatives to our problem.
3	He wasn't there for any session after only a 1 hour lecture like it was been he was there for 10 to 11 only that's also it was like forcefully
4	Good
5	His teaching was perfect! All the things were clearly understood in his sessions
6	explains everything in detail and very effectively.
7	The class was divided into two batches and for doubt solving sessions he was available only for batch 1 .i.e. from uc0116 till uc4916
8	If CEPT has faculty like parth thaker and anal sheth why we need external faculty? I don't think that CEPT required any external faculty for this course. He just came in to class, write whole sum and teach us. I don't think that any student could get that properly.
9	Good job sir

1	She was helpful.
2	has always helped whenever needed.
3	Not eligible as the faculty of structures just coming for the students attendance and submission and creating doubts instead of clearing them Sorry she is also not clear about the concepts.
4	The instructor was not well prepared for the session. The instructor was not have proper knowledge about the course.
5	SHE IS NOT ABLE TO GIVE US KNOWLEDGE OF THIS COURSE OTHER THREE FACULTIES HAVE DONE THEIR JOB EFFICIENTLY BUT THIS FACULTY IS ALSO NOT ABLE TO GIVE PROPER GUIDANCE ABOUT PORTFOLIO AND OTHER SUBMISSIONS. SO PLEASE BE HELPFUL SO OUR UPCOMING BATCH DO NOT FACE SUCH PROBLEMS.
6	All the doubts were cleared during her sessions
7	she is a very good instructor and teacher.
8	She unnecessarily did not allow students to enter the class for even 5 minute delay because of which our learning and attendance was affected. Study material for the subject was also not shared timely with the class.
9	Cannot just understand and grasp what she says. She has sufficient knowledge but cannot convey it in proper manner
10	please remove this faculty . she dont know any teaching methods. acting with us like a school childrens.

Course Comments

Sr No.	Comments
1	the division of groups according to code numbers is not appropriate. in a group of 7 people, only 2-3 members really work. this creates problems for division of work and hence, we should be given a choice to form groups which will also increase our efficiency to work.
2	this course helped to understand concrete
3	i have experienced in this course that in a group of 6-7 people only 2-3 people were seriously dedicated and interested but were forced to not study to their potential because of extra work load caused by the other inactive group members and still getting the same marks.It is highly unfair to the interested students. The potential of the exploration in the course is highly constrained by this unsystematic, unfair and illogical distribution.
4	nice.
5	As the whole semester work is a group project, students should be allowed to choose group by their own as it affects our grading and overall performance and outcome. The outcome of the reports which we made was expected in form of word, power point, poster, etc but the data in it was ultimately same so this portion was not clear. Instead of repeating same old material testing which was there in 1st year also, new topics must have been taken.
6	course is useful for the field work.
7	this course helped to develop the understanding in a more better way .only one flaw that the group formulation choice should be given to us ,as only some people work during the entire semester and some don't.
8	During this course, the faculties should allow the students to make their groups on their own. because there were many groups this time, where out of 7, only 2-3 people work with dedication as they was not proper settlement within the group, and the other members were forced to do their work which at last they don't even do it properly, which makes the 2-3 proper persons to check their work twice before uploading. So, i request the faculties to allow the students to make their own groups.

1	worst faculty sbst can ever have. i dont understand why do you even have such faculty.he does not have a sense of a teacher rather than asking technical questions in jury he says why havent you written kilogram as Kg rather than KG. unless faculty please we give a lot of ,money atleast mandatory subjects should not be taught by such useless teachers.
2	he dont teaches us nice .
3	parth sir made us understand each and every concept related to mix design and concrete.
4	good
5	Please divide the group properly,Because in the group some member not work properly.
6	content presented was not satisfactorily explained. Also some topics were covered very fast. Importance of the each and every test should be discussed in class and then should be allowed for practical leading to better understanding and proper test performance.
7	The faculty was unreasonable at times and.lacked basic sense of understanding.the situations which created even more problems.

Instead of repeating same old material testing which was there in 1st year also, new topics must have been taken.
6	course is useful for the field work.
7	this course helped to develop the understanding in a more better way .only one flaw that the group formulation choice should be given to us ,as only some people work during the entire semester and some don't.
8	During this course, the faculties should allow the students to make their groups on their own. because there were many groups this time, where out of 7, only 2-3 people work with dedication as they was not proper settlement within the group, and the other members were forced to do their work which at last they don't even do it properly, which makes the 2-3 proper persons to check their work twice before uploading. So, i request the faculties to allow the students to make their own groups.

Instructor Comments

Instructor Name: Bhargav Tewar

1	The requirement of data for project course could have been informed to students prior their project Training in order for better Data collection and Availability.
2	The course was well structured.
3	Should be before project training.
4	good
5	The course was interesting. It would be helpful if before the project training a brief on the things a student must concentrate on is provided such as vendor selection, purchase systems etc. It becomes difficult during the course to then go back and learn these systems. Also, in the jury, project training activities must not be allowed. This is unfair to other students. They are presenting activities which they have already done in project training which gives them a plus point which is not fair to others.
6	Good
7	The subject was well designed and we'll taught in the class and it made me understand all the important things about any project.

Instructor Comments***Instructor Name: Reshma Shah***

Sr No.	Comments
1	Ma to ma che, ma to mamta dekhade. At the end, she will fight for what is right and in the favor of students. Great work ma'am!! One more thing is a presentation which is supposed to be of 7 minutes should not take 1 and half lecture.
2	She teaches well.
3	The best faculty in SBST, She helps students in each and every situation unlike other faculties.
4	good
5	Good
6	Reshma mam taught us really good and she has given her best to make us understand the subject.

7	The course was good.

Instructor Comments

Instructor Name: Ami Divatia

Sr No.	Comments
1	Ma'am as far as teaching is concerned is good. Now one main thing is that we didn't practice any software except for excel which we are supposed to. Now that's a bit of problem because even in the exam we knew nothing of the cross table. These kinds of things should be avoided.
2	She teaches excellent.
3	good
4	The various analysis were taught well. It would be helpful if more were taught such as SPSS, chi-square tests etc. Her part is of importance and worth learning. There was some miscommunication in the exams and she asked tests which she had not taught. This needs to be avoided in future.
5	Average
6	Animal has taught us really good.

Instructor Comments

Instructor Name: Ganesh A. Devkar

Sr No.	Comments
1	The instructor was not efficient as he couldn't make eye contact with students.
2	the language of the instructor was a bit high to understand what he meant to explain. (vocabulary was too good) was not effective in making the students understand what he wanted to deliver.
3	To be very straight sir, NEVER EVER form groups on the basis of roll number. That's the worst system FT is into. Either you allow the students to form group by themselves or make a random group provided it is actually random.
4	No comments.
5	Please give him some suggestion or instruction about HOW TO TAKE LECTURES? Continuous SPEAKING without break... (I think he is eligible person for Guinness Book of World Record for continuous speaking)
6	good
7	This part was not taught satisfactorily. Expected more but did not learn much. The study material provided needs to be made more understandable. The presentations especially use a difficult language which I failed to grasp. NVIVO project was good, got to learn something new.
8	be a bit more practical. grow some more skills of explaining.

Course Comments

Sr No.	Comments
1	Excellent
2	wasn't according to the brief at all
3	Excellent course. I learnt much more to sketch live drawing.
4	Nice elective. They taught us live sketching with point perspective very well.
5	The course needs to be modified keeping the technical aspect into consideration.
6	1 course will be very helpful to me because courses are important.
7	Learned a lot
8	FIRSTLY IT WASN'T EXPLORING SKETCHING SKILLS, WE WEREN'T ALLOWED TO USE MEDIUMS OF OUR CHOICE. THERE WAS MUCH TIME WASTED IN JUST SITTING IN THE CLASS AND COMPLETING THE SKETCH, IT WOULD HAVE BEEN RATHER GOOD IF WE WENT TO SKETCH EVERYTIME OR EVERY ALTERNATE LECTURE, THERE WAS A LOT OF SPOON FEEDING. IT WOULD BE GOOD IF THE COURSE MENTIONED "ONLY FOR FT 1ST YEAR" SO THAT WE COULD GET TO KNOW WHAT WOULD BE DONE IN THE WHOLE SEM.
9	THE NAME OF SUBJECT WAS EXPLORING SKETCHING SKILLS BUT WE DIDN'T EXPLORE ANY NEW MEDIUMS AND ANY NEW TECHNIQUES. IT WAS SIMPLE SKETCHING CLASS WHICH DIDN'T HAVE ANY NEW LEARNING.

