

# CONNECT PORTAL INTEGRATION DOCS

The new Craft CMS powered CEPT website will pull in information about People from the CEPT Connect Portal. This document describes the workflow as well as the integration requirements for the same.

## Glossary

|                        |                                                                                                                                    |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| Craft / CMS / website  | <i>Craft CMS based public university website. In development as of May 2025.</i>                                                   |
| People / Person        | <i>Faculty Members, Staff, Tutors, (Students?) and any other people profiles to be displayed on the public university website.</i> |
| Relations / Tags       | <i>Programs, Faculties, Offices, Research Areas, and Practices that are tagged with a Person's profile</i>                         |
| Legacy CEPT website    | <i>Outgoing (current as of May 2025) version of the CEPT university public website.</i>                                            |
| One-time import fields | <i>Related Faculties, and Related Programs fields on People profiles.</i>                                                          |

## Assumptions

- CEPT Connect Portal will be treated as the canonical source of truth for information about Faculty Members, Staff and Tutors.
- In case of a conflict, the version from CEPT Connect Portal will preside and overwrite the version inside Craft, even if the edits inside Craft might be newer.
- The only exception to points 1 & 2 will be content for the following *One-time import* fields, where the version inside Craft will be considered the canonical source of truth:
  - Related Faculties
  - Related Programs

# SYNC WORKFLOW

1. All content edits for People profiles are made on the CEPT Connect Portal.
2. Craft will pull-in content from CEPT Connect for *all People profiles* at regular time intervals (either once a day, or more frequently) and use that as the latest version of the data.
  1. This means, any edits made to People profiles locally inside Craft *will* get overwritten during the regular sync.
  2. Exceptions will be for the One-time import fields.
3. The content of *One-time import* fields will only be copied over to Craft the first time that a new Person profile is created in Craft. Subsequent regular syncs will treat the data inside Craft as canonical for this subset of fields and not overwrite its contents.
4. There will be a set of shared foreign keys for identifying shared tags between Craft and CEPT Connect Portal. These keys must uniquely identify the canonical version of the following content types on both Craft as well as CEPT Connect Portal:
  1. Programs
  2. Faculties
  3. Offices
  4. Research Areas
  5. Practices
5. For all relational Tags on a Person's profile, Craft will look for the specified foreign key in the relevant content type. If a match is found, then the Profile will be tagged with the same item in Craft as well. If a match is not found:
  1. For *Programs, Faculties, or Offices*: no new items will be ever created on Craft by the sync process. Any items where the foreign key does not match will be silently ignored during the sync process.
  2. For *Research Areas, and Practices*: new items will be created if a match is not found by the sync process. However, there will be no further sync updates to that tag once it has been created inside Craft.