Instructor Comments

Instructor Name: SOHA TRIVEDI

Sr No.	Comments
1	Excellent
2	She was guiding us well in every session and was giving her 100%.
3	Was less encouraging and less supportive; was unnecessarily critical, overcritical and was always stressed and annoyed.
4	1 good feedback on my problem thank you for helping me.
5	Nice
6	The faculty was always on our head if we were late by even 10 mins. Treating students equally should be a professor's first priority whereas this was never the case. Always partial decision was passed and some students were treated very badly.

1	A different and a helpful course for gaining practical knowledge about construction technology.
2	the exposure was excellent and has helped a lot in understanding the structural elements.
3	Before observation of different construction activities directly on site, faculties should have explain each in detail,so after the lecture students go their site and will observe activity, so it can helpful to students to understanding activity properly.

Instructor Comments

Instructor Name: Mahesh Bhavsar

1	Before every visit on friday a class should be conducted , to give an overview about each activity that what details are to be collected from site and what should be focussed upon, so students are more clear about the activity beforehand. otherwise the best course of entire semester!
2	Very effective for field work.
3	Was challenging of course and easy to understand on site and difficult to convey to sir in presentation form

Instructor Comments

Instructor Name: Bhargav Tewar

Course Comments

Sr No.	Comments
1	The coordination between two faculty members was lacking during the course period, which created much confusion for the submissions.
2	Our studio course so well, in my 1st SEMESTER I got so much knowledge regarding materials
3	This course was very helpfull to get the basic knowledge related to materials used and why they are used and what advantages and disadvantages of that particular material is, i think this course was very good and informative !!
4	Engineering material course is best course to know about materials needed in construction. It gives us knowledge about materials and much more .
5	Perfect mandatory course for new comers. Not very easy, not very difficult in fact interesting in terms of practical knowledge, pan lectures, onsite visits and manufacturing plant visits. Learnt how to communicate on site, how questions should be asked, etc. Main thing that when no one where there to guide or answer us then how to understand ourselves the thing; that understanding and knowledge was given by our respected faculties and TA. Overall learnt many things from this course.
6	A really great course and this course needs to be definitely taught in greater depth. This is because this would be setting up the base which needs to be strong for a successful professional.
7	.

Instructor Comments

Instructor Name: Pavni Pandya

Sr No.	Comments
1	Pavni mam is good teacher and she teaches good but at tje time of submission she didn't give extension even for a valid reason
2	The professor well communicated all the concepts and delivered the knowledge properly. Well guided everything, and suited well for the position.
3	She so perfectly taught as each and everything. She was having much more knowledge so nicely I could understand everything
4	The way you teach is very good ma'am, i gained as much as i could and i am trying to improve too, it was very very informative and interesting, i had doubts which you cleared it excellently ma'am.
5	Best faculty for this course. She explains us every topic with great efforts .
6	Very nicely explained all theory lectures. Onsite projects of house and other than it I.e. hotel where difference is you will be able to get all answers of what questions asked and other is you need to get answer by own because no one is to answer or guide you. Both projects were informative and interesting. Also understood well about fly ash bricks manufacturing in practical because we have been to a Fly ash brick factor visit with mam.
7	1 helped all over all subject and correction all subject related problem thanks help for me pavni maam.

1	Nice course for the development of skills in various materials.
2	This is the best course. Welding laser cutting so many such things were taught in 1st sem only
3	it was a very good and creative course !!
4	Perfect course which gives us physical work which is important in construction technology course.
5	The best subject in first sem. Something else comparative to other subjects. Hard work, technique, skills and smart work gives you perfect result. We were demonstrated how to carve, mould, etc. We were also demonstrated to some of the machines. From all above it was very interesting and playful subject.
6	usually sbst was not more into workshops but it is a very good initiative for the introduction of workshop but our models and work could not complete with the work done by architecture and sid students because they were allowed to use each and every machine while we had to do the same things with restricted instrumentsand we were not introduced to machines like jig saw and wood cutters etc ...so i would really appreciate if the mentioned things are taken care for the coming batch

Instructor Comments

Instructor Name: SOHA TRIVEDI

Sr No.	Comments
1	She did an excellent job in teaching and instructed so well
2	Thanks you ma'am for all your efforts you put in me and your help as well !!
3	Explains us importance of course and to give our best to course.
4	overcritical, unethical, has demoralising effect on student
5	They instructed us to all assignments clearly and helped us to make assignments more better.
6	the only problem with soha ma'am is that she thinks only SID and Architecture students can do good and creative work sbst students cannot which is a wrong concept and this is not only for soha ma'am but all the departments thinks the same ...so the students as well as the faculties has to work on the same . And due to the same thinking we are not respected in campus .while we can also do good work and we really worked hard in the workshop

1	Nice course for the development of skills in various materials.
2	This is the best course. Welding laser cutting so many such things were taught in 1st sem only
3	it was a very good and creative course !!
4	Perfect course which gives us physical work which is important in construction technology course.
5	The best subject in first sem. Something else comparative to other subjects. Hard work, technique, skills and smart work gives you perfect result. We were demonstrated how to carve, mould, etc. We were also demonstrated to some of the machines. From all above it was very interesting and playful subject.
6	usually sbst was not more into workshops but it is a very good initiative for the introduction of workshop but our models and work could not complete with the work done by architecture and sid students because they were allowed to use each and every machine while we had to do the same things with restricted instrumentsand we were not introduced to machines like jig saw and wood cutters etc ...so i would really appreciate if the mentioned things are taken care for the coming batch

Instructor Comments

Instructor Name: Chandra Bhakuni

Sr No.	Comments
1	Chandra sir is good but he breaks our model for no reason even its good or bad it does not matter to him, he just broke it
2	He is having very innovative idea
3	Perfect is the word I'd like to say about you Chandra Sir, you've been an inspiration and you opened my mind to think on innovative ideas which were great !! thank you sir for all your guidance and help..
4	He have innovative ideas .
5	Very interesting faculty. Just different from all. He always helped us to do our best and make out a very attractive thing from assignments given.

1	Professor guided perfectly for the course, and taught course excellently. No problem was found during any of the sessions.
2	He was supportive system to this course .
3	Sir i learned many things the first is to listen the instructions given carefully and then and then only perform the experiment, second is you are a true inspiration for me you teach so good makes me get interested in the topic you teach at that moment and i listen to it with all heart !! Sir, Thank You for changing me and making me improve !! I will give my best in the coming years and make you proud !!

Course Comments

Sr No.	Comments
1	Although the subject was very interesting but I feel it could have been delivered in a much better way.
2	Its necessary to understand that the students have had several site visits in their early courses, so in future please understand the need of students and then propose the site visits which would be new to the students and which they have not visited before.
3	The course structure was different and the never course never went along with it never had proper class outline it always uses to jump from topic to topic irrelevant to the flow.It was always had random discussions on SEZ and proceeded along that way and is always carried out.
4	Its a good subject to learn about the practical aspects in the field of SEZ planning.
5	good
6	Expected more information about the planning and management of an SEZ like the course title mentioned.

Instructor Comments

Instructor Name: Kailash Bahuguna

Sr No.	Comments
1	At the beginning, the studios were very interesting and the site visits were amazing. I learnt a lot out of it. But the deliverable (exams) were not satisfactory.
2	The class always was very random without any proper schedule always carried out never allowed us to use books for noting down important points and even never gave any notes for the examination. so the subject was very broad not along to the course outline produced earlier
3	It was good experience to learn some good stuff under sir.
4	A different way of learning lead the students to no use of the subject. And irregularity makes student lazy. Should improve the methodology of teaching.
5	good
6	To the point. Practical approach while teaching. Good knowledge about the course.

Course Comments

Sr No.	Comments
1	Learning erp by theory was good but there should be any practical exposure. If its expensive for semeater acess for students then shere should be exposure foe week or two weeks.
2	The elective should have the practical hands-on with the ERP software. Just theoretical information is not sufficient.
3	good
4	good
5	The course was well structured. However the only issue was class at 8 in the morning. Such courses should be allotted in afternoon time slots so that the chance to be late for class are less.
6	Very necessary and foundation course for construction management field. Can be included in mandatory subject also.
7	The teaching methodology could have been more precise and not just a reading of the presentations prepared. The actual usage of the software first hand would have helped in gaining further in depth knowledge rather than just seeing its functions and usage on presentations and not getting to use it.
8	Excellent

Instructor Comments

Instructor Name: Ashvin Oza

Sr No.	Comments
1	Faculty taught it very effectively. Learning was veey effective and usefull.
2	good
3	excellent teacher
4	Ashvin Sir did a great job and were really well versed with the subject. He made us think on aspects that were not thought of.
5	Full of knowledge in his field. Timing of the class should be arranged in the afternoon, not in the morning.
6	Timing should be changed. He is a great faculty and provided us a lot of knowledge of ERP.
7	He attitude towards teaching the subject is amazing, even it being a morning 8am class, he was always there at 7.30am, he is crisp in what he says and has a good hold of the subject, its just that he was not able to provide the practical knowledge of the software but just the theoretical part of it. That was the only drawback otherwise rest he was fairly good at his job.
8	Excellent
9	Very Humble and Knowledegable professor always ready to help you with you're doubts

Course Comments

Sr No.	Comments
1	The course was very nice and helped us in getting knowledge about the contracts which are present and different types of contracts which are available and how to deal with different types of contracts overall it was a very nice learning experience about what all types of contracts are available in construction and how to deal with each type of contract.
2	Though I am not from the same department, Though my journey is scary, Though I found assignments tough and challenging, Consuming a lot of my time -I can confidently say that I have something to take away from this course. THIS COURSE IS WORTH THE EFFORT.
3	This course improved by contractual aspects and gave me confidence to even draft an TENDER.
4	Subject was not relevant for final sem. It would have been better if taught during 1-2 sem.
5	good
6	Excellent
7	It could be changed to a 3 credit course as I felt the instructor could have done more justice with a longer time slot
8	this subject should be taught before PPP, so that student know how to look into case studies and importance of contract document.
9	Good

Instructor Comments

Instructor Name: Reshma Shah

Sr No.	Comments
1	Reshma mam is an excellent teacher and the way she communicates and deals with a student is exceptional, her practical knowledge helped us a lot to know about the types of contracts which exists and also her guest lectures were full of immense knowledge helped us to get to know in more detail about contract types and procedures behind every contract, overall it was a very nice learning experience.
2	Resourceful, Encouraging, and Friendly - Prof. Reshma Shah was one of the best professors I've ever met. There are many evenings that she patiently explained me, clearing every little doubt in the topic. Thank you, mam.
3	Ma'am taught the subject very well & made contacts interesting. The assignments & exam were challenging & interesting at the same time.
4	Very good faculty
5	Awesome
6	good
7	Excellent
8	She was simply brilliant
9	Reshma Ma'am is a very learned person and has delivered the lecture in a practical approach by taking various case studies. It was a great experience to have studied the subject under her guidance.
10	good

1	This is a course which created a deep sense of thinking and understanding on the Environment field. Learnt many new techniques. Also there should be some more case studies
2	The class was perfect for basic understanding on EIA. The exercises and guest lectures were interesting and beneficial
3	was very helpful.
4	A very valid course. More guest lectures would be ideal
5	the assignments were really challenging and made us think about what we were doing and why we were doing it. Overall the assignments increased our knowledge about the subject.
6	The course was very interesting but few site visits and practical methods of teaching could be integrated. Also, the scope of work in the field of EIA and required qualifications and skillset required for it could have been discussed and taught.
7	The course was very interesting and helpful for understanding EIA in detail.
8	Good Course.

Instructor Comments

Instructor Name: Tushar Bose

Sr No.	Comments
1	Awesome faculty , he delivers his pool of knowledge very nicely.
2	Tushar sir had provided simple but interesting exercises and his explanations were clear and specific
3	very good teacher.
4	Sir tried his best to make the subject more and more interesting.
5	Prof Tushar was effective in communicating concepts however he could have provided supplementary case studies and reading material before and after sessions for better and detail understanding of concepts as the presentations were not very detailed.
6	He was very clear about the topic which he teaches.
7	Best Faculty.

■ **Course Average(COR AVG):** This is the average of the total responses for this course. For example, for Studio IV, out of total 32 students 28 have responded, the Average represents the mean of all 28 responses.

■ **Individual Average(IND AVG):** This is the average score of the total responses for this instructor. For example, for Studio IV, out of total 32 students 28 have responded, the Average represents the mean of all 28 responses.

■ **Faculty Average(FAC AVG):** This is the average of all responses for similar course type within the Faculty. For example, Faculty average of Studio IV offered by FA, represents the mean of all responses for Studio courses offered in FA during the given semester.

Scale : 1-3: Unsatisfactory, 4-6: Average, 7-8: Good, 9: Very Good, 10: Excellent

Course Comments

Sr No.	Comments
1	Excellent course curriculum for the understanding of the basic principle of remote sensing.
2	Had very good experience.
3	The course is well designed but an introduction to 'programmatically handling satellite data' would have been more useful with respect to state of the art techniques used in the industry.
4	It provides good foundation for developing analytical skills and helps in providing hands on exposure in understanding satellite data.
5	The course gave me a glimpse about the remote sensing and the practicals were very interesting.

Instructor Comments

Instructor Name: Bindi Dave

Sr No.	Comments
1	Excellent theoretical knowledge delivered.
2	she has a unique approach towards teaching. I appreciate the fact she has very keen observation about students performance.
3	Though some of the assignments she gave us felt a little irrelevant, but she also gave one of the best assignments that I have come across this semester which had changed the way I perceived the subject.
4	She's very patient with the students and yet keeps a perfect tab of time at hand. She let's all students explore the subject on their own apart from teaching it herself. I've rarely come across a professor with such knowledge and a benevolent nature.
5	Good
6	Was very very supportive to elective students. Explain each and every things very basically to us . And a very very helpful.
7	Prof Bindi Dave did her part well. She explains well.

Course Comments

Sr No.	Comments
1	nice course
2	Had lot of expectations from the course. It failed to deliver the same. It was just a theory based course.
3	So so
4	The outline of the course was very different then what was taught. no practicals were conducted during the course and no other information provided regarding the application of big data. The course has only two written exams and no practicals or any process. He only flaunts his own project that wasn't relevant to course. Hence no new skills acquired during the course, its complete waste of my time and energy...
5	The course addresses the student community and the multidisciplinary setting of the institution but could be made more useful and interesting by adding practical sessions with codes and debugging.

Instructor Comments

Instructor Name: Virat Kothari

Sr No.	Comments
1	nice course , good learnings
2	The communication skills of the instructor is not upto the mark. The dull teaching style of instructor does not help develop interest in the subject.
3	...
4	He is a man with only words.. talk talk talk and no information. He starts some ppt that has some information about the subject and then he is lost in his own world of talking that is irrelevant. total waste of time, as he is not even bothered if someone is sleeping in the class...
5	Very nice faculty with years of experience in the domain.

1	Course is good and every student of MSED should take this but, it should be included in even semester rather than in odd semester. Because Subject - CONSTRUCTION FAILURES should be taught before this subject and for the 1st year student it can not be possible only if Subject - CONSTRUCTION FAILURES provides odd in 1st year and Subject - ERS provides in even semester. so, that 1st year student can take Subject - CONSTRUCTION FAILURES in 1st semester and Subject - ERS in 2nd semester.
2	Good.

1	Sir gave us very good knowledge, there is no doubts in that. but he is not able to judge individual contribution work in group. Throughout the semester i enjoyed work but at last appreciation was always under one person favour which was not true. I feel partiality while discussing work. Even during final presentation what I feel is many people answered well, but he got impressed with any one people. And the person who talks more that also worked more is completely not true. So the subject was good, teaching was the best till now from all the subjects, but response and appreciation was very bad.
2	One of the best faculty at CEPT.
3	no differences made as per grading between a dull and bright students.