# SPECIFICATION

## Format

---

- JSON API endpoint
- Paginated: max 100 items per page

## Example

---

```

# FIELDS

The **\*** character indicates the field is required (on the Connect Portal).

*Simple HTML* may contain the following tags: **<p>**, **<i>**, **<em>**, **<strong>**, **<b>**, **<a>**.

*Rich HTML* may contain everything in Simple HTML, as well as the following additional tags: **<h3>**, **<h4>**, **<blockquote>**, **<ul>**, **<ol>**, **<li>**.

## Common

| Field                        | Data Type     | Description                                                                                                                     |
|------------------------------|---------------|---------------------------------------------------------------------------------------------------------------------------------|
| data *                       | Objects Array |                                                                                                                                 |
| data[id].id *                | String        | Unique identifier inside the CEPT Connect Portal for this profile.                                                              |
| data[id].dateCreated         | Datetime      | Time when the Person profile was created.                                                                                       |
| data[id].dateUpdated *       | Datetime      | Time when the Person profile was last updated.                                                                                  |
| data[id].enabled *           | Boolean       | <b>true</b> if the Person profile should be active on the Craft site.                                                           |
| data[id].title *             | String        | Full Name of the Person                                                                                                         |
| data[id].referredToAs        | String        | Typically the Person's first name.                                                                                              |
| data[id].designation         | String        | Comma separated list of designations. Eg: <b>PhD Student</b> for a student, or <b>Dean, Professor</b> for a Tutor.              |
| data[id].introduction        | Simple HTML   | One para bio of the person.                                                                                                     |
| data[id].bio                 | Rich HTML     | Detailed bio of the person.                                                                                                     |
| data[id].isAlumni            | Boolean       | <b>true</b> if the person is no longer an active CEPT member.                                                                   |
| data[id].roles *             | Array         | List of roles ( <b>student, faculty, staff, ambassador</b> ) held by the person. One person can be assigned more than one role. |
| data[id].image               | Object        |                                                                                                                                 |
| data[id].image.url           | URL           | URL of the Person's photo                                                                                                       |
| data[id].image.filename      | String        | Filename of the photo in the URL                                                                                                |
| data[id].contact             | Objects Array |                                                                                                                                 |
| data[id].contact[.email]     | URL           | Email link (eg: <b>mailto:hello@example.com</b> )                                                                               |
| data[id].contact[.phone]     | URL           | Phone link (eg: <b>tel:+918320083200</b> )                                                                                      |
| data[id].contact[.website]   | URL           | Personal website link                                                                                                           |
| data[id].contact[.bluesky]   | URL           | BlueSky profile link                                                                                                            |
| data[id].contact[.facebook]  | URL           | Facebook profile link                                                                                                           |
| data[id].contact[.instagram] | URL           | Instagram profile link                                                                                                          |
| data[id].contact[.linkedin]  | URL           | LinkedIn profile link                                                                                                           |
| data[id].contact[.mastodon]  | URL           | Mastodon profile link                                                                                                           |
| data[id].contact[.substack]  | URL           | Substack profile link                                                                                                           |
| data[id].contact[.tiktok]    | URL           | TikTok profile link                                                                                                             |
| data[id].contact[.whatsapp]  | URL           | WhatsApp link (eg: <b>https://wa.me/918320083200</b> )                                                                          |
| data[id].contact[.x]         | URL           | X (Twitter) profile link                                                                                                        |
| data[id].contact[.youtube]   | URL           | YouTube link                                                                                                                    |
| data[id].legacyUrl           | URL           | URL of the profile on the legacy CEPT website                                                                                   |

### Common (cont.)

| Field                          | Data Type    | Description                                 |
|--------------------------------|--------------|---------------------------------------------|
| meta *                         | Object       |                                             |
| meta.pagination *              | Object       |                                             |
| meta.pagination.total *        | Unsigned Int | Total number of items                       |
| meta.pagination.count *        | Unsigned Int | Number of items in current response         |
| meta.pagination.per_page *     | Unsigned Int | Number of items per page (recommended: 100) |
| meta.pagination.current_page * | Unsigned Int | Current page number                         |
| meta.pagination.total_pages *  | Unsigned Int | Total number of pages                       |
| meta.pagination.links *        | Object       |                                             |
| meta.pagination.links.next *   | URL          | URL of the next page                        |
| meta.pagination.links.previous | URL          | URL of the previous page                    |

### Role: Faculty Members / Tutors

| Field                             | Data Type     | Description                                                                |
|-----------------------------------|---------------|----------------------------------------------------------------------------|
| data[].tutorType                  | String        | One of <b>facultyMember</b> or <b>studioTutor</b>                          |
| data[].expertiseAreas             | Rich HTML     | List of Areas of Expertise                                                 |
| data[].coursesList                | Objects Array |                                                                            |
| data[].coursesList[].title        | String        | Title of the course                                                        |
| data[].coursesList[].semester     | String        | Semester when it was taught (eg: <b>M-2023</b> )                           |
| data[].researchPapers             | Objects Array |                                                                            |
| data[].researchPapers[].title     | String        | Title of paper                                                             |
| data[].researchPapers[].authors   | String        | Comma separated list of authors                                            |
| data[].researchPapers[].publisher | String        | Event or conference where the paper was presented                          |
| data[].researchPapers[].type      | String        | Eg: <b>Journal Paper</b> or <b>Conference Paper</b> or <b>Book Chapter</b> |
| data[].faculties                  | Objects Array | Related Faculties                                                          |
| data[].faculties[].title          | String        | Name of the Faculty                                                        |
| data[].faculties[].foreignKey     | String        | Unique Foreign Key identifier for the Faculty                              |
| data[].programs                   | Objects Array | Related Programs                                                           |
| data[].programs[].title           | String        | Name of the Program                                                        |
| data[].programs[].foreignKey      | String        | Unique Foreign Key identifier for the Program                              |
| data[].researchAreas              | Objects Array | Related Research Areas                                                     |
| data[].researchAreas[].title      | String        | Name of the Research Area                                                  |
| data[].researchAreas[].foreignKey | String        | Unique Foreign Key identifier for the Research Area                        |

*Role: Faculty Members / Tutors (cont.)*

| Field                         | Data Type     | Description                                    |
|-------------------------------|---------------|------------------------------------------------|
| data[].practices              | Objects Array | Related Practices                              |
| data[].practices[].title      | String        | Name of the Practice                           |
| data[].practices[].foreignKey | String        | Unique Foreign Key identifier for the Practice |

*Role: Staff*

| Field                             | Data Type     | Description                                         |
|-----------------------------------|---------------|-----------------------------------------------------|
| data[].offices                    | Objects Array | Related Offices                                     |
| data[].offices[].title            | String        | Name of the Office                                  |
| data[].offices[].foreignKey       | String        | Unique Foreign Key identifier for the Office        |
| data[].researchAreas              | Objects Array | Related Research Areas                              |
| data[].researchAreas[].title      | String        | Name of the Research Area                           |
| data[].researchAreas[].foreignKey | String        | Unique Foreign Key identifier for the Research Area |
| data[].practices                  | Objects Array | Related Practices                                   |
| data[].practices[].title          | String        | Name of the Practice                                |
| data[].practices[].foreignKey     | String        | Unique Foreign Key identifier for the Practice      |

*Role: Student*

| Field                             | Data Type     | Description                                         |
|-----------------------------------|---------------|-----------------------------------------------------|
| data[].faculties                  | Objects Array | Related Faculties                                   |
| data[].faculties[].title          | String        | Name of the Faculty                                 |
| data[].faculties[].foreignKey     | String        | Unique Foreign Key identifier for the Faculty       |
| data[].programs                   | Objects Array | Related Programs                                    |
| data[].programs[].title           | String        | Name of the Program                                 |
| data[].programs[].foreignKey      | String        | Unique Foreign Key identifier for the Program       |
| data[].researchAreas              | Objects Array | Related Research Areas                              |
| data[].researchAreas[].title      | String        | Name of the Research Area                           |
| data[].researchAreas[].foreignKey | String        | Unique Foreign Key identifier for the Research Area |
| data[].practices                  | Objects Array | Related Practices                                   |
| data[].practices[].title          | String        | Name of the Practice                                |
| data[].practices[].foreignKey     | String        | Unique Foreign Key identifier for the Practice      |

## AUTHENTICATION

Basic HTTP auth over SSL (HTTPS) should be used to authenticate and validate authorised usage by Craft. Alternatively, an API key header can also be supplied with each request in order to authenticate the request.