1	The course is definitely one of its kind and clearly is the near future as I see it. More site visits could have definitely helped. Building solar cooker is not the only way to learn the concepts, and I felt at some point product took away more focus than understanding the concepts.
2	The course is good formulated but the grading methodology and categories based on which grading is done could be made more transparent. A few site visits, practical case study visits and industry expert sessions could be integrated into the Passive comfort lab course as they were completely lacking and would have been good for a change from regular classroom learning and have provided more exposure.
3	The course was really good. We learn different aspects through guest lectures, experiments, data collection, analysis & designing a product called Solar Cooker.
4	I have not seen any course which teaches in this much detail and the topic which it covers are very interesting. This course changes your perception or I can say correct your perception of designing a building. This course teaches the correct way buildings should be made and we can actually calculate everything. This course gave me a sense how critically we should analyze the data or information to take the right decision.
5	This actually helped me in understanding the basics for BEP, at the same time increasing my interest for the same.
6	It was an extensive learning related to the basic concepts involved in Building Energy Performance. All the details provided initially were adhered to, but few topics like natural ventilation, passive design strategies, etc. were not taught in as much detail.

Instructor Comments

Instructor Name: Sanyogita Manu

Sr No.	Comments
1	The overall sessions were good. But, it would have been better if the sessions were more elaborate and the faculties could be more patient. We definitely couldn't achieve level of perfection if she wasn't there, but there could be a different approach too.
2	The professor was good in teaching certain topics of her expertise and in general presentation and guidance on assignments. She could have been more patient in her dealings with the students and could have participated more in student development and for providing extra opportunities apart from course syllabus. Being the course coordinator, she could have been more involved in the entire semester by proposing some site visits, industry expert sessions and case study visits as part of the course. Also, in general, the way of communicating could have been more positive and encouraging and constructive rather than being negative and discourage the students who are working hard and doing the best they can. We have come here to learn and it would be good if the faculty supports us in this by being helpful and positive. All this helps in coping with the work pressure.
3	The instructor was good. But the level of strictness was really high which made the learning process torturous. There was no appreciation for any of our work, & all the time there was a warning of probation till the mid-sem results. Assignments were good, and we have learned a lot after the hard time, but time period given for some of the assignments was not enough as some assignments involved experiments & analysis.
4	She was very supportive, whenever we have any problem regarding any topic or in curriculum she always helped. She is moody too, sometimes got very angry about little things. But the fact is, She drags you for work which seems little harsh but she did that for the betterment of the student. At the end, we can actually realize that if she did not drag us we can not achieve the level of work we did under her supervision. She is very professional and made our level so that we also work professionally.

1	The sessions were great and quite interesting. Faculty was quite helpful and understanding. Was a great learning overall.
2	It was a great experience to be taught by Prof Rajan. He was very involved and exposed us to a lot of other stuff apart from the course outline. Brilliant exposure was provided by him on the scope of this course and field and simulation software.
3	I personally enjoyed the sessions taken by Professor, the webinars organized by him were interesting & related to our subject, which helped us to visualize the extent of our study. We were involved in designing of our assignments which made them interesting for all of us. The comments & reviews of our assignments was really short & to the point. There was no boring presentations of assignments, else the time was devoted in learning more by involving students in giving comments to each others work in class. This helped us learning how to evaluate your own assignments before submissions.
4	Prof. Rajan is very confident personality and the knowledge base he has is great. I haven't seen such a person who is very professional about his work. He explains everything in such a manner that students grab everything which he wants to convey. His assignments were framed in such a way that they became interesting and involve students view also in framing the assignments which make them clear to students and students gives 100% in assignments. Personally, i have learned many things from him and he is very frank with students and down to earth too.
5	I hope we were able to meet up to your expectation of running one good simulation at the end of the semester.

Course Comments

Sr No.	Comments
1	The course is definitely one of its kind and clearly is the near future as I see it. More site visits could have definitely helped. Building solar cooker is not the only way to learn the concepts, and I felt at some point product took away more focus than understanding the concepts.
2	The course is good formulated but the grading methodology and categories based on which grading is done could be made more transparent. A few site visits, practical case study visits and industry expert sessions could be integrated into the Passive comfort lab course as they were completely lacking and would have been good for a change from regular classroom learning and have provided more exposure.
3	The course was really good. We learn different aspects through guest lectures, experiments, data collection, analysis & designing a product called Solar Cooker.
4	I have not seen any course which teaches in this much detail and the topic which it covers are very interesting. This course changes your perception or I can say correct your perception of designing a building. This course teaches the correct way buildings should be made and we can actually calculate everything. This course gave me a sense how critically we should analyze the data or information to take the right decision.
5	This actually helped me in understanding the basics for BEP, at the same time increasing my interest for the same.
6	It was an extensive learning related to the basic concepts involved in Building Energy Performance. All the details provided initially were adhered to, but few topics like natural ventilation, passive design strategies, etc. were not taught in as much detail.

Instructor Comments

Instructor Name: Rashmin Damle

Sr No.	Comments
1	The faculty helped in understanding the concepts in a nice way. Was helpful in case of queries and was fun learning.
2	Prof Rashmin is a very good instructor and effectively communicated the concepts. He could have made the study more practical by including some site visits. He resolved the queries very well and had a positive attitude and gave constructive feedback.
3	Sir was very good in teaching. He was always available for our queries. Assignments were drafted really well and was simple yet tricky which we enjoyed solving. His sessions was also interesting and the slides shared by him helped us a lot.
4	He was clear in concepts which he teaches. He explains topic till every student get it and very helpful outside the classroom also if any doubt we have.

1	Was a great experience overall. Got to learn a lot of new things, digging into concepts a bit deeper.
2	The first half of the course was very informative and a lot was learnt about building energy concepts such as passive strategies, energy audit, energy codes etc. compared to second half as only one concept of building performance evaluation was discussed and involved single assignment in the second half. It later got saturating to keep doing iterations of the same thing again and again. I did not get to learn much from the second half of the course.
3	This course was divided into two parts - before & after mid-sem. The complete course was designed good. In first half we learned how to select passive strategies during conceptual stages and in second half we learned Building Performance Evaluation, which was completed practical. So, the course was interesting throughout the semester.
4	The course was very helpful in understanding the concept of green buildings. Gave an introduction to the different rating system and actual scenario of the market. Learnt many things that we design should be built as per design.
5	First part of the course was amazing with lot of workload. Second half must be reworked again.

Instructor Comments

Instructor Name: Sanyogita Manu

Sr No.	Comments
1	The concepts or classes she orally taught were not even countable, she just uploads readings on the drive, we never know that there are readings to do, coz we dot have any information about them. none of the readings were explained or looked back.I could never try talking to her because shez not so welcoming, her sessions helped me just to correct script mistakes in my reports, but didn't add any value to my knowledge.
2	was a great experience overall. Was able to apply the learnt knowledge in practice and minute details of the project.
3	Constructive feedback was provided by her on the various iterations of the assignment done, however, the concepts of various sections of building performance evaluation were not taught very clearly and effectively. She could have discussed few more case studies and good practices before we started working on it. I did not learn as much as I had expected from the professor and her section of the course.
4	The instructor doesn't demonstrated sufficient knowledge of the subject she was teaching and the questions were not answered properly. There was such a strict environment during the course, that students were scared to ask questions. Every new session she had a different set of comments, we used to make changes in the submissions as per previous comments & in the next class she forgot her comments, & gave new suggestions on the submissions.
5	She taught many things. She made us work professionally. Without her, we can not do our assignment so professionally.
6	In the second part of the course we felt confused and didn't know how are we going to finish the evaluation of library.

1	Thought provoking process with Rational & creative reasoning.
2	Was a great experience overall. Learnt a lot!
3	Prof Prasad Vaidya was very involved and made the lectures and the course very interesting. He effectively addressed the queries and exposed us to various concepts apart from the prescribed syllabus. He had a positive and encouraging attitude all through and provided constructive feedback.
4	The ultimate professor of Building Energy Performance. He is the best instructor anybody can ask for, having ocean of knowledge and chilling way of teaching. He was always available for our queries, and with the dedication he gave us the comments on our assignments, was commendable. The comments was in so much detail that we never has expected, and always there were links or suggestions to learn from the mistakes. In general sessions, students used to learn 50%-60% of the things taught, but with Prasad sir we have learn a lot more than that.
5	The way he teaches is one of its kind. He teaches very professionally and the way he makes understand things is superb. He was always encouraging students during curriculum and if moral of any student is getting down he boost up the student. GREAT PERSONALITY
6	In the major assignment where reduction of EPI via different strategies were to be shown, that calculation part was not properly explained in the class.

Course Comments

Sr No.	Comments
1	add case study
2	This course could have been better in terms of making us learn what a cost manager has to do in each phase of a project, right from beginning till the end of the project. This course was a part of elective and it should not be kept open for 1st semester students as they face challenges in understanding the concepts as compared to the students of 3rd semester. Most of the students are fresher's and thus lack knowledge in knowing the estimates and how to control the cost.
3	This course gives the practical idea about the things that actually happens at site.
4	the course seems to be relevant mostly for the students of 3rd semester as many of the aspects were largely covered in the previous semester. hence the outline of the course should be improved and should be made more compatible for the students who have opted it in the 1st semester and have a limited knowledge of the advanced curriculum as well as the relevant field exposure.
5	practical and full of knowledge
6	It is good course and learnt a lot from it. Should be continued for the next batch.
7	The course was designed good, but you need to learn some basics of Project management for this course, or else this course will be difficult to learn. Overall this course is good.

Instructor Comments

Instructor Name: Amar Sanghvi

Sr No.	Comments
1	good
2	He is very knowledgeable in his area of teaching but somewhere he is not able to connect with the students and half of the class is full of doubts. I would suggest him to keep things simple and instead of showing excel sheets that are not visible to the students, he should explain the need of these sheets and when and why we should follow them.
3	The instructor was very good in giving ideas about the course.
4	The course was interesting but it should be taught with some basics for fresher graduates. Fresher Graduates has very less experience about sites so they must be taught with basics and a continuity must be maintained in order to understand the subsequent topic.
5	overall , the sessions conducted were very educating and it helped students learn a lot of important aspects about the various field aspects that one might come across. only one improvement required in the instructor is that more emphasis and in depth discussions should be encouraged as to keep in view of the students who have difficulty grasping the curriculum that goes at bit of a faster pace than one might naturally want to. and also some amount of material for self study should be generated in order to make students clear and be able to track their progress.
6	very good and explaining
7	Sir taught us very well and it was good to learn all the things from practical point of view. The lectures were interacting so it helped to develop the thinking about the topic that is discussed.
8	The professor was having a excellent knowledge of the subject which is learned through practical problems. He taught us really well and whatever he has taught no one can found it in any book. the sessions were more like of open discussion which made it interesting.

1	The first part of the course helped to understand the concepts of daylighting and artificial lighting through experiential learning. The second part of the course was a culmination of the topics learned from the past 2 semesters and also exposed to new methods of understanding the functioning of each building system in detail. Thus, overall this course was very challenging and the helped to develop analytical skills.

Course Comments

Sr No.	Comments
1	interesting
2	The course is an interesting course but needs to more interrelated to Construction Industry. Sometimes the objectives and how and where the teachings of the course will be applied in real life situations gets confusing. The course didn't teach relevance of why it needs to be studied as Project Manager and lacked relevance with CEM and hence sometimes the outcomes of the class were not well understood and as a result could not generate a lot of interest.
3	The course is very important for the students doing CEM as it helps them to use different strategies during different course of time. This subject though is kinda boring but once we start linking it with our past experience, it becomes more interesting.
4	The course is very interesting but at the same time its very irrelevant for the MCEM students. A more practical subject must be taught in order to get required knowledge about our future carrier.
5	The course failed to deliver any practical knowledge, especially with respect to the construction sector. Concepts were taught without any real time understanding of application in the field. At the end it has just been a series of concepts learnt with no skill or training of personality development.
6	the course largely covers major aspects of business environment and although well designed , it is ineffective in helping students to have some considerable impact which might become helpful. level of the aspects covered seems unnecessarily advanced and also the examination methods are more conventional. the attempt is good to bring some serious insight in students in order to shape them as business professionals , but it doesn't need to be made a mandatory course. a general consensus regarding this course is that it should be offered as an elective.
7	It was very well designed course. Interesting case studies offered by faculty.
8	The course, even tho ibteresting, isn't very relevant to constdution management.

Instructor Comments

Instructor Name: Mamta Tripathi

Sr No.	Comments
1	excellent teacher
2	As an instructor Mamta maam did a good job. She was punctual and explained the concepts really well. She was very well prepared for her sessions and was very professional which was very impressive. She conducted the class really well and with proper decorum. She did a great job in generating interest and understood the problems of students unable to relate to the subject as it was a completely new aspect to study altogether and tried to explain all concepts at ground level. Though as an instructor she satisfied however, the overall course could have been better structured with relevance to CEM.
3	Dr. Mamta Tripathi is very punctual and comes with full preparation every lecture. She has an in-depth knowledge and the best thing about her was that she not being from the construction field explained us the concept with case studies related to Construction industry that helped me a lot and it was very interactive session every time we met. She was one of the best teacher i have ever discovered.
4	She is the best faculty I've ever come across. Her feed backs for me were very helpful to improve upon. She always encouraged the entire class for group participation. She was unable to give more lively examples on the field of construction ; but overall it was good as we studied a new subject
5	The professor is well versed with concepts of strategic management but lacks any sort of knowledge about the constructible industry. Therefore, there was a big gap in the teaching and understanding of practical knowledge. There was no understanding of how these concepts would apply to the industry, or how any of the concepts taught will be of any use or skill development in the future. The classes were taken with a very strict structure with no scope for flexibility, which lead to monotonous theoretical classes which did not fit the structure of the overall course. The professor took leave for a month for which she had to take a number of make up classes which disturbed our work time for other subjects.
6	faculty is undoubtedly the best choice the university could have for the course . all of the required skills as a compatible instructor one should possess are there in the faculty. if the course offered again , faculty's appointment is to be maintained the same in order to keep the quality as per required standards.
7	Very nicely planned sessions and the instructor tried to link the subject with the construction industry also. She gave lot of efforts for better learning of the students.
8	Particular about each and every topic. Every single lecture was designed and planned very accurately and same was executed during all the lectures. This subject has given a new shape to the course. Such type of subject and faculties should be continued for CEM course. Worth studying.
9	As a faculty, she was up to the mark. We have learnt many things that can help us in the future. This was not a technical subject but for understanding the corporate world and how to act as a professional, then it is good to keep this subject. Mamta ma'am had everything in an organised and sorted manner which was very helpful.
10	Extremely well prepared professor.

1	needs to be structured
2	The studio could have been much more clearly structured as its a 9 Credits course. Sometimes the deliverable required were really confusing as to what needs to given as the final output. What are the things that will be taught during the course should have been outlined much more clearly in the first few classes so that the direction of the studio could be understood much better. There were a lot of situations where it felt like lost with whats needed or why is something being taught. There could a more sessions where a few things are taught in an interactive way. The expert lectures conducted in the studio were the most helpful sessions.
3	The course is no doubt the best thing for a master's degree program as it is a foundation course. But instead of doing experimentations that never end, the professors should teach the motive behind why we are learning it. All three professors have their unique way which is obvious but they are not able to explain with examples except examples of roadways/ highways. These professors are technically sound but they don't teach us the foundation part. None of the professors are aware about other professor's part and there was one incident where there was a collision and both ended up with confusion. The course should be clear and projects should be given to the students that makes sense and data is available to them. Its not about data collection, its about making them aware about the objectives of the course.
4	Studio was excellent journey with ups and downs. It was a good experience overall. We enjoyed Devanshu Sir's Class the most as it was lively and full of practical knowledge
5	Really a learning experience working on live project which provides in depth knowledge. But Project distribution should be taken care of such that quantum of every project remains same so that one can easily understand the project and applications of each and every concept taught by faculties. Sometimes it was very hectic with the deadlines so that some of the deliverable were not attended properly by the group which creates very negative impression on faculties. 9 credits were worth studying in this studios. Students should be allowed to make groups on their own and choose the topic of project or multiple numbers of topics should be floated by faculties and students should be given a chance to select topic out of 3-4 options of project.
6	This course is very helpful and it keeps you engaged in work. I have learnt a lot of things apart from assignments. How to handle the pressure situations and how to present your self. And due to timely presentations my fear of facing people has gone. And another good thing about this course is that how to work in group and how to co-ordinate in a group.
7	Covered various topic of development stage. New and challenging topics.

Instructor Comments

Instructor Name: Ganesh A. Devkar

Sr No.	Comments
1	the faculty should try and understand the students and also not demean them everytime. Also the lecture held was always one sided as students critical thinkinf and doubts were not appreciated.
2	Unfortunately there was lot of communication gap between the instructor and students. Because of this a lot of the questions raised during the session were not answered satisfactorily. The questions meant something else but the answers were not relevant to the topic or could not be communicated correctly. The instructor did a good job in organizing his sessions and keeping everyone in loop at mails and giving appropriate instructions time to time. Also the instructor spent time in helping us understand the timeline and time crunch in completing and submitting our assignments which was really supportive and helpful. He did a good job in providing sufficient readings which were helpful. However there can be a lot of improvement in communicating the concepts of the subject and clearing the doubts with a little more patience.
3	He is Ph.D in contracts related subject which means he has tonnes of knowledge in that field and I appreciate his qualification. He has an idea of what has to be taught in the course and sends the relative material on Google drive but in class he is unable to clarify most of the doubts. He always end up giving an example of highway construction and when asked about specific project allotted to us, he is clueless but still he tries to explain and creates a catch 22 situation for the students. At this level of education i personally feel that the professors appointed shall have practical knowledge of atleast 3 years and just degree shall not be evaluated. This is not my personal suggestion but the class has the same feeling. He is good in bringing faculties for evaluation purpose but couldn't help us to meet experts of the projects.
4	The faculty is not effective. The lectures are not interesting. We as a class seek Respected Prof. Devanshu Pandit for the EXECUTION Part in coming Semester.
5	faculty needs to reconsider at a great extent about the methodology of teaching in the classroom. the faculty surely possesses excellent knowledge regarding the aspects covered , but it miserably fails at conveying it properly to the students. also the faculty needs to be more flexible in their approach while working with the students since all of the students have an immense amount of work to complete. the faculty should seriously think and understand that unnecessary delays cost a lot of time and energy on the students' side and some extent of flexibility by faculty can help students to have a better experiences of learning and progressing.
6	The way of conveying the purpose and technique of each exercise was not efficient. Lot of topics were covered most of them were relevant and provided good learning opportunity for the student still the methods or technique of approach was not delivered properly.
7	Sir has tremendous knowledge but unable to communicate properly and to the point. Some of the topics like target value design and procurement approach were really interesting ones. But somehow time didnt allow to work in detail. Sometimes feedback given by sir was not clear. Never appreciates the good work. Again quantum of work was not clearly understood by sir. hoping to learn a lot from sir. Thanks sir for the guidance.
8	He does not bring 100% clarity of any doubt or any topic. He has a lot of knowledge in some fields but students couldn't get proper clarity about some topics.
9	Needs to explain the concepts better.

1	the only effective learning gained in the studio was from him. excellent professor.
2	All the Interactions with Devanshu Sir were learnings in themselves. All the questions asked were satisfactorily answered. He has been one of the best Instructors across all the subjects taught till now. Such Instructors are needed at Masters level who have a practical experience and apply that really well in students work. He directed the studio and the entire course really well and with a much more clear headed thought. He took effort to give extra time in clearing doubts which was really helpful. He maintained the decorum of the class really well. Only suggestion is that the presentations could be graphically a little more interesting. As an instructor he did a great job in understanding the problems the students are facing in decoding the subject and explained solutions accordingly with ground level practical examples. If possible, requesting him to be a part of other studios in following semesters as well.
3	He is clear in his mind and gives feedbacks to the point unlike other professors. He is punctual and knowledgeable about his topics. Here comes a difference when we as students compare two different professors on same grounds. He is way better than other professors. Before giving deliverables he explains the need of those deliverables and if the student or particular group is not clear then he gives flexibility of time where the students can reach and get their doubts solved.
4	Respected Prof. Devanshu Pandit is the best faculty I've ever studied in my educational carrier. He supports and encourages both morally and practically. I surely want to see him in the coming semester. He makes the class lively and interesting by sharing his vast practical experience of the field He is a so called "GURU" for me.
5	He has got deep knowledge in the field and can offer a lot to the students in masters program.
6	Sir should cover the further semesters of CEM, every lecture was fruitful and worth learning. Experience shared by sir in each class and topic were just tremendous. I am hoping to work under his guidance. One can easily relate to the topic taught by sir. Appreciate his efforts towards studio. Thanks sir for the guidance.
7	The way of presenting some things with proper examples is the perfect way. He should teach in 2nd semester also as he has vast field knowledge. Overall experience was excellent.
8	Extremely knowledgeable and made us think for ourselves. Please take next semester for us.

1	needs to be structured
2	The studio could have been much more clearly structured as its a 9 Credits course. Sometimes the deliverable required were really confusing as to what needs to given as the final output. What are the things that will be taught during the course should have been outlined much more clearly in the first few classes so that the direction of the studio could be understood much better. There were a lot of situations where it felt like lost with whats needed or why is something being taught. There could a more sessions where a few things are taught in an interactive way. The expert lectures conducted in the studio were the most helpful sessions.
3	The course is no doubt the best thing for a master's degree program as it is a foundation course. But instead of doing experimentations that never end, the professors should teach the motive behind why we are learning it. All three professors have their unique way which is obvious but they are not able to explain with examples except examples of roadways/ highways. These professors are technically sound but they don't teach us the foundation part. None of the professors are aware about other professor's part and there was one incident where there was a collision and both ended up with confusion. The course should be clear and projects should be given to the students that makes sense and data is available to them. Its not about data collection, its about making them aware about the objectives of the course.
4	Studio was excellent journey with ups and downs. It was a good experience overall. We enjoyed Devanshu Sir's Class the most as it was lively and full of practical knowledge
5	Really a learning experience working on live project which provides in depth knowledge. But Project distribution should be taken care of such that quantum of every project remains same so that one can easily understand the project and applications of each and every concept taught by faculties. Sometimes it was very hectic with the deadlines so that some of the deliverable were not attended properly by the group which creates very negative impression on faculties. 9 credits were worth studying in this studios. Students should be allowed to make groups on their own and choose the topic of project or multiple numbers of topics should be floated by faculties and students should be given a chance to select topic out of 3-4 options of project.
6	This course is very helpful and it keeps you engaged in work. I have learnt a lot of things apart from assignments. How to handle the pressure situations and how to present your self. And due to timely presentations my fear of facing people has gone. And another good thing about this course is that how to work in group and how to co-ordinate in a group.
7	Covered various topic of development stage. New and challenging topics.

Instructor Comments

Instructor Name: Jyoti Trivedi

Sr No.	Comments
1	The entire session had no relevance and basis. the feedbacks were also vague
2	Jyoti Maam was available to help even post class sessions. She took effort to find and fix meetings with various people who had a deeper knowledge of the subject which was really helpful. However, sometimes the concepts could not be communicated in detail. There is a scope of improvement in explaining the concepts with practical examples to the students. She tried to make the sessions interactive which was great.
3	She is good in areas like managing guest lectures and stuffs like that. She is good when it comes to interactions but lacks the knowledge about financial and environmental assessment, which she taught us. We were left alone to guess what is what. We were not clear about the linkages between type of contract to choose and financial figures that are important to make our project viable. Till the very end we were working on our finance part as the finance professor was not punctual and failed to complete his course. We can't say that we are clear when she tries to clarify our doubts. We end up confused.
4	Prof. Jyoti Trivedi is a good faculty but she lacks sound knowledge. We hope to see a better faculty in coming semester
5	The professor did not seem well versed with enough knowledge about the studio. There was a clear lack in information as was expected and required from the studio course.
6	Sessions were not well planned. Deliverables and assignments were given on the last day due to which we couldn't work on the topics critically and inferior quality of work was resulted.
7	Very positive approach but financial part could be more accurate if it was taught properly. Looking forward to learn in further semesters. Thanks madam for the guidance.
8	She helps students interacting with each other by giving some assignments based on some case studies which a unique way of teaching. Overall experience was very good.
9	Probably should look into the projects more regularly.

1	good
2	This course is one of the prime course and subject that needs to be taught to a MCEM student. The way the course was conducted was not at all satisfactory. The course was not completed and a lot of sessions were skipped. The course was outlined differently and in the middle the course the outline was changed and was linked to studio work. Though the thought to link the course and teach Financial Analysis on a practical project was a good idea but it could not be executed properly resulting in zero gains from the subject except a few basic concepts which one could have surfed on net and learnt as well. If one needs to be a part of the Big4 one needs to be clear of this subject and hence maybe there is a need for this course to be much more well structured and deeply taught.
3	The course is undoubtedly good for CEM students but the professor was unable to complete the course.
4	The course was a mandatory for understanding the financial market of our country but it was'nt linked well enough in order to understand in our field.
5	A very average course with no clarity on the purpose or intent. Apart from NPV and IRR calculations the relevance to core studio was completely missing. Information about stock markets and companies didn't seem to make any sort of understanding as far as relevance to the overall course goes.
6	This is a very crucial subject for the program and it shall be checked if all the topics are covered on time since the subject is linked with the Studio subject also.
7	Subject could have been more interesting if course outline was followed.
8	Should concentrate more on finance aspect than accounting.

Instructor Comments

Instructor Name: Mobin Shaikh

Sr No.	Comments
1	Needs to be on time for classes
2	A lot of lectures were cancelled because of delay and the course hours were not completed. The course was conducted in an unprofessional manner without valuing students time. Though the instructor was well versed with the subject and clear in his concepts and communicated the same really well. However, since there was always a hurry because of lack of time, nothing could be grasped completely and needed a lot of extra effort and help from internet and seniors to clear the concepts. The instructor lacked detail knowledge of Finances in Construction Projects and could not manage to handle the studio projects. Only the presentation and notes given by the instructor were helpful.
3	He was never punctual. The reasons are not important for us as he has failed in his commitment of completing the course. Program coordinator should change this faculty as he is unable to come to the college on time and has not taught us finance part.
4	Prof. Mobin Shaikh was not able to deliver the course contents which were required for our project. We were taught in general and depth of knowledge required to carry out financial analysis of the project was lacked. We were unable to implement the methods taught in class to the actual project and calculations.
5	There was very poor preparation for the course on behalf of the professor. Classes were not held according to stipulated schedule throughout the course. Make up classes were further scheduled frequently leading to disturbance in overall course work time.
6	the initial portion of accounts and book keeping seems to be a strong point of the faculty and the faculty seems to be comfortable with it. but it should be brought to notice of the management that the finance portion of the course was not covered effectively. the timeliness of the course was not much and should be considered unsatisfactory. conceptual knowledge and capacity to apply could be maintained in the students if the faculty could put in some more efforts. also the rescheduling of classes without having consideration regarding students' schedule and their curriculum should be restricted. if the timing of lecture hours is not satisfactory , they should be reconsidered because the irregularity in lectures costs a lot on student's side.
7	Poor time punctuality and sometimes faculty didnt turn up for class. No feedback given on assignment. Subject could have been more interesting if course outline could be followed. Some of the major topics were missed out and that has affected studio works.
8	He has more knowledge of Accounting and because of that we did not get to learn more about NPV and IRR and finance that is related to construction. Lot of concepts were not being cleared. There is no need of this subject if only accounting fundamentals are there to learn.
9	Should be more punctual. Ineffective communication due to limited number of classes.

Course Comments

Sr No.	Comments
1	When the course outline was given it was originally said that they would teach us the software. Giving examples of real life and applying them in life-like situations did happen during the course because she assigned one project to each group but in the end I haven't been able to learn much about the software. Software was rushed through over the semester.
2	MS Project is a good tool for scheduling, monitoring and controlling a project and therefore one must learn it. The basics of the course were ran very rapidly considering students are aware about the tool. I learned new things but from you tube. She was always in hurry and her expectations were high.
3	The course helped me to get the a good knowledge on the software skills.
4	the course curriculum is well designed and helpful in understanding the aspects of the software .
5	Excellent
6	the subject was really interesting and useful to develop practical sense of the outside world
7	Was informative and helpful.
8	The course was really good and it has helped me in understanding the ms project.

Instructor Comments

Instructor Name: Jyoti Trivedi

Sr No.	Comments
1	The software is an interesting tool to manage activities. However, the software was not taught properly and at the end of the semester I feel that I don't have a sufficient understanding of the software. For students who are not from Technology, it became a task to understand the basic project and then added to it understand the software.
2	She was good in teaching MS Project but as I mentioned above, she was in hurry all the time and she had assumptions that we are aware of MS Project and there is no need of going into details. But she managed the course well and finished it on time.
3	Prof. Jyoti Trivedi helped us to get a brief knowledge about the MSP software. We could have learned more functions than what was actually taught.
4	although overall experience was nice with the faculty , the main lacking discovered was that it became hard sometime to grasp the knowledge as it was delivered in an abstract manner. the faculty needs to put some extra efforts in order to help students grasp the course in an effective manner. the approach of working on an ongoing project is appreciable. but one improvement required for the instructor is to make necessary attempts to convey sufficient amount of knowledge to the students first. if the faculty expects students to perform at a certain degree , they need to teach the aspects covered satisfactorily first.
5	Only thing to look upon is that basic fundamentals should be cleared to all the students as they are coming from different fields. They might not be aware of the all the fundamentals of Construction management tools. So proper time should be given to the earlier sessions.
6	Excellent
7	Excellent teaching. Very Punctual. On the spot doubt solving. Personal attention. Really good nature of Mam. Enjoyed and learnt a lot form this course..!!
8	faculty was quite helpful in making understand concept. Somehow could have been more helpful if the pace of teaching was lowered a bit.
9	Jyotimam has taught us great regarding the subject.

Course Comments

Sr No.	Comments
1	Excellent
2	Excellent studio course. Helped gain practical knowledge about the subject. Cleared basic concept Lacked theoretical sessions which were supposed to be a part of the studio course.
3	There should be different subjects for RCC design and Steel structure Design.
4	excellent idea
5	the course was very interesting but the amount of repetitive work levied upon was too much , moreover the guidance provided by the internal faculties were not up to the mark as expected prior to the starting . the time planning of giving us the work was not good . we weren't told the quality and the type of work that was expected from us until the 60% of the semester was over that brought a lot of work pressure at the end of the semester to meet up the expectation of the college that effected the grades
6	Good
7	The studio was taught without any prior teaching of the theory it needed. It would have been helpful of the instructors taught theory alongside practical aspects of the studio.
8	This Studio was very well structured in terms of the practical problem. But, in the 1st semester it is very important to focus on theory portion. Which was not very well covered in the semester. when we told them we got the answer that, "we are not here for the SPOON FEEDING ". But, it is not spoon feeding. We were given in our studio problem for design of some special feature which was very good. But, same time if we don't know some basic concepts, then it will not help us in long time. Actually till the last year system was perfect that studio have 3 credits and theory subjects were covered individually. but, this year credit was increased to 9 but we did the same problem which were covered in 3 credit studio. But, we missed our theory concepts. Although all core faculties and visiting faculties are excellent . But, we found to much difficulties in connecting the studio problem with some theories. So, I strongly recommend you to change the system as earlier as Studio with 3 credits and theory subjects individual.
9	Theoretical concept of the studio subject must be briefed properly.
10	As the selection process was based on aptitude test only there are complete chances of students having great variation in context with their technical knowledge. No one is on same level in context with concepts. So it becomes a duty of the university to teach accordingly. Second thing, everyone of us were given different problems so that if there are 24 people in class we can discuss 24 problems and hence enhance our range of understanding, but I do not feel anything like this ever happened. Many of us were so involved with our own problem statements that except that could not learn anything which again is very obvious. Some of the students were given special structures, but I think firstly basics are required to be taught.

Instructor Comments

Instructor Name: Mehul Shah

Sr No.	Comments
1	Excellent
2	Excellent knowledge. Efficient way of teaching.
3	superb knowledge and excellent practical experience.
4	the faculty is really full of knowledge , excellent conceptual as well as field knowledge , the way he interlinked the concepts with the practice done in the outside world was really great
5	Good
6	He has a excellent knowledge of the field and special thing his how way of teaching and lead to the solution of a student's problem is excellent.
7	Must clear out curriculum to students early enough so that they get enough preparation time.
8	A very intelligent person, no doubt. But along with this for a professor there is a necessity to be able to relate himself with students. His teaching of concepts is so much disperse that it becomes difficult to create link between them. Most of the students do not meet his expectations that can be sensed in his behavior toward them. May be an excellent structural engineer but definitely not an excellent teacher.

■ **Course Average(COR AVG):** This is the average of the total responses for this course. For example, for Studio IV, out of total 32 students 28 have responded, the Average represents the mean of all 28 responses.

■ **Individual Average(IND AVG):** This is the average score of the total responses for this instructor. For example, for Studio IV, out of total 32 students 28 have responded, the Average represents the mean of all 28 responses.

■ **Faculty Average(FAC AVG):** This is the average of all responses for similar course type within the Faculty. For example, Faculty average of Studio IV offered by FA, represents the mean of all responses for Studio courses offered in FA during the given semester.

Scale : 1-3: Unsatisfactory, 4-6: Average, 7-8: Good, 9: Very Good, 10: Excellent

Course Comments

Sr No.	Comments
1	Excellent
2	Excellent studio course. Helped gain practical knowledge about the subject. Cleared basic concept Lacked theoretical sessions which were supposed to be a part of the studio course.
3	There should be different subjects for RCC design and Steel structure Design.
4	excellent idea
5	the course was very interesting but the amount of repetitive work levied upon was too much , moreover the guidance provided by the internal faculties were not up to the mark as expected prior to the starting . the time planning of giving us the work was not good . we weren't told the quality and the type of work that was expected from us until the 60% of the semester was over that brought a lot of work pressure at the end of the semester to meet up the expectation of the college that effected the grades
6	Good
7	The studio was taught without any prior teaching of the theory it needed. It would have been helpful of the instructors taught theory alongside practical aspects of the studio.
8	This Studio was very well structured in terms of the practical problem. But, in the 1st semester it is very important to focus on theory portion. Which was not very well covered in the semester. when we told them we got the answer that, "we are not here for the SPOON FEEDING ". But, it is not spoon feeding. We were given in our studio problem for design of some special feature which was very good. But, same time if we don't know some basic concepts, then it will not help us in long time. Actually till the last year system was perfect that studio have 3 credits and theory subjects were covered individually. but, this year credit was increased to 9 but we did the same problem which were covered in 3 credit studio. But, we missed our theory concepts. Although all core faculties and visiting faculties are excellent . But, we found to much difficulties in connecting the studio problem with some theories. So, I strongly recommend you to change the system as earlier as Studio with 3 credits and theory subjects individual.
9	Theoretical concept of the studio subject must be briefed properly.
10	As the selection process was based on aptitude test only there are complete chances of students having great variation in context with their technical knowledge. No one is on same level in context with concepts. So it becomes a duty of the university to teach accordingly. Second thing, everyone of us were given different problems so that if there are 24 people in class we can discuss 24 problems and hence enhance our range of understanding, but I do not feel anything like this ever happened. Many of us were so involved with our own problem statements that except that could not learn anything which again is very obvious. Some of the students were given special structures, but I think firstly basics are required to be taught.

Instructor Comments

Instructor Name: Aanal Shah

Sr No.	Comments
1	Excellent
2	Good teaching skills. Excellent doubt solving.
3	Good
4	Must focus on concepts rather than the methodology for solving problems.
5	Every time you can not say go to library and find books. Just think what if the things we are interpreting by reading goes wrong, a student need guidance. Overall a nice person.

1	nice course
2	Good curriculum to understand basic principals of graph theory.
3	Useless Subject, all used to come for the attendance only. What we thought and what we got, totally different. One point is outside the box and on is inside if they are connected by line then they are connected graphs. these theorem we learned in one lecture. sir repeated for 6 times and that was course. This subject not deserves to be in CEPT. it doesn't match cept level.
4	good
5	this course was something new and has met all my expectations.
6	good course.

Instructor Comments

Instructor Name: Jimmy Sethna

Sr No.	Comments
1	The course needs more discipline, and preferably a lower number of students. However, the classes were fun!
2	nice sir
3	Excellent way of teaching with problem-based solutions and interactive questions.
4	jimmy sir was always eager to solve the doubts
5	has been helpful and has always cleared students query's and doubts.
6	good teacher.

Instructor Comments

Instructor Name: Darshana Rawal

Sr No.	Comments
1	Darshana mam have a good knowledge o GIS but her teaching and communicating skill toward the students is not good, she teaches too fast especially when she is showing the practical works in GIS. I think mam should slow down her pace while she is teaching because GIS is a new software to most of the students in CEPT. Beside that mam is very helpful and co-operative to students.
2	Should cover more practical concepts related to planning.

Course Comments

Sr No.	Comments
1	It is a must learn 'language' for engineers and architects.
2	Only thing is it seemed to work too fast. I know that the course was meant to cover all the essentials of C++, however, that form of participation was missing from colleagues in the class.
3	The course was well structured.
4	Course was not structured properly. Course contents were completed.
5	The course was good but there is one slight complain not only by me but by many students about the course, if the course name is start programming in C++ then the course should be like on basic level, the course was taught like on high level and the basics was not taught enough.

Instructor Comments

Instructor Name: Rashmin Damle

Sr No.	Comments
1	He posses very good knowledge about c++. I am glad to have a good learning experience from him.
2	Overall a good course but I feel people seemed less interested in pursuing C++
3	He teaches well.
4	Rashmin sir has taught us really good but the basics was not taught enough.

Course Comments

Sr No.	Comments
1	This course helped me to understand the concepts related to research in more depth. It also helped to understand the skills needed for writing research papers. I was able to define the scope of my thesis due to this course. The research techniques learned, will certainly help for my future work.
2	The course was very effective and beneficial to me in order to think about my thesis project and build a strong foundation for it. The subject helped in clarifying basics of how to write proposals and further prepare the documents. Helped in finalising the thesis schedule. Also, discussion with sanyogita mam helped in the gaining a clear picture of what is to be done at different stages. Should be repeated for the upcoming batches.

1	The instructor had immense knowledge about the subject and was very effective in communicating the concepts. She encouraged critical thinking and cleared doubts from time to time.

COURSE TITLE : Research Methods

COURSE CODE : 9909

COURSE TYPE : Lecture

NO OF STUDENTS : 7

FACULTY : Faculty of Technology

NO OF RESPONDENTS : 7

INSTRUCTOR NAME: Saket Sarraf

NO OF RESPONDENTS : 7

STUDENTS REGISTERED BY FACULTY

Name Of Faculty	FA	FD	FM	FP	FT	Total
No. of Students	2	0	0	5	0	7
Percentage(%)	29	0	0	71	0	100%

■ **Course Average(COR AVG):** This is the average of the total responses for this course. For example, for Studio IV, out of total 32 students 28 have responded, the Average represents the mean of all 28 responses.

■ **Individual Average(IND AVG):** This is the average score of the total responses for this instructor. For example, for Studio IV, out of total 32 students 28 have responded, the Average represents the mean of all 28 responses.

■ **Faculty Average(FAC AVG):** This is the average of all responses for similar course type within the Faculty. For example, Faculty average of Studio IV offered by FA, represents the mean of all responses for Studio courses offered in FA during the given semester.

Scale : 1-3: Unsatisfactory, 4-6: Average, 7-8: Good, 9: Very Good, 10: Excellent

Course Comments

1	This course was really good. It could have been offered as a stand-alone full credits course, instead of offering it as the standby course.
2	Research method courses should be designed and offered separately for the doctoral students. It should not be merged with the master's students as their learning objective, pedagogy and application is different from that of doctoral students. The quantitative part was too rushed. We could not get time to clear our concepts and discuss its application and relevance for our research. The qualitative part was compromised too as instructor had to be changed at the last moment. It would have been relevant if the course was designed for the doctoral students.
3	This course consisted of two different parts: 8 sessions for quantitative and 5 sessions for qualitative. These sessions are certainly not enough for Doctoral student's coursework. I had joined this Doctoral program believing what is given in the coursework outline on the CEPT website. There courses in Basic quantitative and a course on Research Design and methods have to be taken up by students in 2 consecutive semesters. I think combining the courses in one semester was not favourable for the students. Also the restructuring of the coursework, if happening, needs to be discussed and communicated to them beforehand. The number of sessions allotted to Prof. Saket Sarraf were especially frugal.

1	An encouraging and meticulous teacher. Need to be involved more hands on in the doctoral program. The designed exercise was useful for understanding qualitative research approaches, methods and methodology.
2	The number of sessions were not enough to be able to cultivate critical thinking and give proper feedback for the assignments also.

1	I appreciate the way Dr. Bhargav discussed the probability and correlation part individually with doctoral students. It gave confidence and clarity about the topic. If possible, other topics should be dealt in the same way.
2	Here again there was not enough time available with the instructor to drive home the concepts properly and encourage critical thinking. The topics came and went like hurricanes.
